# Modification Record

Version 0.1	Jan. 16, 2007	- First release
Ver.0.1.01	Mar. 15, 2007	- Adjusted the layout of tables.
Version 1.0.0	Apr. 27, 2007	Version 1.0.0 release.
Version 1.0.1	May. 30, 2008	Version 1.0.1 release TS-3-1-3 removed from Test Profile.
Ver.1.1.0	Dec. 12, 2008	Major revision up. (No modification)
Ver.2.0.0	Nov. 27, 2009	- Separated from Server Test item priority. - Modified contents for the new test categories.

# Acknowledgement

IPv6 Forum would like to acknowledge the efforts of the following organizations and commentators in the development of this test specification.

- IPv6 Promotion Council

# 1. Overview

This document describes the SIP IPv6 functions and the functional classifications for SIP IPv6 Server (Proxy and Registrar) on the basis of the classifications given in section 2.

**Table 1-1 The description of Test item priority Table**

Item	Explanation
No	The name of RFC, section number, sequence number in the section.
RFC Section	The number of the section in the RFC where the sentence is described.
RFC Section Title	The title of section where the sentence is described.
Functional Specification	The whole sentence that include a keyword, such as 'MUST', 'SHOULD', 'RECOMMENDED', 'MUST NOT', 'SHOULD NOT', 'NOT RECOMMENDED.'
RFC Status	The keyword that the sentence includes: 'MUST', 'SHOULD', 'RECOMMENDED', 'MUST NOT', 'SHOULD NOT', 'NOT RECOMMENDED.'
Test Priority	The priority based on the importance of interoperability. There are four categories: BASIC, ADVANCED, NOT REQUIRED, OUT OF SCOPE.
Test Profile	The test profile that is referred to in the test.

## 2. Reference Standards

- (1) RFC3261: SIP: Session Initiation Protocol (<http://www.ietf.org/rfc/rfc3261.txt>)
- (2) RFC3264: An Offer/Answer Model with Session Description Protocol  
(<http://www.ietf.org/rfc/rfc3264.txt>)
- (3) RFC4566: SDP: Session Description Protocol (<http://www.ietf.org/rfc/rfc4566.txt>)
- (4) RFC2617: HTTP Authentication: Basic and Digest Access Authentication  
(<http://www.ietf.org/rfc/rfc2617.txt>)
- (5) RFC3665: SIP Basic Call Flow Examples (<http://www.ietf.org/rfc/rfc3665.txt>)
- (6) IPv6 Ready Logo Phase 2 Policy
- (7) SIP IPv6 Test Scope

### 3. Test item priority for SIP Proxy Server

This section described the Test item priority for SIP Proxy Server.

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-7-1	7	SIP Messages	The start-line, each message-header line, and the empty line <b>MUST</b> be terminated by a carriage-return line-feed sequence (CRLF).	MUST	BASIC	generic_message
RFC3261-7-2			Note that the empty line <b>MUST</b> be present even if the message-body is not.	MUST	BASIC	generic_message
RFC3261-7-3	7.1	Requests	The Request-URI <b>MUST NOT</b> contain unescaped spaces or control characters and <b>MUST NOT</b> be enclosed in "<>".	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-7-4				MUST NOT	BASIC	generic_make_ACK_for-non2XX
RFC3261-7-5			To be compliant with this specification, applications sending SIP messages <b>MUST</b> include a SIP-Version of "SIP/2.0".	MUST	BASIC	generic_message
RFC3261-7-6			The SIP-Version string is case-insensitive, but implementations <b>MUST</b> send upper-case.	MUST	BASIC	generic_message
RFC3261-7-7	7.3.1	Header Field Format	However, it is <b>RECOMMENDED</b> that header fields which are needed for proxy processing (Via, Route, Record-Route, Proxy-Require, Max-Forwards, and Proxy-Authorization, for example) appear towards the top of the message to facilitate rapid parsing.	RECOMMENDED	BASIC	generic_message
RFC3261-7-8			It <b>MUST</b> be possible to combine the multiple header field rows into one "field-name: field-value" pair, without changing the semantics of the message, by appending each subsequent field-value to the first, each separated by a comma.	MUST	OUT OF SCOPE	
RFC3261-7-9			Multiple header field rows with these names <b>MAY</b> be present in a message, but since their grammar does not follow the general form listed in Section 7.3, they <b>MUST NOT</b> be combined into a single header field row.	MUST NOT	BASIC	[tester]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-7-10			Implementations <b>MUST</b> be able to process multiple header field rows with the same name in any combination of the single-value-per-line or comma-separated value forms.	MUST	OUT OF SCOPE	
RFC3261-7-11			Even though an arbitrary number of parameter pairs may be attached to a header field value, any given parameter-name <b>MUST NOT</b> appear more than once.	MUST NOT	OUT OF SCOPE	
RFC3261-7-12	7.3.2	Header Field Classification	If a header field appears in a message not matching its category (such as a request header field in a response), it <b>MUST</b> be ignored.	MUST	BASIC	RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-7-13	7.3.3	Compact Form	Implementations <b>MUST</b> accept both the long and short forms of each header name.	MUST	NOT REQUIRED	
RFC3261-7-14	7.4.1	Message Body Type	The Internet media type of the message body <b>MUST</b> be given by the Content-Type header field.	MUST	NOT REQUIRED	[UA test]
RFC3261-7-15			If the body has undergone any encoding such as compression, then this <b>MUST</b> be indicated by the Content-Encoding header field; otherwise, Content-Encoding <b>MUST</b> be omitted.	MUST	NOT REQUIRED	
RFC3261-7-16				MUST	NOT REQUIRED	
RFC3261-7-17			Implementations that send requests containing multipart message bodies <b>MUST</b> send a session description as a non-multipart message body if the remote implementation requests this through an Accept header field that does not contain multipart.	MUST	NOT REQUIRED	
RFC3261-7-18	7.4.2	Message Body Length	The "chunked" transfer encoding of HTTP/1.1 <b>MUST NOT</b> be used for SIP.	MUST NOT	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-7-19	7.5	Framing SIP Messages	Implementations processing SIP messages over stream-oriented transports <b>MUST</b> ignore any CRLF appearing before the start-line [H4.1].	MUST	NOT REQUIRED	
RFC3261-8-1	8.1.1	Generating the Request	A valid SIP request formulated by a UAC <b>MUST</b> , at a minimum, contain the following header fields: To, From, CSeq, Call-ID, Max-Forwards, and Via; all of these header fields are mandatory in all SIP requests.	MUST	BASIC	generic_make_ACK_for-non2XX generic_make_CANCEL
RFC3261-8-2	8.1.1.1	Request-URI	The initial Request-URI of the message <b>SHOULD</b> be set to the value of the URI in the To field.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-8-3			When a provider wishes to configure a UA with an outbound proxy, it is <b>RECOMMENDED</b> that this be done by providing it with a pre-existing route set with a single URI, that of the outbound proxy.	RECOMMENDED	NOT REQUIRED	
RFC3261-8-4			When a pre-existing route set is present, the procedures for populating the Request-URI and Route header field detailed in Section 12.2.1.1 <b>MUST</b> be followed (even though there is no dialog), using the desired Request-URI as the remote target URI.	MUST	NOT REQUIRED	
RFC3261-8-5	8.1.1.2	To	All SIP implementations <b>MUST</b> support the SIP URI scheme.	MUST	BASIC	[tester]
RFC3261-8-6			Any implementation that supports TLS <b>MUST</b> support the SIPS URI scheme.	MUST	NOT REQUIRED	
RFC3261-8-7			A request outside of a dialog <b>MUST NOT</b> contain a To tag; the tag in the To field of a request identifies the peer of the dialog.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-8-8	8.1.1.3	From	A UAC <b>SHOULD</b> use the display name "Anonymous", along with a syntactically correct, but otherwise meaningless URI (like sip:thisis@anonymous.invalid), if the identity of the client is to remain hidden.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-9			The From field <b>MUST</b> contain a new "tag" parameter, chosen by the UAC.	MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-8-10	8.1.1.4	Call-ID	It <b>MUST</b> be the same for all requests and responses sent by either UA in a dialog.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-11			It <b>SHOULD</b> be the same in each registration from a UA.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-8-12			In a new request created by a UAC outside of any dialog, the Call-ID header field <b>MUST</b> be selected by the UAC as a globally unique identifier over space and time unless overridden by method-specific behavior.	MUST	BASIC	[UA test]
RFC3261-8-13			Use of cryptographically random identifiers (RFC 1750 [12]) in the generation of Call-IDs is <b>RECOMMENDED</b> .	RECOMMENDED	OUT OF SCOPE	
RFC3261-8-14	8.1.1.5	CSeq	The method <b>MUST</b> match that of the request.	MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-8-15			The sequence number value <b>MUST</b> be expressible as a 32-bit unsigned integer and <b>MUST</b> be less than 2**31.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-16				MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-8-17	8.1.1.6	Max-Forwards	A UAC <b>MUST</b> insert a Max-Forwards header field into each request it originates with a value that <b>SHOULD</b> be 70.	MUST	BASIC	generic_make_ACK_for-non2XX

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-18				SHOULD	NOT REQUIRED	[UA test]
RFC3261-8-19	8.1.1.7	Via	When the UAC creates a request, it <b>MUST</b> insert a Via into that request.	MUST	BASIC	[UA test]
RFC3261-8-20			The protocol name and protocol version in the header field <b>MUST</b> be SIP and 2.0, respectively.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-21			The Via header field value <b>MUST</b> contain a branch parameter.	MUST	BASIC	generic_status generic_make_response generic_make_response-200_for-CANCEL generic_make_CANCEL
RFC3261-8-22			The branch parameter value <b>MUST</b> be unique across space and time for all requests sent by the UA.	MUST	BASIC	generic_forward_request
RFC3261-8-23			The branch ID inserted by an element compliant with this specification <b>MUST</b> always begin with the characters "z9hG4bK".	MUST	BASIC	generic_forward_request generic_make_CANCEL
RFC3261-8-24	8.1.1.8	Contact	The Contact header field <b>MUST</b> be present and contain exactly one SIP or SIPS URI in any request that can result in the establishment of a dialog.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-25			That is, the Contact header field value contains the URI at which the UA would like to receive requests, and this URI <b>MUST</b> be valid even if used in subsequent requests outside of any dialogs.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-26			If the Request-URI or top Route header field value contains a SIPS URI, the Contact header field <b>MUST</b> contain a SIPS URI as well.	MUST	NOT REQUIRED	
RFC3261-8-27	8.1.1.9	Supported and Require	If the UAC supports extensions to SIP that can be applied by the server to the response, the UAC <b>SHOULD</b> include a Supported header field in the request listing the option tags (Section 19.2) for those extensions.	SHOULD	NOT REQUIRED	
RFC3261-8-28	The option tags listed <b>MUST</b> only refer to extensions defined in standards-track RFCs.		MUST	NOT REQUIRED	[UA test]	
RFC3261-8-29	If the UAC wishes to insist that a UAS understand an extension that the UAC will apply to the request in order to process the request, it <b>MUST</b> insert a Require header field into the request listing the option tag for that extension.		MUST	NOT REQUIRED		
RFC3261-8-30	If the UAC wishes to apply an extension to the request and insist that any proxies that are traversed understand that extension, it <b>MUST</b> insert a Proxy-Require header field into the request listing the option tag for that extension.		MUST	NOT REQUIRED		
RFC3261-8-31	As with the Supported header field, the option tags in the Require and Proxy-Require header fields <b>MUST</b> only refer to extensions defined in standards-track RFCs.		MUST	NOT REQUIRED		
RFC3261-8-32	8.1.2		Sending the Request	Unless there is local policy specifying otherwise, the destination <b>MUST</b> be determined by applying the DNS procedures described in [4] as follows.	MUST	ADVANCED
RFC3261-8-33			If the first element in the route set indicated a strict router (resulting in forming the request as described in Section 12.2.1.1), the procedures <b>MUST</b> be applied to the Request-URI of the request.	MUST	BASIC	FW-3-1-1 FW-3-1-2
RFC3261-8-34			Independent of which URI is used as input to the procedures of [4], if the Request-URI specifies a SIPS resource, the UAC <b>MUST</b> follow the procedures of [4] as if the input URI were a SIPS URI.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-35			If the Request-URI contains a SIPS URI, any alternate destinations <b>MUST</b> be contacted with TLS.	MUST	NOT REQUIRED	
RFC3261-8-36			However, that approach for configuring an outbound proxy is <b>NOT RECOMMENDED</b> ; a pre-existing route set with a single URI <b>SHOULD</b> be used instead.	RECOMMENDED	NOT REQUIRED	
RFC3261-8-37				SHOULD	NOT REQUIRED	
RFC3261-8-38			If the request contains a Route header field, the request <b>SHOULD</b> be sent to the locations derived from its topmost value, but <b>MAY</b> be sent to any server that the UA is certain will honor the Route and Request-URI policies specified in this document (as opposed to those in RFC 2543).	SHOULD	NOT REQUIRED	[UA test]
RFC3261-8-39			In particular, a UAC configured with an outbound proxy <b>SHOULD</b> attempt to send the request to the location indicated in the first Route header field value instead of adopting the policy of sending all messages to the outbound proxy.	SHOULD	NOT REQUIRED	
RFC3261-8-40			The UAC <b>SHOULD</b> follow the procedures defined in [4] for stateful elements, trying each address until a server is contacted.	SHOULD	NOT REQUIRED	
RFC3261-8-41	8.1.3.1	Transaction Layer Errors	When a timeout error is received from the transaction layer, it <b>MUST</b> be treated as if a 408 (Request Timeout) status code has been received.	MUST	BASIC	TP-2-1-1
RFC3261-8-42			If a fatal transport error is reported by the transport layer (generally, due to fatal ICMP errors in UDP or connection failures in TCP), the condition <b>MUST</b> be treated as a 503 (Service Unavailable) status code.	MUST	BASIC	TP-2-1-2

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-43	8.1.3.2	Unrecognized Responses	A UAC <b>MUST</b> treat any final response it does not recognize as being equivalent to the x00 response code of that class, and <b>MUST</b> be able to process the x00 response code for all classes.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-44				MUST	NOT REQUIRED	[UA test]
RFC3261-8-45			A UAC <b>MUST</b> treat any provisional response different than 100 that it does not recognize as 183 (Session Progress).	MUST	NOT REQUIRED	[UA test]
RFC3261-8-46			A UAC <b>MUST</b> be able to process 100 and 183 responses.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-47	8.1.3.3	Vias	If more than one Via header field value is present in a response, the UAC <b>SHOULD</b> discard the message.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-8-48	8.1.3.4	Processing 3xx Responses	Upon receipt of a redirection response (for example, a 301 response status code), clients <b>SHOULD</b> use the URI(s) in the Contact header field to formulate one or more new requests based on the redirected request.	SHOULD	NOT REQUIRED	
RFC3261-8-49			As with proxy recursion, a client processing 3xx class responses <b>MUST NOT</b> add any given URI to the target set more than once.	MUST NOT	NOT REQUIRED	
RFC3261-8-50			If the original request had a SIPS URI in the Request-URI, the client <b>MAY</b> choose to recurse to a non-SIPS URI, but <b>SHOULD</b> inform the user of the redirection to an insecure URI.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-51			Failures <b>SHOULD</b> be detected through failure response codes (codes greater than 399); for network errors the client transaction will report any transport layer failures to the transaction user.	SHOULD	NOT REQUIRED	
RFC3261-8-52			When a failure for a particular contact address is received, the client <b>SHOULD</b> try the next contact address.	SHOULD	NOT REQUIRED	
RFC3261-8-53			In order to create a request based on a contact address in a 3xx response, a UAC <b>MUST</b> copy the entire URI from the target set into the Request-URI, except for the "method-param" and "header" URI parameters (see Section 19.1.1 for a definition of these parameters).	MUST	NOT REQUIRED	
RFC3261-8-54			It is <b>RECOMMENDED</b> that the UAC reuse the same To, From, and Call-ID used in the original redirected request, but the UAC <b>MAY</b> also choose to update the Call-ID header field value for new requests, for example.	RECOMMENDED	NOT REQUIRED	
RFC3261-8-55			Finally, once the new request has been constructed, it is sent using a new client transaction, and therefore <b>MUST</b> have a new branch ID in the top Via field as discussed in Section 8.1.1.7.	MUST	BASIC	generic_forward_request
RFC3261-8-56			In all other respects, requests sent upon receipt of a redirect response <b>SHOULD</b> re-use the header fields and bodies of the original request.	SHOULD	NOT REQUIRED	
RFC3261-8-57	8.1.3.5	Processing 4xx Responses	If a 401 (Unauthorized) or 407 (Proxy Authentication Required) response is received, the UAC <b>SHOULD</b> follow the authorization procedures of Section 22.2 and Section 22.3 to retry the request with credentials.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-8-58			If possible, the UAC <b>SHOULD</b> retry the request, either omitting the body or using one of a smaller length.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-8-59			The UAC <b>SHOULD</b> retry sending the request, this time only using content with types listed in the Accept header field in the response, with encodings listed in the Accept-Encoding header field in the response, and with languages listed in the Accept-Language in the response.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-60			The client <b>SHOULD</b> retry the request, this time, using a SIP URI.	SHOULD	NOT REQUIRED	
RFC3261-8-61			The UAC <b>SHOULD</b> retry the request, this time omitting any extensions listed in the Unsupported header field in the response.	SHOULD	NOT REQUIRED	
RFC3261-8-62			This new request constitutes a new transaction and <b>SHOULD</b> have the same value of the Call-ID, To, and From of the previous request, but the CSeq <b>should</b> contain a new sequence number that is one higher than the previous.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-8-63	8.2	UAS Behavior	If a request is accepted, all state changes associated with it <b>MUST</b> be performed.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-64			If it is rejected, all state changes <b>MUST NOT</b> be performed.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-8-65			UASs <b>SHOULD</b> process the requests in the order of the steps that follow in this section (that is, starting with authentication, then inspecting the method, the header fields, and so on throughout the remainder of this section).	SHOULD	NOT REQUIRED	
RFC3261-8-66	8.2.1	Method Inspection	Once a request is authenticated (or authentication is skipped), the UAS <b>MUST</b> inspect the method of the request.	MUST	NOT REQUIRED	
RFC3261-8-67			If the UAS recognizes but does not support the method of a request, it <b>MUST</b> generate a 405 (Method Not Allowed) response.	MUST	NOT REQUIRED	
RFC3261-8-68			The UAS <b>MUST</b> also add an Allow header field to the 405 (Method Not Allowed) response.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-69			The Allow header field <b>MUST</b> list the set of methods supported by the UAS generating the message.	MUST	NOT REQUIRED	
RFC3261-8-70	8.2.2	Header Inspection	If a UAS does not understand a header field in a request (that is, the header field is not defined in this specification or in any supported extension), the server <b>MUST</b> ignore that header field and continue processing the message.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-8-71			A UAS <b>SHOULD</b> ignore any malformed header fields that are not necessary for processing requests.	SHOULD	NOT REQUIRED	[Registrar test]
RFC3261-8-72	8.2.2.1	To and Request-URI	However, it is <b>RECOMMENDED</b> that a UAS accept requests even if they do not recognize the URI scheme (for example, a tel: URI) in the To header field, or if the To header field does not address a known or current user of this UAS.	RECOMMENDED	NOT REQUIRED	
RFC3261-8-73			If, on the other hand, the UAS decides to reject the request, it <b>SHOULD</b> generate a response with a 403 (Forbidden) status code and pass it to the server transaction for transmission.	SHOULD	NOT REQUIRED	
RFC3261-8-74			If the Request-URI uses a scheme not supported by the UAS, it <b>SHOULD</b> reject the request with a 416 (Unsupported URI Scheme) response.	SHOULD	NOT REQUIRED	
RFC3261-8-75			If the Request-URI does not identify an address that the UAS is willing to accept requests for, it <b>SHOULD</b> reject the request with a 404 (Not Found) response.	SHOULD	NOT REQUIRED	
RFC3261-8-76	8.2.2.2	Merged Requests	If the request has no tag in the To header field, the UAS core <b>MUST</b> check the request against ongoing transactions.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-77			If the From tag, Call-ID, and CSeq exactly match those associated with an ongoing transaction, but the request does not match that transaction (based on the matching rules in Section 17.2.3), the UAS core <b>SHOULD</b> generate a 482 (Loop Detected) response and pass it to the server transaction.	SHOULD	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-78	8.2.2.3	Require	If a UAS does not understand an option-tag listed in a Require header field, it <b>MUST</b> respond by generating a response with status code 420 (Bad Extension).	MUST	NOT REQUIRED	[UA test] [Registrar test]
RFC3261-8-79			The UAS <b>MUST</b> add an Unsupported header field, and list in it those options it does not understand amongst those in the Require header field of the request.	MUST	NOT REQUIRED	[UA test] [Registrar test]
RFC3261-8-80			Note that Require and Proxy-Require <b>MUST NOT</b> be used in a SIP CANCEL request, or in an ACK request sent for a non-2xx response.	MUST NOT	BASIC	generic_make_CANCEL generic_make_ACK_for-non2XX FW-4-1-1
RFC3261-8-81			These header fields <b>MUST</b> be ignored if they are present in these requests.	MUST	BASIC	FW-4-1-1
RFC3261-8-82			An ACK request for a 2xx response <b>MUST</b> contain only those Require and Proxy-Require values that were present in the initial request.	MUST	NOT REQUIRED	[UA test]
RFC3261-8-83	8.2.3	Content Processing	If there are any bodies whose type (indicated by the Content-Type), language (indicated by the Content-Language) or encoding (indicated by the Content-Encoding) are not understood, and that body part is not optional (as indicated by the Content-Disposition header field), the UAS <b>MUST</b> reject the request with a 415 (Unsupported Media	MUST	NOT REQUIRED	[UA test]
RFC3261-8-84			The response <b>MUST</b> contain an Accept header field listing the types of all bodies it understands, in the event the request contained bodies of types not supported by the UAS.	MUST	NOT REQUIRED	
RFC3261-8-85			If the request contained content encodings not understood by the UAS, the response <b>MUST</b> contain an Accept-Encoding header field listing the encodings understood by the UAS.	MUST	NOT REQUIRED	
RFC3261-8-86			If the request contained content with languages not understood by the UAS, the response <b>MUST</b> contain an Accept-Language header field indicating the languages understood by the UAS.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-87	8.2.4	Applying Extensions	A UAS that wishes to apply some extension when generating the response <b>MUST NOT</b> do so unless support for that extension is indicated in the Supported header field in the request.	MUST NOT	NOT REQUIRED	
RFC3261-8-88			If the desired extension is not supported, the server <b>SHOULD</b> rely only on baseline SIP and any other extensions supported by the client.	SHOULD	NOT REQUIRED	
RFC3261-8-89			The needed extension(s) <b>MUST</b> be included in a Require header field in the response.	MUST	NOT REQUIRED	
RFC3261-8-90			This behavior is <b>NOT RECOMMENDED</b> , as it will generally break interoperability.	NOT RECOMMENDED	NOT REQUIRED	
RFC3261-8-91			Any extensions applied to a non-421 response <b>MUST</b> be listed in a Require header field included in the response.	MUST	NOT REQUIRED	
RFC3261-8-92			Of course, the server <b>MUST NOT</b> apply extensions not listed in the Supported header field in the request.	MUST NOT	NOT REQUIRED	
RFC3261-8-93	8.2.6.1	Sending a Provisional Response	One largely non-method-specific guideline for the generation of responses is that UASs <b>SHOULD NOT</b> issue a provisional response for a non-INVITE request.	SHOULD NOT	NOT REQUIRED	[UA test]
RFC3261-8-94			Rather, UASs <b>SHOULD</b> generate a final response to a non-INVITE request as soon as possible.	SHOULD	NOT REQUIRED	
RFC3261-8-95			When a 100 (Trying) response is generated, any Timestamp header field present in the request <b>MUST</b> be copied into this 100 (Trying) response.	MUST	ADVANCED	FW-1-2-6

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-96			If there is a delay in generating the response, the UAS <b>SHOULD</b> add a delay value into the Timestamp value in the response.	SHOULD	ADVANCED	FW-1-2-6
RFC3261-8-97			This value <b>MUST</b> contain the difference between the time of sending of the response and receipt of the request, measured in seconds.	MUST	ADVANCED	FW-1-2-6
RFC3261-8-98	8.2.6.2	Headers and Tags	The From field of the response <b>MUST</b> equal the From header field of the request.	MUST	BASIC	generic_status generic_make_response generic_make_response-200_for-CANCEL
RFC3261-8-99	The Call-ID header field of the response <b>MUST</b> equal the Call-ID header field of the request.		MUST	BASIC	generic_status generic_make_response generic_make_response-200_for-CANCEL	
RFC3261-8-100	The CSeq header field of the response <b>MUST</b> equal the CSeq field of the request.		MUST	BASIC	generic_status generic_make_response generic_make_response-200_for-CANCEL	
RFC3261-8-101	The Via header field values in the response <b>MUST</b> equal the Via header field values in the request and <b>MUST</b> maintain the same ordering.		MUST	BASIC	generic_status generic_make_response generic_make_response-200_for-CANCEL	
RFC3261-8-102			MUST	BASIC	generic_status generic_make_response generic_make_response-200_for-CANCEL	
RFC3261-8-103	If a request contained a To tag in the request, the To header field in the response <b>MUST</b> equal that of the request.		MUST	BASIC	generic_status generic_make_response generic_make_response-200_for-CANCEL	
RFC3261-8-104	However, if the To header field in the request did not contain a tag, the URI in the To header field in the response <b>MUST</b> equal the URI in the To header field; additionally, the UAS <b>MUST</b> add a tag to the To header field in the response (with the exception of the 100 (Trying) response, in which a tag <b>MAY</b> be present).		MUST	BASIC	generic_status generic_make_response

RFC3261-8-105				MUST	BASIC	generic_status generic_make_response
RFC3261-8-106			The same tag <b>MUST</b> be used for all responses to that request, both final and provisional (again excepting the 100 (Trying)).	MUST	BASIC	[tester]
RFC3261-8-107	8.2.7	Stateless UAS Behavior	A stateless UAS <b>MUST NOT</b> send provisional (1xx) responses.	MUST NOT	NOT REQUIRED	
RFC3261-8-108			A stateless UAS <b>MUST NOT</b> retransmit responses.	MUST NOT	NOT REQUIRED	
RFC3261-8-109			A stateless UAS <b>MUST</b> ignore ACK requests.	MUST	NOT REQUIRED	
RFC3261-8-110			A stateless UAS <b>MUST</b> ignore CANCEL requests.	MUST	NOT REQUIRED	
RFC3261-8-111			To header tags <b>MUST</b> be generated for responses in a stateless manner – in a manner that will generate the same tag for the same request consistently.	MUST	NOT REQUIRED	
RFC3261-8-112	8.3	Redirect Servers	For well-formed CANCEL requests, it <b>SHOULD</b> return a 2xx response.	SHOULD	NOT REQUIRED	
RFC3261-8-113			However, redirect servers <b>MUST NOT</b> redirect a request to a URI equal to the one in the Request-URI; instead, provided that the URI does not point to itself, the server <b>MAY</b> proxy the request to the destination URI, or <b>MAY</b> reject it with a 404.	MUST NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-8-114			Malformed values <b>SHOULD</b> be treated as equivalent to 3600.	SHOULD	NOT REQUIRED	
RFC3261-8-115			Redirect servers <b>MUST</b> ignore features that are not understood (including unrecognized header fields, any unknown option tags in Require, or even method names) and proceed with the redirection of the request in question.	MUST	NOT REQUIRED	
RFC3261-9-1	9.1	Client Behavior	A CANCEL request <b>SHOULD NOT</b> be sent to cancel a request other than INVITE.	SHOULD NOT	OUT OF SCOPE	
RFC3261-9-2			The Request-URI, Call-ID, To, the numeric part of CSeq, and From header fields in the CANCEL request <b>MUST</b> be identical to those in the request being cancelled, including tags.	MUST	BASIC	generic_make_CANCEL
RFC3261-9-3			A CANCEL constructed by a client <b>MUST</b> have only a single Via header field value matching the top Via value in the request being cancelled.	MUST	BASIC	generic_make_CANCEL
RFC3261-9-4			However, the method part of the CSeq header field <b>MUST</b> have a value of CANCEL.	MUST	BASIC	generic_make_CANCEL
RFC3261-9-5			If the request being cancelled contains a Route header field, the CANCEL request <b>MUST</b> include that Route header field's values.	MUST	BASIC	generic_make_CANCEL
RFC3261-9-6			The CANCEL request <b>MUST NOT</b> contain any Require or Proxy-Require header fields.	MUST NOT	BASIC	generic_make_CANCEL
RFC3261-9-7			Once the CANCEL is constructed, the client <b>SHOULD</b> check whether it has received any response (provisional or final) for the request being cancelled (herein referred to as the "original request").	SHOULD	BASIC	FW-4-1-2

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-9-8			If no provisional response has been received, the CANCEL request <b>MUST NOT</b> be sent; rather, the client <b>MUST</b> wait for the arrival of a provisional response before sending the request.	MUST NOT	BASIC	FW-4-1-2
RFC3261-9-9				MUST	BASIC	FW-4-1-2
RFC3261-9-10			If the original request has generated a final response, the CANCEL <b>SHOULD NOT</b> be sent, as it is an effective no-op, since CANCEL has no effect on requests that have already generated a final response.	SHOULD NOT	BASIC	FW-4-1-2
RFC3261-9-11			The destination address, port, and transport for the CANCEL <b>MUST</b> be identical to those used to send the original request.	MUST	BASIC	generic_make_CANCEL FW-4-1-2
RFC3261-9-12			If there is no final response for the original request in 64*T1 seconds (T1 is defined in Section 17.1.1.1), the client <b>SHOULD</b> then consider the original transaction cancelled and <b>SHOULD</b> destroy the client transaction handling the original request.	SHOULD	BASIC	TS-3-1-5
RFC3261-9-13				SHOULD	BASIC	TS-3-1-5
RFC3261-9-14	9.2	Server Behavior	If the UAS did not find a matching transaction for the CANCEL according to the procedure above, it <b>SHOULD</b> respond to the CANCEL with a 481 (Call Leg/Transaction Does Not Exist).	SHOULD	NOT REQUIRED	[UA test]
RFC3261-9-15			If the original request was an INVITE, the UAS <b>SHOULD</b> immediately respond to the INVITE with a 487 (Request Terminated).	SHOULD	BASIC	PX-1-1-2 PX-2-1-3 PX-2-1-4 FK-1-1-4
RFC3261-9-16			This response is constructed following the procedures described in Section 8.2.6 noting that the To tag of the response to the CANCEL and the To tag in the response to the original request <b>SHOULD</b> be the same.	SHOULD	BASIC	PX-1-1-2 PX-2-1-3 PX-2-1-4

RFC3261-10-1	10.1	Overview	The only requirement is that a registrar for some domain <b>MUST</b> be able to read and write data to the location service, and a proxy or a redirect server for that domain <b>MUST</b> be capable of reading that same data.	MUST	OUT OF SCOPE	
RFC3261-10-2				MUST	OUT OF SCOPE	
RFC3261-10-3	10.2	Constructing the REGISTER Request	The Record-Route header field has no meaning in REGISTER requests or responses, and <b>MUST</b> be ignored if present.	MUST	NOT REQUIRED	[UA test] [Registrar test]
RFC3261-10-4			In particular, the UAC <b>MUST NOT</b> create a new route set based on the presence or absence of a Record-Route header field in any response to a REGISTER request.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-10-5			The following header fields, except Contact, <b>MUST</b> be included in a REGISTER request.	MUST	NOT REQUIRED	[UA test]
RFC3261-10-6			The "userinfo" and "@" components of the SIP URI <b>MUST NOT</b> be present.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-10-7			This address-of-record <b>MUST</b> be a SIP URI or SIPS URI.	MUST	NOT REQUIRED	[UA test]
RFC3261-10-8			Call-ID: All registrations from a UAC <b>SHOULD</b> use the same Call-ID header field value for registrations sent to a particular registrar.	SHOULD	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-10-9			A UA <b>MUST</b> increment the CSeq value by one for each REGISTER request with the same Call-ID.	MUST	NOT REQUIRED	[UA test]
RFC3261-10-10			UAs <b>MUST NOT</b> send a new registration (that is, containing new Contact header field values, as opposed to a retransmission) until they have received a final response from the registrar for the previous one or the previous REGISTER request has timed out.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-10-11			UACs <b>SHOULD NOT</b> use the "action" parameter.	SHOULD NOT	NOT REQUIRED	[UA test]
RFC3261-10-12			Malformed values <b>SHOULD</b> be treated as equivalent to 3600.	SHOULD	NOT REQUIRED	[Registrar test]
RFC3261-10-13	10.2.1	Adding Bindings	If the address-of-record in the To header field of a REGISTER request is a SIPS URI, then any Contact header field values in the request <b>SHOULD</b> also be SIPS URIs.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-10-14	10.2.2	Removing Bindings	UAs <b>SHOULD</b> support this mechanism so that bindings can be removed before their expiration interval has passed.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-10-15			The REGISTER-specific Contact header field value of "*" applies to all registrations, but it <b>MUST NOT</b> be used unless the Expires header field is present with a value of "0".	MUST NOT	NOT REQUIRED	RQ-4-1-2
RFC3261-10-16	10.2.4	Refreshing Bindings	A UA <b>SHOULD NOT</b> refresh bindings set up by other UAs.	SHOULD NOT	OUT OF SCOPE	
RFC3261-10-17			A UA <b>SHOULD</b> use the same Call-ID for all registrations during a single boot cycle.	SHOULD	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-10-18			Registration refreshes <b>SHOULD</b> be sent to the same network address as the original registration, unless redirected.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-10-19	10.2.6	Discovering a Registrar	If there is no configured registrar address, the UA <b>SHOULD</b> use the host part of the address-of-record as the Request-URI and address the request there, using the normal SIP server location mechanisms [4].	SHOULD	NOT REQUIRED	
RFC3261-10-20	10.2.7	Transmitting a Request	If the transaction layer returns a timeout error because the REGISTER yielded no response, the UAC <b>SHOULD NOT</b> immediately re-attempt a registration to the same registrar.	SHOULD NOT	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-10-21	10.3	Processing REGISTER Requests	A registrar <b>MUST</b> not generate 6xx responses.	MUST NOT	OUT OF SCOPE	
RFC3261-10-22			Registrars <b>MUST</b> ignore the Record-Route header field if it is included in a REGISTER request.	MUST	NOT REQUIRED	[UA test] [Registrar test]
RFC3261-10-23			Registrars <b>MUST NOT</b> include a Record-Route header field in any response to a REGISTER request.	MUST NOT	NOT REQUIRED	[UA test] [Registrar test]
RFC3261-10-24			REGISTER requests <b>MUST</b> be processed by a registrar in the order that they are received.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-25			REGISTER requests <b>MUST</b> also be processed atomically, meaning that a particular REGISTER request is either processed completely or not at all.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-26			Each REGISTER message <b>MUST</b> be processed independently of any other registration or binding changes.	MUST	NOT REQUIRED	[Registrar test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-10-27			If not, and if the server also acts as a proxy server, the server <b>SHOULD</b> forward the request to the addressed domain, following the general behavior for proxying messages described in Section 16.			

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-10-36			If the request has additional Contact fields or an expiration time other than zero, the request is invalid, and the server <b>MUST</b> return a 400 (Invalid Request) and skip the remaining steps.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-37			If not, it <b>MUST</b> remove the binding.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-38			If it does agree, it <b>MUST</b> remove the binding only if the CSeq in the request is higher than the value stored for that binding.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-39			Otherwise, the update <b>MUST</b> be aborted and the request fails.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-40			If the field value has an "expires" parameter, that value <b>MUST</b> be taken as the requested expiration.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-41			If there is no such parameter, but the request has an Expires header field, that value <b>MUST</b> be taken as the requested expiration.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-42			If there is neither, a locally-configured default value <b>MUST</b> be taken as the requested expiration.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-43			This response <b>MUST</b> contain a Min-Expires header field that states the minimum expiration interval the registrar is willing to honor.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-44			If the Call-ID value in the existing binding differs from the Call-ID value in the request, the binding <b>MUST</b> be removed if the expiration time is zero and updated otherwise.	MUST	NOT REQUIRED	[Registrar test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-10-45			If the value is higher than that of the existing binding, it <b>MUST</b> update or remove the binding as above.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-46			If not, the update <b>MUST</b> be aborted and the request fails.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-47			The binding updates <b>MUST</b> be committed (that is, made visible to the proxy or redirect server) if and only if all binding updates and additions succeed.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-48			If any one of them fails (for example, because the back-end database commit failed), the request <b>MUST</b> fail with a 500 (Server Error) response and all tentative binding updates <b>MUST</b> be removed.	MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-49				MUST	NOT REQUIRED	[Registrar test]
RFC3261-10-50			The response <b>MUST</b> contain Contact header field values enumerating all current bindings.	MUST	NOT REQUIRED	RQ-4-1-2
RFC3261-10-51			Each Contact value <b>MUST</b> feature an "expires" parameter indicating its expiration interval chosen by the registrar.	MUST	NOT REQUIRED	RQ-4-1-2
RFC3261-10-52			The response <b>SHOULD</b> include a Date header field.	SHOULD	NOT REQUIRED	RQ-4-1-2
RFC3261-11-1	11	Querying for Capabilities	All UAs <b>MUST</b> support the OPTIONS method.	MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-11-2	11.1	Construction of OPTIONS Request	An Accept header field <b>SHOULD</b> be included to indicate the type of message body the UAC wishes to receive in the response.	SHOULD	NOT REQUIRED	
RFC3261-11-3	11.2	Processing of OPTIONS Request	The response code chosen <b>MUST</b> be the same that would have been chosen had the request been an INVITE.	MUST	NOT REQUIRED	[UA test]
RFC3261-11-4			Allow, Accept, Accept-Encoding, Accept-Language, and Supported header fields <b>SHOULD</b> be present in a 200 (OK) response to an OPTIONS request.	SHOULD	ADVANCED	RQ-1-1-1
RFC3261-11-5			If the response is generated by a proxy, the Allow header field <b>SHOULD</b> be omitted as it is ambiguous since a proxy is method agnostic.	SHOULD	ADVANCED	RQ-1-1-1
RFC3261-11-6			If the types include one that can describe media capabilities, the UAS <b>SHOULD</b> include a body in the response for that purpose.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-12-1	12.1	Creation of a Dialog	UAs <b>MUST</b> assign values to the dialog ID components as described below.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-12-2	12.1.1	UAS behavior	When a UAS responds to a request with a response that establishes a dialog (such as a 2xx to INVITE), the UAS <b>MUST</b> copy all Record-Route header field values from the request into the response (including the URIs, URI parameters, and any Record-Route header field parameters, whether they are known or unknown to the UAS) and <b>MUST</b> maintain the order of those values.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-3				MUST	NOT REQUIRED	[UA test]
RFC3261-12-4			The UAS <b>MUST</b> add a Contact header field to the response.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-5			The URI provided in the Contact header field <b>MUST</b> be a SIP or SIPS URI.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-6			If the request that initiated the dialog contained a SIPS URI in the Request-URI or in the top Record-Route header field value, if there was any, or the Contact header field if there was no Record-Route header field, the Contact header field in the response <b>MUST</b> be a SIPS URI.	MUST	NOT REQUIRED	
RFC3261-12-7			The URI <b>SHOULD</b> have global scope (that is, the same URI can be used in messages outside this dialog).	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-12-8			This state <b>MUST</b> be maintained for the duration of the dialog.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-9			The route set <b>MUST</b> be set to the list of URIs in the Record-Route header field from the request, taken in order and preserving all URI parameters.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-10			If no Record-Route header field is present in the request, the route set <b>MUST</b> be set to the empty set.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-11			The remote target <b>MUST</b> be set to the URI from the Contact header field of the request.	MUST	NOT REQUIRED	
RFC3261-12-12			The remote sequence number <b>MUST</b> be set to the value of the sequence number in the CSeq header field of the request.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-13			The local sequence number <b>MUST</b> be empty.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-14			The call identifier component of the dialog ID <b>MUST</b> be set to the value of the Call-ID in the request.	MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-12-15			The local tag component of the dialog ID <b>MUST</b> be set to the tag in the To field in the response to the request (which always includes a tag), and the remote tag component of the dialog ID <b>MUST</b> be set to the tag from the From field in the request.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-16				MUST	NOT REQUIRED	[UA test]
RFC3261-12-17			A UAS <b>MUST</b> be prepared to receive a request without a tag in the From field, in which case the tag is considered to have a value of null.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-18			The remote URI <b>MUST</b> be set to the URI in the From field, and the local URI <b>MUST</b> be set to the URI in the To field.	MUST	NOT REQUIRED	
RFC3261-12-19				MUST	NOT REQUIRED	
RFC3261-12-20	12.1.2	UAC Behavior	When a UAC sends a request that can establish a dialog (such as an INVITE) it <b>MUST</b> provide a SIP or SIPS URI with global scope (i.e., the same SIP URI can be used in messages outside this dialog) in the Contact header field of the request.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-21			If the request has a Request-URI or a topmost Route header field value with a SIPS URI, the Contact header field <b>MUST</b> contain a SIPS URI.	MUST	NOT REQUIRED	
RFC3261-12-22			This state <b>MUST</b> be maintained for the duration of the dialog.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-12-23			The route set <b>MUST</b> be set to the list of URIs in the Record-Route header field from the response, taken in reverse order and preserving all URI parameters.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-24			If no Record-Route header field is present in the response, the route set <b>MUST</b> be set to the empty set.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-25			The remote target <b>MUST</b> be set to the URI from the Contact header field of the response.	MUST	NOT REQUIRED	
RFC3261-12-26			The local sequence number <b>MUST</b> be set to the value of the sequence number in the CSeq header field of the request.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-27			The remote sequence number <b>MUST</b> be empty (it is established when the remote UA sends a request within the dialog).	MUST	NOT REQUIRED	[UA test]
RFC3261-12-28			The call identifier component of the dialog ID <b>MUST</b> be set to the value of the Call-ID in the request.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-29			The local tag component of the dialog ID <b>MUST</b> be set to the tag in the From field in the request, and the remote tag component of the dialog ID <b>MUST</b> be set to the tag in the To field of the response.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-30				MUST	NOT REQUIRED	[UA test]
RFC3261-12-31			A UAC <b>MUST</b> be prepared to receive a response without a tag in the To field, in which case the tag is considered to have a value of null.	MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-12-32			The remote URI <b>MUST</b> be set to the URI in the To field, and the local URI <b>MUST</b> be set to the URI in the From field.	MUST	NOT REQUIRED	
RFC3261-12-33				MUST	NOT REQUIRED	
RFC3261-12-34	12.2.1.1	Generating the Request	The URI in the To field of the request <b>MUST</b> be set to the remote URI from the dialog state.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-35			The tag in the To header field of the request <b>MUST</b> be set to the remote tag of the dialog ID.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-36			The From URI of the request <b>MUST</b> be set to the local URI from the dialog state.	MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-12-37			The tag in the From header field of the request <b>MUST</b> be set to the local tag of the dialog ID.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-38			If the value of the remote or local tags is null, the tag parameter <b>MUST</b> be omitted from the To or From header fields, respectively.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-39			The Call-ID of the request <b>MUST</b> be set to the Call-ID of the dialog.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-40			Requests within a dialog <b>MUST</b> contain strictly monotonically increasing and contiguous CSeq sequence numbers (increasing-by-one) in each direction (excepting ACK and CANCEL of course, whose numbers equal the requests being acknowledged or cancelled).	MUST	NOT REQUIRED	[UA test]
RFC3261-12-41			Therefore, if the local sequence number is not empty, the value of the local sequence number <b>MUST</b> be incremented by one, and this value <b>MUST</b> be placed into the CSeq header field.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-42				MUST	NOT REQUIRED	[UA test]
RFC3261-12-43			If the local sequence number is empty, an initial value <b>MUST</b> be chosen using the guidelines of Section 8.1.1.5.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-44			The method field in the CSeq header field value <b>MUST</b> match the method of the request.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-45			If the route set is empty, the UAC <b>MUST</b> place the remote target URI into the Request-URI.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-12-46			The UAC <b>MUST NOT</b> add a Route header field to the request.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-12-47			If the route set is not empty, and the first URI in the route set contains the lr parameter (see Section 19.1.1), the UAC <b>MUST</b> place the remote target URI into the Request-URI and <b>MUST</b> include a Route header field containing the route set values in order, including all parameters.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-48				MUST	NOT REQUIRED	[UA test]
RFC3261-12-49			If the route set is not empty, and its first URI does not contain the lr parameter, the UAC <b>MUST</b> place the first URI from the route set into the Request-URI, stripping any parameters that are not allowed in a Request-URI.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-50			The UAC <b>MUST</b> add a Route header field containing the remainder of the route set values in order, including all parameters.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-51			The UAC <b>MUST</b> then place the remote target URI into the Route header field as the last value.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-52			A UAC <b>SHOULD</b> include a Contact header field in any target refresh requests within a dialog, and unless there is a need to change it, the URI <b>SHOULD</b> be the same as used in previous requests within the dialog.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-12-53				SHOULD	NOT REQUIRED	[UA test]
RFC3261-12-54			If the "secure" flag is true, that URI <b>MUST</b> be a SIPS URI.	MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-12-55	12.2.1.2	Processing the Responses	When a UAC receives a 2xx response to a target refresh request, it <b>MUST</b> replace the dialog's remote target URI with the URI from the Contact header field in that response, if present.	MUST	NOT REQUIRED	
RFC3261-12-56			If the response for a request within a dialog is a 481 (Call/Transaction Does Not Exist) or a 408 (Request Timeout), the UAC <b>SHOULD</b> terminate the dialog.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-12-57			A UAC <b>SHOULD</b> also terminate a dialog if no response at all is received for the request (the client transaction would inform the TU about the timeout.)	SHOULD	NOT REQUIRED	[UA test]
RFC3261-12-58	12.2.2	UAS Behavior	If the UAS wishes to reject the request because it does not wish to recreate the dialog, it <b>MUST</b> respond to the request with a 481 (Call/Transaction Does Not Exist) status code and pass that to the server transaction.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-59			If the remote sequence number is empty, it <b>MUST</b> be set to the value of the sequence number in the CSeq header field value in the request.	MUST	NOT REQUIRED	[UA test] [Registrar test]
RFC3261-12-60			If the remote sequence number was not empty, but the sequence number of the request is lower than the remote sequence number, the request is out of order and <b>MUST</b> be rejected with a 500 (Server Internal Error) response.	MUST	NOT REQUIRED	[UA test] [Registrar test]
RFC3261-12-61			This is not an error condition, and a UAS <b>SHOULD</b> be prepared to receive and process requests with CSeq values more than one higher than the previous received request.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-12-62			The UAS <b>MUST</b> then set the remote sequence number to the value of the sequence number in the CSeq header field value in the request.	MUST	NOT REQUIRED	[UA test]
RFC3261-12-63			When a UAS receives a target refresh request, it <b>MUST</b> replace the dialog's remote target URI with the URI from the Contact header field in that request, if present.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-13-1	13.1	Overview	A UA that supports INVITE <b>MUST</b> also support ACK, CANCEL and BYE.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-2	13.2.1	Creating the Initial INVITE	An Allow header field (Section 20.5) <b>SHOULD</b> be present in the INVITE.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-13-3			For example, a UA capable of receiving INFO requests within a dialog [34] <b>SHOULD</b> include an Allow header field listing the INFO method.	SHOULD	NOT REQUIRED	
RFC3261-13-4			A Supported header field (Section 20.37) <b>SHOULD</b> be present in the INVITE.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-13-5			If the time indicated in the Expires header field is reached and no final answer for the INVITE has been received, the UAC core <b>SHOULD</b> generate a CANCEL request for the INVITE, as per Section 9.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-13-6			The initial offer <b>MUST</b> be in either an INVITE or, if not there, in the first reliable non-failure message from the UAS back to the UAC.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-7			If the initial offer is in an INVITE, the answer <b>MUST</b> be in a reliable non-failure message from UAS back to UAC which is correlated to that INVITE.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-8			The UAC <b>MUST</b> treat the first session description it receives as the answer, and <b>MUST</b> ignore any session descriptions in subsequent responses to the initial INVITE.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-9				MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-13-10			If the initial offer is in the first reliable non-failure message from the UAS back to UAC, the answer <b>MUST</b> be in the acknowledgement for that message (in this specification, ACK for a 2xx response).	MUST	NOT REQUIRED	[UA test]
RFC3261-13-11			Once the UAS has sent or received an answer to the initial offer, it <b>MUST NOT</b> generate subsequent offers in any responses to the initial INVITE.	MUST NOT	NOT REQUIRED	
RFC3261-13-12			All user agents that support INVITE <b>MUST</b> support these two exchanges.	MUST	NOT REQUIRED	
RFC3261-13-13			The Session Description Protocol (SDP) (RFC 2327 [1]) <b>MUST</b> be supported by all user agents as a means to describe sessions, and its usage for constructing offers and answers <b>MUST</b> follow the procedures defined in [13].	MUST	NOT REQUIRED	[UA test]
RFC3261-13-14				MUST	NOT REQUIRED	
RFC3261-13-15	13.2.2.3	4xx, 5xx and 6xx Responses	Subsequent final responses (which would only arrive under error conditions) <b>MUST</b> be ignored.	MUST	NOT REQUIRED	
RFC3261-13-16	13.2.2.4	2xx Responses	If the dialog identifier in the 2xx response matches the dialog identifier of an existing dialog, the dialog <b>MUST</b> be transitioned to the "confirmed" state, and the route set for the dialog <b>MUST</b> be recomputed based on the 2xx response using the procedures of Section 12.2.1.2.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-17				MUST	NOT REQUIRED	[UA test]
RFC3261-13-18			Otherwise, a new dialog in the "confirmed" state <b>MUST</b> be constructed using the procedures of Section 12.1.2.	MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-13-19			The UAC core <b>MUST</b> generate an ACK request for each 2xx received from the transaction layer.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-20			The sequence number of the CSeq header field <b>MUST</b> be the same as the INVITE being acknowledged, but the CSeq method <b>MUST</b> be ACK.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-21				MUST	NOT REQUIRED	[UA test]
RFC3261-13-22			The ACK <b>MUST</b> contain the same credentials as the INVITE.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-23			If the 2xx contains an offer (based on the rules above), the ACK <b>MUST</b> carry an answer in its body.	MUST	NOT REQUIRED	
RFC3261-13-24			If the offer in the 2xx response is not acceptable, the UAC core <b>MUST</b> generate a valid answer in the ACK and then send a BYE immediately.	MUST	NOT REQUIRED	
RFC3261-13-25			The ACK <b>MUST</b> be passed to the client transport every time a retransmission of the 2xx final response that triggered the ACK arrives.	MUST	NOT REQUIRED	
RFC3261-13-26			If, after acknowledging any 2xx response to an INVITE, the UAC does not want to continue with that dialog, then the UAC <b>MUST</b> terminate the dialog by sending a BYE request as described in Section 15.	MUST	NOT REQUIRED	
RFC3261-13-27	13.3.1	Processing of the INVITE	If the invitation expires before the UAS has generated a final response, a 487 (Request Terminated) response <b>SHOULD</b> be generated.	SHOULD	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-13-28			It <b>MUST</b> provide the offer in its first non-failure reliable message back to the UAC.	MUST	NOT REQUIRED	
RFC3261-13-29	13.3.1.1	Progress	Each of these <b>MUST</b> indicate the same dialog ID.	MUST	NOT REQUIRED	
RFC3261-13-30			To prevent cancellation, the UAS <b>MUST</b> send a non-100 provisional response at every minute, to handle the possibility of lost provisional responses.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-31	13.3.1.2	The INVITE is Redirected	A 300 (Multiple Choices), 301 (Moved Permanently) or 302 (Moved Temporarily) response <b>SHOULD</b> contain a Contact header field containing one or more URIs of new addresses to be tried.	SHOULD	NOT REQUIRED	
RFC3261-13-32	13.3.1.3	The INVITE is Rejected	A 486 (Busy Here) <b>SHOULD</b> be returned in such a scenario.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-13-33			If the UAS knows that no other end system will be able to accept this call, a 600 (Busy Everywhere) response <b>SHOULD</b> be sent instead.	SHOULD	NOT REQUIRED	
RFC3261-13-34			A UAS rejecting an offer contained in an INVITE <b>SHOULD</b> return a 488 (Not Acceptable Here) response.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-13-35			Such a response <b>SHOULD</b> include a Warning header field value explaining why the offer was rejected.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-13-36	13.3.1.4	The INVITE is Accepted	A 2xx response to an INVITE <b>SHOULD</b> contain the Allow header field and the Supported header field, and <b>MAY</b> contain the Accept header field.	SHOULD	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-13-37			If the INVITE request contained an offer, and the UAS had not yet sent an answer, the 2xx <b>MUST</b> contain an answer.	MUST	NOT REQUIRED	[UA test]
RFC3261-13-38			If the INVITE did not contain an offer, the 2xx <b>MUST</b> contain an offer if the UAS had not yet sent an offer.	MUST	NOT REQUIRED	
RFC3261-13-39			If the server retransmits the 2xx response for 64*T1 seconds without receiving an ACK, the dialog is confirmed, but the session <b>SHOULD</b> be terminated.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-14-1	14	Modifying an Existing Session	However, automated generation of re-INVITE or BYE is <b>NOT RECOMMENDED</b> to avoid flooding the network with traffic when there is congestion.	RECOMMENDED	NOT REQUIRED	[UA test]
RFC3261-14-2			In any case, if these messages are sent automatically, they <b>SHOULD</b> be sent after some randomized interval.	SHOULD	OUT OF SCOPE	
RFC3261-14-3	14.1	UAC Behavior	If the session description format has the capability for version numbers, the offerer <b>SHOULD</b> indicate that the version of the session description has changed.	SHOULD	NOT REQUIRED	
RFC3261-14-4			Note that a UAC <b>MUST NOT</b> initiate a new INVITE transaction within a dialog while another INVITE transaction is in progress in either direction.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-14-5			1. If there is an ongoing INVITE client transaction, the TU <b>MUST</b> wait until the transaction reaches the completed or terminated state before initiating the new INVITE.	MUST	NOT REQUIRED	
RFC3261-14-6			2. If there is an ongoing INVITE server transaction, the TU <b>MUST</b> wait until the transaction reaches the confirmed or terminated state before initiating the new INVITE.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-14-7			If a UA receives a non-2xx final response to a re-INVITE, the session parameters <b>MUST</b> remain unchanged, as if no re-INVITE had been issued.	MUST	NOT REQUIRED	[UA test]
RFC3261-14-8			If a UAC receives a 491 response to a re-INVITE, it <b>SHOULD</b> start a timer with a value T chosen as follows:	SHOULD	NOT REQUIRED	[UA test]
RFC3261-14-9			When the timer fires, the UAC <b>SHOULD</b> attempt the re-INVITE once more, if it still desires for that session modification to take place.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-14-10	14.2	UAS Behavior	A UAS that receives a second INVITE before it sends the final response to a first INVITE with a lower CSeq sequence number on the same dialog <b>MUST</b> return a 500 (Server Internal Error) response to the second INVITE and <b>MUST</b> include a Retry-After header field with a randomly chosen value of between 0 and 10 seconds.	MUST	NOT REQUIRED	[UA test]
RFC3261-14-11				MUST	NOT REQUIRED	[UA test]
RFC3261-14-12			A UAS that receives an INVITE on a dialog while an INVITE it had sent on that dialog is in progress <b>MUST</b> return a 491 (Request Pending) response to the received INVITE.	MUST	NOT REQUIRED	[UA test]
RFC3261-14-13			If a UA receives a re-INVITE for an existing dialog, it <b>MUST</b> check any version identifiers in the session description or, if there are no version identifiers, the content of the session description to see if it has changed.	MUST	NOT REQUIRED	
RFC3261-14-14			If the session description has changed, the UAS <b>MUST</b> adjust the session parameters accordingly, possibly after asking the user for confirmation.	MUST	NOT REQUIRED	
RFC3261-14-15			This response <b>SHOULD</b> include a Warning header field.	SHOULD	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-14-16			If a UAS generates a 2xx response and never receives an ACK, it <b>SHOULD</b> generate a BYE to terminate the dialog.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-14-17			A UAS providing an offer in a 2xx (because the INVITE did not contain an offer) <b>SHOULD</b> construct the offer as if the UAS were making a brand new call, subject to the constraints of sending an offer that updates an existing session, as described in [13] in the case of SDP.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-14-18			Specifically, this means that it <b>SHOULD</b> include as many media formats and media types that the UA is willing to support.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-14-19			The UAS <b>MUST</b> ensure that the session description overlaps with its previous session description in media formats, transports, or other parameters that require support from the peer.	MUST	NOT REQUIRED	[UA test]
RFC3261-14-20			If, however, it is unacceptable to the UAC, the UAC <b>SHOULD</b> generate an answer with a valid session description, and then send a BYE to terminate the session.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-15-1	15	Terminating a Session	When a BYE is received on a dialog, any session associated with that dialog <b>SHOULD</b> terminate.	SHOULD	NOT REQUIRED	
RFC3261-15-2			A UA <b>MUST NOT</b> send a BYE outside of a dialog.	MUST NOT	NOT REQUIRED	
RFC3261-15-3			The caller's UA <b>MAY</b> send a BYE for either confirmed or early dialogs, and the callee's UA <b>MAY</b> send a BYE on confirmed dialogs, but <b>MUST NOT</b> send a BYE on early dialogs.	MUST NOT	NOT REQUIRED	
RFC3261-15-4			However, the callee's UA <b>MUST NOT</b> send a BYE on a confirmed dialog until it has received an ACK for its 2xx response or until the server transaction times out.	MUST NOT	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-15-5	15.1.1	UAC Behavior	The UAC <b>MUST</b> consider the session terminated (and therefore stop sending or listening for media) as soon as the BYE request is passed to the client transaction.	MUST	NOT REQUIRED	
RFC3261-15-6			If the response for the BYE is a 481 (Call/Transaction Does Not Exist) or a 408 (Request Timeout) or no response at all is received for the BYE (that is, a timeout is returned by the client transaction), the UAC <b>MUST</b> consider the session and the dialog terminated.	MUST	NOT REQUIRED	
RFC3261-15-7	15.1.2	UAS Behavior	If the BYE does not match an existing dialog, the UAS core <b>SHOULD</b> generate a 481 (Call/Transaction Does Not Exist) response and pass that to the server transaction.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-15-8			A UAS core receiving a BYE request for an existing dialog <b>MUST</b> follow the procedures of Section 12.2.2 to process the request.	MUST	NOT REQUIRED	
RFC3261-15-9			Once done, the UAS <b>SHOULD</b> terminate the session (and therefore stop sending and listening for media).	SHOULD	NOT REQUIRED	
RFC3261-15-10			Whether or not it ends its participation on the session, the UAS core <b>MUST</b> generate a 2xx response to the BYE, and <b>MUST</b> pass that to the server transaction for transmission.	MUST	NOT REQUIRED	[UA test]
RFC3261-15-11				MUST	NOT REQUIRED	[UA test]
RFC3261-15-12		The UAS <b>MUST</b> still respond to any pending requests received for that dialog.	MUST	NOT REQUIRED		
RFC3261-15-13		It is <b>RECOMMENDED</b> that a 487 (Request Terminated) response be generated to those pending requests.	RECOMMENDED	NOT REQUIRED		

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-1	16.1	Overview	When responding directly to a request, the element is playing the role of a UAS and <b>MUST</b> behave as described in Section 8.2.	MUST	BASIC	[tester]
RFC3261-16-2			Any request that is forwarded to more than one location <b>MUST</b> be handled statefully.	MUST	ADVANCED	FK-1-1-1 FK-1-1-2 FK-1-1-3 FK-1-1-4 FK-1-1-5
RFC3261-16-3			Requests forwarded between different types of transports where the proxy's TU must take an active role in ensuring reliable delivery on one of the transports <b>MUST</b> be forwarded transaction statefully.	MUST	NOT REQUIRED	
RFC3261-16-4			The proxy <b>SHOULD NOT</b> initiate a CANCEL request.	SHOULD NOT	OUT OF SCOPE	
RFC3261-16-5	16.2	Stateful Proxy	The proxy core <b>MUST</b> behave as a UAS with respect to sending an immediate provisional on that server transaction (such as 100 Trying) as described in Section 8.2.6.	MUST	BASIC	[tester]
RFC3261-16-6			Thus, a stateful proxy <b>SHOULD NOT</b> generate 100 (Trying) responses to non-INVITE requests.	SHOULD NOT	BASIC	[tester]
RFC3261-16-7			For all new requests, including any with unknown methods, an element intending to proxy the request <b>MUST</b> :	MUST	OUT OF SCOPE	
RFC3261-16-8	16.3	Request Validation	Before an element can proxy a request, it <b>MUST</b> verify the message's validity.	MUST	OUT OF SCOPE	
RFC3261-16-9			If any of these checks fail, the element <b>MUST</b> behave as a user agent server (see Section 8.2) and respond with an error code.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-10			Notice that a proxy is not required to detect merged requests and <b>MUST NOT</b> treat merged requests as an error condition.	MUST NOT	OUT OF SCOPE	
RFC3261-16-11			The request <b>MUST</b> be well-formed enough to be handled with a server transaction.	MUST	BASIC	[tester]
RFC3261-16-12			Any components involved in the remainder of these Request Validation steps or the Request Forwarding section <b>MUST</b> be well-formed.	MUST	BASIC	[tester]
RFC3261-16-13			Any other components, well-formed or not, <b>SHOULD</b> be ignored and remain unchanged when the message is forwarded.	SHOULD	BASIC	RQ-2-1-1 RQ-2-1-2 RQ-3-1-1 RQ-3-1-2 RQ-4-1-1 RS-1-1-6
RFC3261-16-14			An element <b>MUST NOT</b> refuse to proxy a request because it contains a method or header field it does not know about.	MUST NOT	BASIC	RQ-2-1-1
RFC3261-16-15			If the Request-URI has a URI whose scheme is not understood by the proxy, the proxy <b>SHOULD</b> reject the request with a 416 (Unsupported URI Scheme) response.	SHOULD	BASIC	FW-1-2-1
RFC3261-16-16			If the request contains a Max-Forwards header field with a field value of zero (0), the element <b>MUST NOT</b> forward the request.	MUST NOT	BASIC	FW-1-2-4
RFC3261-16-17			Otherwise, the element <b>MUST</b> return a 483 (Too many hops) response.	MUST	BASIC	FW-1-2-4
RFC3261-16-18			If the request contains a Proxy-Require header field (Section 20.29) with one or more option-tags this element does not understand, the element <b>MUST</b> return a 420 (Bad Extension) response.	MUST	ADVANCED	FW-1-2-3

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-19			The response <b>MUST</b> include an Unsupported (Section 20.40) header field listing those option-tags the element did not understand.	MUST	ADVANCED	FW-1-2-3
RFC3261-16-20			If an element requires credentials before forwarding a request, the request <b>MUST</b> be inspected as described in Section 22.3.	MUST	OUT OF SCOPE	
RFC3261-16-21	16.4	Route Information Preprocessing	The proxy <b>MUST</b> inspect the Request-URI of the request.	MUST	OUT OF SCOPE	
RFC3261-16-22			If the Request-URI of the request contains a value this proxy previously placed into a Record-Route header field (see Section 16.6 item 4), the proxy <b>MUST</b> replace the Request-URI in the request with the last value from the Route header field, and remove that value from the Route header field.	MUST	BASIC	generic_forward_R-URI_non-responsible-domain FW-3-1-1
RFC3261-16-23			The proxy <b>MUST</b> then proceed as if it received this modified request.	MUST	BASIC	generic_forward_R-URI_non-responsible-domain FW-3-1-1
RFC3261-16-24			If the Request-URI contains a maddr parameter, the proxy <b>MUST</b> check to see if its value is in the set of addresses or domains the proxy is configured to be responsible for.	MUST	OUT OF SCOPE	
RFC3261-16-25			If the Request-URI has a maddr parameter with a value the proxy is responsible for, and the request was received using the port and transport indicated (explicitly or by default) in the Request-URI, the proxy <b>MUST</b> strip the maddr and any non-default port or transport parameter and continue processing as if those values had not been present in the request.	MUST	OUT OF SCOPE	
RFC3261-16-26			If the first value in the Route header field indicates this proxy, the proxy <b>MUST</b> remove that value from the request.	MUST	BASIC	generic_forward_request
RFC3261-16-27	16.5	Determining Request Targets	If the Request-URI of the request contains an maddr parameter, the Request-URI <b>MUST</b> be placed into the target set as the only target URI, and the proxy <b>MUST</b> proceed to Section 16.6.	MUST	NOT REQUIRED

RFC3261-16-50			If the copy does not contain a Max-Forwards header field, the proxy <b>MUST</b> add one with a field value, which <b>SHOULD</b> be 70.	MUST	BASIC	FW-1-2-5

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-51				SHOULD	BASIC	FW-1-2-5
RFC3261-16-52			If this proxy wishes to remain on the path of future requests in a dialog created by this request (assuming the request creates a dialog), it <b>MUST</b> insert a Record-Route header field value into the copy before any existing Record-Route header field values, even if a Route header field is already present.	MUST	BASIC	generic_forward_request
RFC3261-16-53			If this request is already part of a dialog, the proxy <b>SHOULD</b> insert a Record-Route header field value if it wishes to remain on the path of future requests in the dialog.	SHOULD	BASIC	generic_forward_request
RFC3261-16-54			The URI placed in the Record-Route header field value <b>MUST</b> be a SIP or SIPS URI.	MUST	BASIC	generic_forward_request
RFC3261-16-55			This URI <b>MUST</b> contain an lr parameter (see Section 19.1.1).	MUST	BASIC	generic_forward_request
RFC3261-16-56			The URI <b>SHOULD NOT</b> contain the transport parameter unless the proxy has knowledge (such as in a private network) that the next downstream element that will be in the path of subsequent requests supports that transport.	SHOULD NOT	BASIC	generic_forward_request
RFC3261-16-57			The URI placed in the Record-Route header field <b>MUST</b> resolve to the element inserting it (or a suitable stand-in) when the server location procedures of [4] are applied to it, so that subsequent requests reach the same SIP element.	MUST	OUT OF SCOPE	
RFC3261-16-58			If the Request-URI contains a SIPS URI, or the topmost Route header field value (after the post processing of bullet 6) contains a SIPS URI, the URI placed into the Record-Route header field <b>MUST</b> be a SIPS URI.	MUST	NOT REQUIRED	
RFC3261-16-59			Furthermore, if the request was not received over TLS, the proxy <b>MUST</b> insert a Record-Route header field.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-60			In a similar fashion, a proxy that receives a request over TLS, but generates a request without a SIPS URI in the Request-URI or topmost Route header field value (after the post processing of bullet 6), <b>MUST</b> insert a Record-Route header field that is not a SIPS URI.	MUST	NOT REQUIRED	
RFC3261-16-61			If the URI placed in the Record-Route header field needs to be rewritten when it passes back through in a response, the URI <b>MUST</b> be distinct enough to locate at that time.	MUST	OUT OF SCOPE	
RFC3261-16-62			If a proxy needs to be in the path of any type of dialog (such as one straddling a firewall), it <b>SHOULD</b> add a Record-Route header field value to every request with a method it does not understand since that method may have dialog semantics.	SHOULD	NOT REQUIRED	
RFC3261-16-63			Endpoints <b>MUST NOT</b> use a URI obtained from a Record-Route header field outside the dialog in which it was provided.	MUST NOT	OUT OF SCOPE	
RFC3261-16-64			A proxy <b>MUST</b> ensure that all such proxies are loose routers.	MUST	OUT OF SCOPE	
RFC3261-16-65			This set <b>MUST</b> be pushed into the Route header field of the copy ahead of any existing values, if present.	MUST	OUT OF SCOPE	
RFC3261-16-66			If the Route header field is absent, it <b>MUST</b> be added, containing that list of URIs.	MUST	OUT OF SCOPE	
RFC3261-16-67			If the request has a Route header field, this alternative <b>MUST NOT</b> be used unless it is known that next hop proxy is a loose router.	MUST NOT	OUT OF SCOPE	
RFC3261-16-68			Furthermore, if the Request-URI contains a SIPS URI, TLS <b>MUST</b> be used to communicate with that proxy.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-69			If the copy contains a Route header field, the proxy <b>MUST</b> inspect the URI in its first value.	MUST	BASIC	FW-3-1-2
RFC3261-16-70			If that URI does not contain an lr parameter, the proxy <b>MUST</b> modify the copy as follows:	MUST	ADVANCED	FW-3-1-2
RFC3261-16-71			The proxy <b>MUST</b> place the Request-URI into the Route header field as the last value.	MUST	ADVANCED	FW-3-1-2
RFC3261-16-72			The proxy <b>MUST</b> then place the first Route header field value into the Request-URI and remove that value from the Route header field.	MUST	ADVANCED	generic_forward_request FW-3-1-2
RFC3261-16-73			Such a policy <b>MUST NOT</b> be used if the proxy is not certain that the IP address, port, and transport correspond to a server that is a loose router.	MUST NOT	OUT OF SCOPE	
RFC3261-16-74			However, this mechanism for sending the request through a specific next hop is <b>NOT RECOMMENDED</b> ; instead a Route header field should be used for that purpose as described above.	NOT RECOMMENDED	OUT OF SCOPE	
RFC3261-16-75			If the proxy has reformatted the request to send to a strict-routing element as described in step 6 above, the proxy <b>MUST</b> apply those procedures to the Request-URI of the request.	MUST	NOT REQUIRED	
RFC3261-16-76			Otherwise, the proxy <b>MUST</b> apply the procedures to the first value in the Route header field, if present, else the Request-URI.	MUST	NOT REQUIRED	
RFC3261-16-77			Independently of which URI is being used as input to the procedures of [4], if the Request-URI specifies a SIPS resource, the proxy <b>MUST</b> follow the procedures of [4] as if the input URI were a SIPS URI.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-78			As described in [4], the proxy <b>MUST</b> attempt to deliver the message to the first tuple in that set, and proceed through the set in order until the delivery attempt succeeds.	MUST	NOT REQUIRED	
RFC3261-16-79			For each tuple attempted, the proxy <b>MUST</b> format the message as appropriate for the tuple and send the request using a new client transaction as detailed in steps 8 through 10.	MUST	NOT REQUIRED	
RFC3261-16-80			Thus, the branch parameter provided with the Via header field inserted in step 8 <b>MUST</b> be different for each attempt.	MUST	BASIC	FK-1-1-1 FK-1-1-5
RFC3261-16-81			The proxy <b>MUST</b> insert a Via header field value into the copy before the existing Via header field values.	MUST	BASIC	generic_forward_request
RFC3261-16-82			A proxy choosing to detect loops <b>SHOULD</b> create a branch parameter separable into two parts by the implementation.	SHOULD	NOT REQUIRED	
RFC3261-16-83			The first part <b>MUST</b> satisfy the constraints of Section 8.1.1.7 as described above.	MUST	NOT REQUIRED	
RFC3261-16-84			The value placed in this part of the branch parameter <b>SHOULD</b> reflect all of those fields (including any Route, Proxy-Require and Proxy- Authorization header fields).	SHOULD	NOT REQUIRED	
RFC3261-16-85			If a proxy wishes to detect loops, the "branch" parameter it supplies <b>MUST</b> depend on all information affecting processing of a request, including the incoming Request-URI and any header fields affecting the request's admission or routing.	MUST	NOT REQUIRED	
RFC3261-16-86			The request method <b>MUST NOT</b> be included in the calculation of the branch parameter.	MUST NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-87			In particular, CANCEL and ACK requests (for non-2xx responses) <b>MUST</b> have the same branch value as the corresponding request they cancel or acknowledge.	MUST	BASIC	generic_forward_request
RFC3261-16-88			If the request will be sent to the next hop using a stream- based transport and the copy contains no Content-Length header field, the proxy <b>MUST</b> insert one with the correct value for the body of the request (see Section 20.14).	MUST	NOT REQUIRED	
RFC3261-16-89			A stateful proxy <b>MUST</b> create a new client transaction for this request as described in Section 17.1 and instructs the transaction to send the request using the address, port and transport determined in step 7.	MUST	OUT OF SCOPE	
RFC3261-16-90			Timer C <b>MUST</b> be set for each client transaction when an INVITE request is proxied.	MUST	BASIC	PG-1-1-2 PG-1-2-1 PG-1-2-2
RFC3261-16-91			The timer <b>MUST</b> be larger than 3 minutes.	MUST	BASIC	PG-1-1-2 PG-1-2-1 PG-1-2-2
RFC3261-16-92	16.7	Response Processing	If none is found, the element <b>MUST</b> process the response (even if it is an informational response) as a stateless proxy (described below).	MUST	BASIC	FW-2-1-3
RFC3261-16-93			As client transactions pass responses to the proxy layer, the following processing <b>MUST</b> take place:	MUST	OUT OF SCOPE	
RFC3261-16-94			The following processing <b>MUST</b> be performed on each response that is forwarded.	MUST	BASIC	generic_forward_response
RFC3261-16-95			For an INVITE transaction, if the response is a provisional response with status codes 101 to 199 inclusive (i.e., anything but 100), the proxy <b>MUST</b> reset timer C for that client transaction.	MUST	NOT REQUIRED	PG-1-1-2

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-96			The timer MAY be reset to a different value, but this value <b>MUST</b> be greater than 3 minutes.	MUST	BASIC	PG-1-1-2
RFC3261-16-97			If no Via header field values remain in the response, the response was meant for this element and <b>MUST NOT</b> be forwarded.	MUST NOT	BASIC	[tester]
RFC3261-16-98			If the proxy chooses to recurse on any contacts in a 3xx response by adding them to the target set, it <b>MUST</b> remove them from the response before adding the response to the response context.	MUST	NOT REQUIRED	
RFC3261-16-99			However, a proxy <b>SHOULD NOT</b> recurse to a non-SIPS URI if the Request-URI of the original request was a SIPS URI.	SHOULD NOT	NOT REQUIRED	
RFC3261-16-100			If the proxy recurses on all of the contacts in a 3xx response, the proxy <b>SHOULD NOT</b> add the resulting contactless response to the response context.	SHOULD NOT	NOT REQUIRED	
RFC3261-16-101			If a proxy receives a 416 (Unsupported URI Scheme) response to a request whose Request-URI scheme was not SIP, but the scheme in the original received request was SIP or SIPS (that is, the proxy changed the scheme from SIP or SIPS to something else when it proxied a request), the proxy <b>SHOULD</b> add a new URI to the target set.	SHOULD	BASIC	FW-1-1-3
RFC3261-16-102			This URI <b>SHOULD</b> be a SIP URI version of the non-SIP URI that was just tried.	SHOULD	BASIC	FW-1-1-3
RFC3261-16-103			As with a 3xx response, if a proxy "recurses" on the 416 by trying a SIP or SIPS URI instead, the 416 response <b>SHOULD NOT</b> be added to the response context.	SHOULD NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-104			Until a final response has been sent on the server transaction, the following responses <b>MUST</b> be forwarded immediately:	MUST	BASIC	PX-1-1-1, PX-1-1-3 PX-1-2-1, PX-2-1-1 PX-2-1-2, PX-2-1-5 PX-2-1-6, FW-2-1-1 FW-2-1-2, FW-2-1-3 RQ-1-1-2, RQ-2-1-2 RQ-2-1-3, RQ-3-1-2 RS-1-1-1, RS-1-1-5 RS-1-1-6, FK-1-1-1 FK-1-1-4, TS-5-1-1 TS-5-1-2, TS-5-1-3 PG-1-1-1, TP-1-1-1 TP-1-2-1.
RFC3261-16-105			If a 6xx response is received, it is not immediately forwarded, but the stateful proxy <b>SHOULD</b> cancel all client pending transactions as described in Section 10, and it <b>MUST NOT</b> create any new branches in this context.	SHOULD	BASIC	FK-1-1-5
RFC3261-16-106				MUST NOT	BASIC	FK-1-1-5
RFC3261-16-107			After a final response has been sent on the server transaction, the following responses <b>MUST</b> be forwarded immediately:	MUST	BASIC	RS-1-1-1
RFC3261-16-108			A stateful proxy <b>MUST NOT</b> immediately forward any other responses.	MUST NOT	BASIC	PX-2-1-1 FK-1-1-5
RFC3261-16-109			In particular, a stateful proxy <b>MUST NOT</b> forward any 100 (Trying) response.	MUST NOT	BASIC	PX-2-1-1 FK-1-1-5
RFC3261-16-110			Any response chosen for immediate forwarding <b>MUST</b> be processed as described in steps "Aggregate Authorization Header Field Values" through "Record-Route".	MUST	NOT REQUIRED	
RFC3261-16-111			A stateful proxy <b>MUST</b> send a final response to a response context's server transaction if no final responses have been immediately forwarded by the above rules and all client transactions in this response context have been terminated.	MUST	BASIC	FK-1-1-2 FK-1-1-3

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-112			The stateful proxy <b>MUST</b> choose the "best" final response among those received and stored in the response context.	MUST	BASIC	FK-1-1-2 FK-1-1-3
RFC3261-16-113			If there are no final responses in the context, the proxy <b>MUST</b> send a 408 (Request Timeout) response to the server transaction.	MUST	BASIC	TS-2-1-1
RFC3261-16-114			Otherwise, the proxy <b>MUST</b> forward a response from the responses stored in the response context.	MUST	BASIC	FK-1-1-2
RFC3261-16-115			It <b>MUST</b> choose from the 6xx class responses if any exist in the context.	MUST	BASIC	FK-1-1-2
RFC3261-16-116			If no 6xx class responses are present, the proxy <b>SHOULD</b> choose from the lowest response class stored in the response context.	SHOULD	BASIC	FK-1-1-3
RFC3261-16-117			The proxy <b>SHOULD</b> give preference to responses that provide information affecting resubmission of this request, such as 401, 407, 415, 420, and 484 if the 4xx class is chosen.	SHOULD	OUT OF SCOPE	
RFC3261-16-118			A proxy which receives a 503 (Service Unavailable) response <b>SHOULD NOT</b> forward it upstream unless it can determine that any subsequent requests it might proxy will also generate a 503.	SHOULD NOT	BASIC	FW-2-2-1 FW-2-2-2 FW-2-2-4 TP-2-2-1
RFC3261-16-119			If the only response that was received is a 503, the proxy <b>SHOULD</b> generate a 500 response and forward that upstream.	SHOULD	BASIC	FW-2-2-1 FW-2-2-2 FW-2-2-4 TP-2-2-1
RFC3261-16-120			The forwarded response <b>MUST</b> be processed as described in steps "Aggregate Authorization Header Field Values" through "Record-Route".	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-121			A proxy <b>MUST NOT</b> insert a tag into the To header field of a 1xx or 2xx response if the request did not contain one.	MUST NOT	BASIC	RQ-2-1-2 RQ-2-1-3
RFC3261-16-122			A proxy <b>MUST NOT</b> modify the tag in the To header field of a 1xx or 2xx response.	MUST NOT	BASIC	RQ-2-1-2 RQ-2-1-3
RFC3261-16-123			An element <b>SHOULD</b> preserve the To tag when simply forwarding a 3-6xx response to a request that did not contain a To tag.	SHOULD	BASIC	RS-1-1-2 RS-1-1-3 RS-1-1-4
RFC3261-16-124			A proxy <b>MUST NOT</b> modify the To tag in any forwarded response to a request that contains a To tag.	MUST NOT	BASIC	generic_forward_from-PX2 generic_forward_from-UA11 generic_forward_from-UA12
RFC3261-16-125			If the selected response is a 401 (Unauthorized) or 407 (Proxy Authentication Required), the proxy <b>MUST</b> collect any WWW-Authenticate and Proxy-Authenticate header field values from all other 401 (Unauthorized) and 407 (Proxy Authentication Required) responses received so far in this <u>response context and add them to this</u>	MUST	OUT OF SCOPE	
RFC3261-16-126			If the proxy received the request over TLS, and sent it out over a non-TLS connection, the proxy <b>MUST</b> rewrite the URI in the Record-Route header field to be a SIPS URI.	MUST	NOT REQUIRED	
RFC3261-16-127			If the proxy received the request over a non-TLS connection, and sent it out over TLS, the proxy <b>MUST</b> rewrite the URI in the Record-Route header field to be a SIP URI.	MUST	NOT REQUIRED	
RFC3261-16-128			The new URI provided by the proxy <b>MUST</b> satisfy the same constraints on URIs placed in Record-Route header fields in requests (see Step 4 of Section 16.6) with the following modifications:	MUST	NOT REQUIRED	
RFC3261-16-129			The URI <b>SHOULD NOT</b> contain the transport parameter unless the proxy has knowledge that the next upstream (as opposed to downstream) element that will be in the path of subsequent requests supports that transport.	SHOULD NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-130			A <b>RECOMMENDED</b> mechanism to achieve this is for the proxy to append a unique identifier for the proxy instance to the user portion of the URI.	RECOMMENDED	NOT REQUIRED	
RFC3261-16-131			The proxy <b>MUST NOT</b> add to, modify, or remove the message body.	MUST NOT	BASIC	generic_forward_from-PX2 generic_forward_from-UA11 generic_forward_from-UA12
RFC3261-16-132			Unless otherwise specified, the proxy <b>MUST NOT</b> remove any header field values other than the Via header field value discussed in Section 16.7 Item 3.	MUST NOT	OUT OF SCOPE	
RFC3261-16-133			In particular, the proxy <b>MUST NOT</b> remove any "received" parameter it may have added to the next Via header field value while processing the request associated with this response.	MUST NOT	BASIC	[tester]
RFC3261-16-134			The proxy <b>MUST</b> pass the response to the server transaction associated with the response context.	MUST	OUT OF SCOPE	
RFC3261-16-135			If the server transaction is no longer available to handle the transmission, the element <b>MUST</b> forward the response statelessly by sending it to the server transport.	MUST	BASIC	generic_forward_response
RFC3261-16-136			The proxy <b>MUST</b> maintain the response context until all of its associated transactions have been terminated, even after forwarding a final response.	MUST	OUT OF SCOPE	
RFC3261-16-137			If the forwarded response was a final response, the proxy <b>MUST</b> generate a CANCEL request for all pending client transactions associated with this response context.	MUST	BASIC	FK-1-1-1 FK-1-1-5
RFC3261-16-138			A proxy <b>SHOULD</b> also generate a CANCEL request for all pending client transactions associated with this response context when it receives a 6xx response.	SHOULD	BASIC	FK-1-1-5

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-139	16.8	Processing Timer C	If timer C should fire, the proxy <b>MUST</b> either reset the timer with any value it chooses, or terminate the client transaction.	MUST	BASIC	PG-1-2-1 PG-1-2-2
RFC3261-16-140			If the client transaction has received a provisional response, the proxy <b>MUST</b> generate a CANCEL request matching that transaction.	MUST	BASIC	PG-1-2-1 PG-1-2-2
RFC3261-16-141			If the client transaction has not received a provisional response, the proxy <b>MUST</b> behave as if the transaction received a 408 (Request Timeout) response.	MUST	BASIC	PG-1-2-1 PG-1-2-2
RFC3261-16-142	16.9	Handling Transport Errors	If the transport layer notifies a proxy of an error when it tries to forward a request (see Section 18.4), the proxy <b>MUST</b> behave as if the forwarded request received a 503 (Service Unavailable) response.	MUST	BASIC	TP-2-2-1
RFC3261-16-143			The proxy <b>SHOULD NOT</b> cancel any outstanding client transactions associated with this response context due to this notification.	SHOULD NOT	OUT OF SCOPE	
RFC3261-16-144	16.10	CANCEL Processing	A proxy <b>MUST</b> cancel any pending client transactions associated with a response context when it receives a matching CANCEL request.	MUST	BASIC	FK-1-1-4
RFC3261-16-145			If a matching response context is found, the element <b>MUST</b> immediately return a 200 (OK) response to the CANCEL request.	MUST	BASIC	FK-1-1-4
RFC3261-16-146			Furthermore, the element <b>MUST</b> generate CANCEL requests for all pending client transactions in the context as described in Section 16.7 step 10.	MUST	BASIC	FK-1-1-4
RFC3261-16-147			It <b>MUST</b> statelessly forward the CANCEL request (it may have statelessly forwarded the associated request previously).	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-148	16.11	Stateless Proxy	Furthermore, when handling a request statelessly, an element <b>MUST NOT</b> generate its own 100 (Trying) or any other provisional response.	MUST NOT	NOT REQUIRED	
RFC3261-16-149			A stateless proxy <b>MUST</b> validate a request as described in Section 16.3	MUST	NOT REQUIRED	
RFC3261-16-150			A stateless proxy <b>MUST</b> follow the request processing steps described in Sections 16.4 through 16.5 with the following exception:	MUST	NOT REQUIRED	
RFC3261-16-151			A stateless proxy <b>MUST</b> choose one and only one target from the target set.	MUST	NOT REQUIRED	
RFC3261-16-152			This choice <b>MUST</b> only rely on fields in the message and time-invariant properties of the server.	MUST	NOT REQUIRED	
RFC3261-16-153			In particular, a retransmitted request <b>MUST</b> be forwarded to the same destination each time it is processed.	MUST	NOT REQUIRED	
RFC3261-16-154			Furthermore, CANCEL and non-Routed ACK requests <b>MUST</b> generate the same choice as their associated INVITE.	MUST	NOT REQUIRED	
RFC3261-16-155			A stateless proxy <b>MUST</b> follow the request processing steps described in Section 16.6 with the following exceptions:	MUST	NOT REQUIRED	
RFC3261-16-156			Therefore, the component of the branch parameter that makes it unique <b>MUST</b> be the same each time a retransmitted request is forwarded.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-157			Thus for a stateless proxy, the branch parameter <b>MUST</b> be computed as a combinatoric function of message parameters which are invariant on retransmission.	MUST	NOT REQUIRED	
RFC3261-16-158			However, the following procedure is <b>RECOMMENDED</b> .	RECOMMENDED	NOT REQUIRED	
RFC3261-16-159			All other message transformations specified in Section 16.6 <b>MUST</b> result in the same transformation of a retransmitted request.	MUST	NOT REQUIRED	
RFC3261-16-160			In particular, if the proxy inserts a Record-Route value or pushes URIs into the Route header field, it <b>MUST</b> place the same values in retransmissions of the request.	MUST	NOT REQUIRED	
RFC3261-16-161			As for the Via branch parameter, this implies that the transformations <b>MUST</b> be based on time-invariant configuration or retransmission-invariant properties of the request.	MUST	NOT REQUIRED	
RFC3261-16-162			Stateless proxies <b>MUST NOT</b> perform special processing for CANCEL requests.	MUST NOT	NOT REQUIRED	
RFC3261-16-163			When a response arrives at a stateless proxy, the proxy <b>MUST</b> inspect the sent-by value in the first (topmost) Via header field value.	MUST	NOT REQUIRED	
RFC3261-16-164			If that address matches the proxy, (it equals a value this proxy has inserted into previous requests) the proxy <b>MUST</b> remove that header field value from the response and forward the result to the location indicated in the next Via header field value.	MUST	NOT REQUIRED	
RFC3261-16-165			The proxy <b>MUST NOT</b> add to, modify, or remove the message body.	MUST NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-16-166			Unless specified otherwise, the proxy <b>MUST NOT</b> remove any other header field values.	MUST NOT	NOT REQUIRED	
RFC3261-16-167			If the address does not match the proxy, the message <b>MUST</b> be silently discarded.	MUST	NOT REQUIRED	
RFC3261-17-1	17.1	Client Transaction	Because of the non-INVITE transaction's reliance on a two-way handshake, TUs <b>SHOULD</b> respond immediately to non-INVITE requests.	SHOULD	BASIC	[tester]
RFC3261-17-2	17.1.1.2	Formal Description	The initial state, "calling", <b>MUST</b> be entered when the TU initiates a new client transaction with an INVITE request.	MUST	OUT OF SCOPE	
RFC3261-17-3			The client transaction <b>MUST</b> pass the request to the transport layer for transmission (see Section 18).	MUST	OUT OF SCOPE	
RFC3261-17-4			If an unreliable transport is being used, the client transaction <b>MUST</b> start timer A with a value of T1.	MUST	BASIC	TS-1-1-1
RFC3261-17-5			If a reliable transport is being used, the client transaction <b>SHOULD NOT</b> start timer A (Timer A controls request retransmissions).	SHOULD NOT	NOT REQUIRED	
RFC3261-17-6			For any transport, the client transaction <b>MUST</b> start timer B with a value of 64*T1 seconds (Timer B controls transaction timeouts).	MUST	BASIC	TS-1-1-1
RFC3261-17-7			When timer A fires, the client transaction <b>MUST</b> retransmit the request by passing it to the transport layer, and <b>MUST</b> reset the timer with a value of 2*T1.	MUST	BASIC	TS-1-1-1

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-8				MUST	BASIC	TS-1-1-1 TP-2-1-1
RFC3261-17-9			When timer A fires 2*T1 seconds later, the request <b>MUST</b> be retransmitted again (assuming the client transaction is still in this state).	MUST	BASIC	TS-1-1-1 TP-2-1-1
RFC3261-17-10			This process <b>MUST</b> continue so that the request is retransmitted with intervals that double after each transmission.	MUST	BASIC	TS-1-1-1 TP-2-1-1
RFC3261-17-11			These retransmissions <b>SHOULD</b> only be done while the client transaction is in the "calling" state.	SHOULD	BASIC	TS-1-1-1 TS-1-1-2
RFC3261-17-12			Elements <b>MAY</b> (though it is <b>NOT RECOMMENDED</b> ) use smaller values of T1 within closed, private networks that do not permit general Internet connection.	NOT RECOMMENDED	NOT REQUIRED	TS-1-1-1
RFC3261-17-13			T1 <b>MAY</b> be chosen larger, and this is <b>RECOMMENDED</b> if it is known in advance (such as on high latency access links) that the RTT is larger.	RECOMMENDED	ADVANCED	TS-1-1-1
RFC3261-17-14			Whatever the value of T1, the exponential backoffs on retransmissions described in this section <b>MUST</b> be used.	MUST	BASIC	TS-1-1-1 TP-2-1-1
RFC3261-17-15			If the client transaction is still in the "Calling" state when timer B fires, the client transaction <b>SHOULD</b> inform the TU that a timeout has occurred.	SHOULD	BASIC	TS-1-1-1
RFC3261-17-16			The client transaction <b>MUST NOT</b> generate an ACK.	MUST NOT	BASIC	TS-1-1-1

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-17			If the client transaction receives a provisional response while in the "Calling" state, it transitions to the "Proceeding" state. In the "Proceeding" state, the client transaction <b>SHOULD NOT</b> retransmit the request any longer. Furthermore, the provisional response <b>MUST</b> be passed to the TU.	SHOULD NOT	BASIC	TS-1-1-2
RFC3261-17-18				MUST	OUT OF SCOPE	
RFC3261-17-19			Any further provisional responses <b>MUST</b> be passed up to the TU while in the "Proceeding" state.	MUST	OUT OF SCOPE	
RFC3261-17-20			When in either the "Calling" or "Proceeding" states, reception of a response with status code from 300-699 <b>MUST</b> cause the client transaction to transition to "Completed".	MUST	BASIC	TS-1-1-3
RFC3261-17-21			The client transaction <b>MUST</b> pass the received response up to the TU, and the client transaction <b>MUST</b> generate an ACK request, even if the transport is reliable (guidelines for constructing the ACK from the response are given in Section 17.1.1.3) and then pass the ACK to the transport layer for transmission.	MUST	OUT OF SCOPE	
RFC3261-17-22				MUST	BASIC	[tester]
RFC3261-17-23			The ACK <b>MUST</b> be sent to the same address, port, and transport to which the original request was sent.	MUST	BASIC	[tester]
RFC3261-17-24			The client transaction <b>SHOULD</b> start timer D when it enters the "Completed" state, with a value of at least 32 seconds for unreliable transports, and a value of zero seconds for reliable transports.	SHOULD	BASIC	TS-1-1-3
RFC3261-17-25			Any retransmissions of the final response that are received while in the "Completed" state <b>MUST</b> cause the ACK to be re-passed to the transport layer for retransmission, but the newly received response <b>MUST NOT</b> be passed up to the TU.	MUST NOT	BASIC	TS-1-1-3

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-26				MUST	OUT OF SCOPE	
RFC3261-17-27			If timer D fires while the client transaction is in the "Completed" state, the client transaction <b>MUST</b> move to the terminated state.	MUST	BASIC	TS-1-1-3
RFC3261-17-28			When in either the "Calling" or "Proceeding" states, reception of a 2xx response <b>MUST</b> cause the client transaction to enter the "Terminated" state, and the response <b>MUST</b> be passed up to the TU.	MUST	BASIC	TS-1-1-3 TS-5-1-1
RFC3261-17-29				MUST	BASIC	TS-5-1-1
RFC3261-17-30			The client transaction <b>MUST</b> be destroyed the instant it enters the "Terminated" state.	MUST	OUT OF SCOPE	
RFC3261-17-31	17.1.1.3	Construction of the ACK Request	A UAC core that generates an ACK for 2xx <b>MUST</b> instead follow the rules described in Section 13.	MUST	BASIC	[tester]
RFC3261-17-32			The ACK request constructed by the client transaction <b>MUST</b> contain values for the Call-ID, From, and Request-URI that are equal to the values of those header fields in the request passed to the transport by the client transaction (call this the "original request").	MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-17-33			The To header field in the ACK <b>MUST</b> equal the To header field in the response being acknowledged, and therefore will usually differ from the To header field in the original request by the addition of the tag parameter.	MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-17-34			The ACK <b>MUST</b> contain a single Via header field, and this <b>MUST</b> be equal to the top Via header field of the original request.	MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-35				MUST	NOT REQUIRED	generic_make_ACK_for-non2XX
RFC3261-17-36			The CSeq header field in the ACK <b>MUST</b> contain the same value for the sequence number as was present in the original request, but the method parameter <b>MUST</b> be equal to "ACK".	MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-17-37				MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-17-38			If the INVITE request whose response is being acknowledged had Route header fields, those header fields <b>MUST</b> appear in the ACK.	MUST	NOT REQUIRED	
RFC3261-17-39			Therefore, placement of bodies in ACK for non-2xx is NOT <b>RECOMMENDED</b> , but if done, the body types are restricted to any that appeared in the INVITE, assuming that the response to the INVITE was not 415.	NOT RECOMMENDED	BASIC	generic_make_ACK_for-non2XX
RFC3261-17-40	17.1.2.2	Formal Description	When entering this state, the client transaction <b>SHOULD</b> set timer F to fire in 64*T1 seconds.	SHOULD	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-41			The request <b>MUST</b> be passed to the transport layer for transmission.	MUST	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-42			If an unreliable transport is in use, the client transaction <b>MUST</b> set timer E to fire in T1 seconds.	MUST	BASIC	TS-2-1-1 TS-2-1-2 TS-2-1-3 TS-2-1-4
RFC3261-17-43			If Timer F fires while the client transaction is still in the "Trying" state, the client transaction <b>SHOULD</b> inform the TU about the timeout, and then it <b>SHOULD</b> enter the "Terminated" state.	SHOULD	BASIC	TS-2-1-1 TS-2-1-2

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-44				SHOULD	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-45			If a provisional response is received while in the "Trying" state, the response <b>MUST</b> be passed to the TU, and then the client transaction <b>SHOULD</b> move to the "Proceeding" state.	MUST	BASIC	TS-2-1-2 TS-2-1-3
RFC3261-17-46				SHOULD	BASIC	TS-2-1-2 TS-2-1-3
RFC3261-17-47				MUST	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-48			If a final response (status codes 200-699) is received while in the "Trying" state, the response <b>MUST</b> be passed to the TU, and the client transaction <b>MUST</b> transition to the "Completed" state.	MUST	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-49				MUST	BASIC	TS-2-1-3 TS-2-1-4
RFC3261-17-50				MUST	BASIC	TS-2-1-3 TS-2-1-4
RFC3261-17-51			If timer F fires while in the "Proceeding" state, the TU <b>MUST</b> be informed of a timeout, and the client transaction <b>MUST</b> transition to the terminated state.	MUST	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-52				MUST	BASIC	TS-2-1-1 TS-2-1-2

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-53			If a final response (status codes 200-699) is received while in the "Proceeding" state, the response <b>MUST</b> be passed to the TU, and the client transaction <b>MUST</b> transition to the "Completed" state.	MUST	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-54				MUST	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-55			Once the client transaction enters the "Completed" state, it <b>MUST</b> set Timer K to fire in T4 seconds for unreliable transports, and zero seconds for reliable transports.	MUST	NOT REQUIRED	
RFC3261-17-56			If Timer K fires while in this state, the client transaction <b>MUST</b> transition to the "Terminated" state.	MUST	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-57			Once the transaction is in the terminated state, it <b>MUST</b> be destroyed immediately.	MUST	BASIC	TS-2-1-1 TS-2-1-2
RFC3261-17-58	17.1.4	Handling Transport Errors	The client transaction <b>SHOULD</b> inform the TU that a transport failure has occurred, and the client transaction <b>SHOULD</b> transition directly to the "Terminated" state.	SHOULD	NOT REQUIRED	
RFC3261-17-59				SHOULD	NOT REQUIRED	
RFC3261-17-60	17.2.1	INVITE Server Transaction	The server transaction <b>MUST</b> generate a 100 (Trying) response unless it knows that the TU will generate a provisional or final response within 200 ms, in which case it <b>MAY</b> generate a 100 (Trying) response.	MUST	OUT OF SCOPE	
RFC3261-17-61			The 100 (Trying) response is constructed according to the procedures in Section 8.2.6, except that the insertion of tags in the To header field of the response (when none was present in the request) is downgraded from <b>MAY</b> to <b>SHOULD NOT</b> .	SHOULD NOT	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-62			The request <b>MUST</b> be passed to the TU.	MUST	OUT OF SCOPE	
RFC3261-17-63			So long as the server transaction is in the "Proceeding" state, each of these <b>MUST</b> be passed to the transport layer for transmission.	MUST	BASIC	TS-5-1-2
RFC3261-17-64			If a request retransmission is received while in the "Proceeding" state, the most recent provisional response that was received from the TU <b>MUST</b> be passed to the transport layer for retransmission.	MUST	BASIC	TS-5-1-3
RFC3261-17-65			If, while in the "Proceeding" state, the TU passes a 2xx response to the server transaction, the server transaction <b>MUST</b> pass this response to the transport layer for transmission.	MUST	OUT OF SCOPE	
RFC3261-17-66			The server transaction <b>MUST</b> then transition to the "Terminated" state.	MUST	OUT OF SCOPE	
RFC3261-17-67			While in the "Proceeding" state, if the TU passes a response with status code from 300 to 699 to the server transaction, the response <b>MUST</b> be passed to the transport layer for transmission, and the state machine <b>MUST</b> enter the "Completed" state.	MUST	BASIC	TS-3-1-1 TS-3-1-2 TS-3-1-4
RFC3261-17-68				MUST	BASIC	TS-3-1-1 TS-3-1-2 TS-3-1-4
RFC3261-17-69			When the "Completed" state is entered, timer H <b>MUST</b> be set to fire in 64*T1 seconds for all transports.	MUST	BASIC	TS-3-1-1 TS-3-1-2
RFC3261-17-70			Furthermore, while in the "Completed" state, if a request retransmission is received, the server <b>SHOULD</b> pass the response to the transport for retransmission.	SHOULD	BASIC	TS-3-1-1 TS-3-1-2

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-71			If an ACK is received while the server transaction is in the "Completed" state, the server transaction <b>MUST</b> transition to the "Confirmed" state.	MUST	BASIC	TS-3-1-4
RFC3261-17-72			In this case, the server transaction <b>MUST</b> transition to the "Terminated" state, and <b>MUST</b> indicate to the TU that a transaction failure has occurred.	MUST	BASIC	TS-3-1-1 TS-3-1-2
RFC3261-17-73				MUST	BASIC	TS-3-1-1 TS-3-1-2
RFC3261-17-74			Once timer I fires, the server <b>MUST</b> transition to the "Terminated" state.	MUST	OUT OF SCOPE	
RFC3261-17-75			Once the transaction is in the "Terminated" state, it <b>MUST</b> be destroyed immediately.	MUST	OUT OF SCOPE	
RFC3261-17-76	17.2.2	Non-INVITE Server Transaction	While in the "Trying" state, if the TU passes a provisional response to the server transaction, the server transaction <b>MUST</b> enter the "Proceeding" state.	MUST	OUT OF SCOPE	
RFC3261-17-77			The response <b>MUST</b> be passed to the transport layer for transmission.	MUST	OUT OF SCOPE	
RFC3261-17-78			Any further provisional responses that are received from the TU while in the "Proceeding" state <b>MUST</b> be passed to the transport layer for transmission.	MUST	OUT OF SCOPE	
RFC3261-17-79			If a retransmission of the request is received while in the "Proceeding" state, the most recently sent provisional response <b>MUST</b> be passed to the transport layer for retransmission.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-17-80			If the TU passes a final response (status codes 200-699) to the server while in the "Proceeding" state, the transaction <b>MUST</b> enter the "Completed" state, and the response <b>MUST</b> be passed to the transport layer for transmission.	MUST	BASIC	TS-4-1-1 TS-4-1-2
RFC3261-17-81				MUST	BASIC	TS-4-1-1 TS-4-1-2
RFC3261-17-82			When the server transaction enters the "Completed" state, it <b>MUST</b> set Timer J to fire in $64 * T1$ seconds for unreliable transports, and zero seconds for reliable transports.	MUST	BASIC	TS-4-1-1 TS-4-1-2
RFC3261-17-83			While in the "Completed" state, the server transaction <b>MUST</b> pass the final response to the transport layer for retransmission whenever a retransmission of the request is received.	MUST	BASIC	TS-4-1-1 TS-4-1-2
RFC3261-17-84			Any other final responses passed by the TU to the server transaction <b>MUST</b> be discarded while in the "Completed" state.	MUST	BASIC	TS-4-1-1 TS-4-1-2
RFC3261-17-85			The server transaction remains in this state until Timer J fires, at which point it <b>MUST</b> transition to the "Terminated" state.	MUST	BASIC	TS-4-1-1 TS-4-1-2
RFC3261-17-86			The server transaction <b>MUST</b> be destroyed the instant it enters the "Terminated" state.	MUST	BASIC	TS-4-1-1 TS-4-1-2
RFC3261-17-87	17.2.4	Handling Transport Errors	If those should all fail, based on the definition of failure in [4], the server transaction <b>SHOULD</b> inform the TU that a failure has occurred, and <b>SHOULD</b> transition to the terminated state.	SHOULD	OUT OF SCOPE	
RFC3261-17-88				SHOULD	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-18-1	18	Transport	It is <b>RECOMMENDED</b> that connections be kept open for some implementation-defined duration after the last message was sent or received over that connection.	RECOMMENDED	OUT OF SCOPE	
RFC3261-18-2			This duration <b>SHOULD</b> at least equal the longest amount of time the element would need in order to bring a transaction from instantiation to the terminated state.	SHOULD	OUT OF SCOPE	
RFC3261-18-3			All SIP elements <b>MUST</b> implement UDP and TCP.	MUST	NOT REQUIRED	[PRq-1]
RFC3261-18-4			It has arisen out of the need to handle larger messages, which <b>MUST</b> use TCP, as discussed below.	MUST	NOT REQUIRED	
RFC3261-18-5	18.1.1	Sending Requests	If a request is within 200 bytes of the path MTU, or if it is larger than 1300 bytes and the path MTU is unknown, the request <b>MUST</b> be sent using an RFC 2914 [43] congestion controlled transport protocol, such as TCP. If this causes a change in the transport protocol from the one indicated in the top Via, the value in the top Via <b>MUST</b> be changed.	MUST	NOT REQUIRED	
RFC3261-18-6				MUST	NOT REQUIRED	
RFC3261-18-7			However, implementations <b>MUST</b> be able to handle messages up to the maximum datagram packet size.	MUST	OUT OF SCOPE	
RFC3261-18-8			If an element sends a request over TCP because of these message size constraints, and that request would have otherwise been sent over UDP, if the attempt to establish the connection generates either an ICMP Protocol Not Supported, or results in a TCP reset, the element <b>SHOULD</b> retry the request, using UDP.	SHOULD	NOT REQUIRED	
RFC3261-18-9			A client that sends a request to a multicast address <b>MUST</b> add the "maddr" parameter to its Via header field value containing the destination multicast address, and for IPv4, <b>SHOULD</b> add the "ttl" parameter with a value of 1.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-18-10				SHOULD	NOT REQUIRED	
RFC3261-18-11			Before a request is sent, the client transport <b>MUST</b> insert a value of the "sent-by" field into the Via header field.	MUST	BASIC	generic_forward_request
RFC3261-18-12			The usage of an FQDN is <b>RECOMMENDED</b> .	RECOMMENDED	BASIC	generic_forward_request
RFC3261-18-13			Therefore, the client transport <b>MUST</b> be prepared to receive the response on the same connection used to send the request.	MUST	OUT OF SCOPE	
RFC3261-18-14			To handle this case, the transport layer <b>MUST</b> also be prepared to receive an incoming connection on the source IP address from which the request was sent and port number in the "sent-by" field.	MUST	OUT OF SCOPE	
RFC3261-18-15			It also <b>MUST</b> be prepared to receive incoming connections on any address and port that would be selected by a server based on the procedures described in Section 5 of [4].	MUST	OUT OF SCOPE	
RFC3261-18-16			For unreliable unicast transports, the client transport <b>MUST</b> be prepared to receive responses on the source IP address from which the request is sent (as responses are sent back to the source address) and the port number in the "sent-by" field.	MUST	OUT OF SCOPE	
RFC3261-18-17			The client <b>MUST</b> be prepared to receive responses on any address and port that would be selected by a server based on the procedures described in Section 5 of [4].	MUST	OUT OF SCOPE	
RFC3261-18-18			For multicast, the client transport <b>MUST</b> be prepared to receive responses on the same multicast group and port to which the request is sent (that is, it needs to be a member of the multicast group it sent the request to.)	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-18-19			If a request is destined to an IP address, port, and transport to which an existing connection is open, it is <b>RECOMMENDED</b> that this connection be used to send the request, but another connection <b>MAY</b> be opened and used.	RECOMMENDED	OUT OF SCOPE	
RFC3261-18-20	18.1.2	Receiving Responses	If the value of the "sent-by" parameter in that header field value does not correspond to a value that the client transport is configured to insert into requests, the response <b>MUST</b> be silently discarded.	MUST	NOT REQUIRED	[UA test]
RFC3261-18-21			If there is a match, the response <b>MUST</b> be passed to that transaction.	MUST	OUT OF SCOPE	
RFC3261-18-22			Otherwise, the response <b>MUST</b> be passed to the core (whether it be stateless proxy, stateful proxy, or UA) for further processing.	MUST	OUT OF SCOPE	
RFC3261-18-23	18.2.1	Receiving Requests	A server <b>SHOULD</b> be prepared to receive requests on any IP address, port and transport combination that can be the result of a DNS lookup on a SIP or SIPS URI [4] that is handed out for the purposes of communicating with that server.	SHOULD	OUT OF SCOPE	
RFC3261-18-24			It is also <b>RECOMMENDED</b> that a server listen for requests on the default SIP ports (5060 for TCP and UDP, 5061 for TLS over TCP) on all public interfaces.	RECOMMENDED	OUT OF SCOPE	
RFC3261-18-25			For any port and interface that a server listens on for UDP, it <b>MUST</b> listen on that same port and interface for TCP.	MUST	NOT REQUIRED	
RFC3261-18-26			When the server transport receives a request over any transport, it <b>MUST</b> examine the value of the "sent-by" parameter in the top Via header field value.	MUST	BASIC	FW-2-1-1

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-18-27			If the host portion of the "sent-by" parameter contains a domain name, or if it contains an IP address that differs from the packet source address, the server <b>MUST</b> add a "received" parameter to that Via header field value.	MUST	BASIC	generic_forward_request PX-1-1-1, PX-1-1-2, PX-1-1-3, PX-1-2-1 PX-1-2-2, PX-1-2-3, PX-2-1-1, PX-2-1-2 PX-2-1-3, PX-2-1-4, PX-2-1-5, PX-2-1-6 PX-2-2-1, PX-2-2-2, PX-2-2-3, PX-2-2-4 PX-2-2-5, FW-1-2-1, FW-1-2-2, FW-1-2-3 FW-1-2-4, FW-1-2-6, FW-2-1-1, FW-2-1-2 FW-2-1-3, FW-2-2-1, FW-2-2-2, FW-2-2-4 FW-4-1-1, RQ-1-1-1, RQ-1-1-2, RQ-2-1-2 RQ-2-1-3, RQ-2-1-4, RQ-2-1-5, RQ-2-1-6 RQ-3-1-3, RQ-4-1-2, RS-1-1-1, RS-1-1-2 RS-1-1-3, RS-1-1-4, RS-1-1-5, FK-1-1-1 FK-1-1-2, FK-1-1-3, FK-1-1-4, FK-1-1-5 TS-5-1-1, TS-5-1-2, TS-5-1-3, PG-1-1-1 TP-1-1-1, TP-1-2-2, TP-2-2-1, LE-1-1-1 LE-1-2-1, AU-1-1-1, AU-1-1-2
RFC3261-18-28			This parameter <b>MUST</b> contain the source address from which the packet was received.	MUST	BASIC	generic_forward_request PX-1-1-1, PX-1-1-2, PX-1-1-3, PX-1-2-1 PX-1-2-2, PX-1-2-3, PX-2-1-1, PX-2-1-2 PX-2-1-3, PX-2-1-4, PX-2-1-5, PX-2-1-6 PX-2-2-1, PX-2-2-2, PX-2-2-3, PX-2-2-4 PX-2-2-5, FW-1-2-1, FW-1-2-2, FW-1-2-3 FW-1-2-4, FW-1-2-6, FW-2-1-1, FW-2-1-2 FW-2-1-3, FW-2-2-1, FW-2-2-2, FW-2-2-4 FW-4-1-1, RQ-1-1-1, RQ-1-1-2, RQ-2-1-2 RQ-2-1-3, RQ-2-1-4, RQ-2-1-5, RQ-2-1-6 RQ-3-1-3, RQ-4-1-2, RS-1-1-1, RS-1-1-2 RS-1-1-3, RS-1-1-4, RS-1-1-5, FK-1-1-1 FK-1-1-2, FK-1-1-3, FK-1-1-4, FK-1-1-5 TS-5-1-1, TS-5-1-2, TS-5-1-3, PG-1-1-1 TP-1-1-1, TP-1-2-2, TP-2-2-1, LE-1-1-1 LE-1-2-1, AU-1-1-1, AU-1-1-2
RFC3261-18-29	18.2.2	Sending Responses	It <b>MUST</b> follow the following process:	MUST	BASIC	[tester]
RFC3261-18-30			If the "sent-protocol" is a reliable transport protocol such as TCP or SCTP, or TLS over those, the response <b>MUST</b> be sent using the existing connection to the source of the original request that created the transaction, if that connection is still open.	MUST	NOT REQUIRED	
RFC3261-18-31			If that connection is no longer open, the server <b>SHOULD</b> open a connection to the IP address in the "received" parameter, if present, using the port in the "sent-by" value, or the default port for that transport, if no port is specified.	SHOULD	OUT OF SCOPE	
RFC3261-18-32			If that connection attempt fails, the server <b>SHOULD</b> use the procedures in [4] for servers in order to determine the IP address and port to open the connection and send the response to.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-18-33			Otherwise, if the Via header field value contains a "maddr" parameter, the response <b>MUST</b> be forwarded to the address listed there, using the port indicated in "sent-by", or port 5060 if none is present.	MUST	NOT REQUIRED	[UA test]
RFC3261-18-34			If the address is a multicast address, the response <b>SHOULD</b> be sent using the TTL indicated in the "ttl" parameter, or with a TTL of 1 if that parameter is not present.	SHOULD	NOT REQUIRED	
RFC3261-18-35			Otherwise (for unreliable unicast transports), if the top Via has a "received" parameter, the response <b>MUST</b> be sent to the address in the "received" parameter, using the port indicated in the "sent-by" value, or using port 5060 if none is specified explicitly.	MUST	BASIC	FW-2-1-1 FW-2-1-2
RFC3261-18-36			If this fails, for example, elicits an ICMP "port unreachable" response, the procedures of Section 5 of [4] <b>SHOULD</b> be used to determine where to send the response.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-18-37			Otherwise, if it is not receiver-tagged, the response <b>MUST</b> be sent to the address indicated by the "sent-by" value, using the procedures in Section 5 of [4].	MUST	NOT REQUIRED	
RFC3261-18-38	18.3	Framing	If there are additional bytes in the transport packet beyond the end of the body, they <b>MUST</b> be discarded.	MUST	BASIC	TP-1-2-1 TP-1-2-2
RFC3261-18-39			If the message is a response, it <b>MUST</b> be discarded.	MUST	BASIC	TP-1-2-1 TP-1-2-2
RFC3261-18-40			If the message is a request, the element <b>SHOULD</b> generate a 400 (Bad Request) response.	SHOULD	BASIC	TP-1-2-2
RFC3261-18-41			The Content-Length header field <b>MUST</b> be used with stream oriented transports.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-18-42	18.4	Error Handling	Host, network, port or protocol unreachable errors, or parameter problem errors <b>SHOULD</b> cause the transport layer to inform the transport user of a failure in sending.	SHOULD	ADVANCED	TP-2-1-1
RFC3261-18-43			Source quench and TTL exceeded ICMP errors <b>SHOULD</b> be ignored.	SHOULD	ADVANCED	TP-2-1-2
RFC3261-18-44			If the transport user asks for a request to be sent over a reliable transport, and the result is a connection failure, the transport layer <b>SHOULD</b> inform the transport user of a failure in sending.	SHOULD	NOT REQUIRED	
RFC3261-19-1	19.1.1	SIP and SIPS URI Components	If the @ sign is present in a SIP or SIPS URI, the user field <b>MUST NOT</b> be empty.	MUST NOT	BASIC	[tester]
RFC3261-19-2			While the SIP and SIPS URI syntax allows this field to be present, its use is <b>NOT RECOMMENDED</b> , because the passing of authentication information in clear text (such as URIs) has proven to be a security risk in almost every case where it has been used.	NOT RECOMMENDED	NOT REQUIRED	
RFC3261-19-3			Using the fully-qualified domain name form is <b>RECOMMENDED</b> whenever possible.	RECOMMENDED	BASIC	[tester]
RFC3261-19-4			Even though an arbitrary number of URI parameters may be included in a URI, any given parameter-name <b>MUST NOT</b> appear more than once.	MUST NOT	OUT OF SCOPE	
RFC3261-19-5			For a SIPS URI, the transport parameter <b>MUST</b> indicate a reliable transport.	MUST	NOT REQUIRED	
RFC3261-19-6			The ttl parameter determines the time-to-live value of the UDP multicast packet and <b>MUST</b> only be used if maddr is a multicast address and the transport protocol is UDP.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-19-7			If the user string contains a telephone number formatted as a telephone-subscriber, the user parameter value "phone" <b>SHOULD</b> be present.	SHOULD	NOT REQUIRED	
RFC3261-19-8			Since the uri-parameter mechanism is extensible, SIP elements <b>MUST</b> silently ignore any uri-parameters that they do not understand.	MUST	NOT REQUIRED	
RFC3261-19-9			Elements processing URIs <b>SHOULD</b> ignore any disallowed components if they are present.	SHOULD	BASIC	FW-1-1-2
RFC3261-19-10	19.1.2	Character Escaping Requirements	Excluded US- ASCII characters (RFC 2396 [5]), such as space and control characters and characters used as URI delimiters, also <b>MUST</b> be escaped.	MUST	NOT REQUIRED	
RFC3261-19-11			URIs <b>MUST NOT</b> contain unescaped space and control characters.	MUST NOT	BASIC	generic_make_ACK_for-non2XX
RFC3261-19-12			All other characters <b>MUST</b> be escaped.	MUST	BASIC	FW-1-1-1
RFC3261-19-13			Expanding the hname and hvalue tokens in Section 25 show that all URI reserved characters in header field names and values <b>MUST</b> be escaped.	MUST	NOT REQUIRED	
RFC3261-19-14			Any characters occurring in a telephone-subscriber that do not appear in an expansion of the BNF for the user rule <b>MUST</b> be escaped.	MUST	NOT REQUIRED	
RFC3261-19-15			Current implementations <b>MUST NOT</b> attempt to improve robustness by treating received escaped characters in the host component as literally equivalent to their unescaped counterpart.	MUST NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-19-16	19.1.4	URI Comparison	Any present header component <b>MUST</b> be present in both URIs and match for the URIs to match.	MUST	OUT OF SCOPE	
RFC3261-19-17	19.1.5	Forming Requests from a URI	An implementation <b>MUST</b> include any provided transport, maddr, ttl, or user parameter in the Request-URI of the formed request.	MUST	NOT REQUIRED	[UA test]
RFC3261-19-18			If the URI contains a method parameter, its value <b>MUST</b> be used as the method of the request.	MUST	NOT REQUIRED	[UA test]
RFC3261-19-19			The method parameter <b>MUST NOT</b> be placed in the Request-URI.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-19-20			Unknown URI parameters <b>MUST</b> be placed in the message's Request-URI.	MUST	NOT REQUIRED	[UA test]
RFC3261-19-21			An implementation <b>SHOULD</b> treat the presence of any headers or body parts in the URI as a desire to include them in the message, and choose to honor the request on a per-component basis.	SHOULD	NOT REQUIRED	
RFC3261-19-22			An implementation <b>SHOULD NOT</b> honor these obviously dangerous header fields: From, Call-ID, CSeq, Via, and Record-Route.	SHOULD NOT	OUT OF SCOPE	
RFC3261-19-23			An implementation <b>SHOULD NOT</b> honor any requested Route header field values in order to not be used as an unwitting agent in malicious attacks.	SHOULD NOT	OUT OF SCOPE	
RFC3261-19-24			An implementation <b>SHOULD NOT</b> honor requests to include header fields that may cause it to falsely advertise its location or capabilities.	SHOULD NOT	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-19-25			An implementation <b>SHOULD</b> verify the accuracy of any requested descriptive header fields, including: Content-Disposition, Content-Encoding, Content-Language, Content-Length, Content-Type, Date, Mime-Version, and Timestamp.	SHOULD	OUT OF SCOPE	
RFC3261-19-26			An implementation <b>MUST NOT</b> proceed with transmitting the request.	MUST NOT	OUT OF SCOPE	
RFC3261-19-27			An implementation <b>SHOULD</b> refuse to send these requests rather than modifying them to match their capabilities.	SHOULD	OUT OF SCOPE	
RFC3261-19-28			An implementation <b>MUST NOT</b> send a request requiring an extension that it does not support.	MUST NOT	OUT OF SCOPE	
RFC3261-19-29	19.1.6	Relating SIP URIs and tel URLs	To mitigate this problem, elements constructing telephone-subscriber fields to place in the userinfo part of a SIP or SIPS URI <b>SHOULD</b> fold any case-insensitive portion of telephone-subscriber to lower case, and order the telephone-subscriber parameters lexically by parameter name, excepting <u>isdn-subaddress and post-dial</u> , which	SHOULD	NOT REQUIRED	
RFC3261-19-30	19.3	Tags	When a tag is generated by a UA for insertion into a request or response, it <b>MUST</b> be globally unique and cryptographically random with at least 32 bits of randomness.	MUST	OUT OF SCOPE	
RFC3261-20-1	20	Header Fields	m*: The header field <b>SHOULD</b> be sent, but clients/servers need to be prepared to receive messages without that header field.	SHOULD	OUT OF SCOPE	
RFC3261-20-2			t: The header field <b>SHOULD</b> be sent, but clients/servers need to be prepared to receive messages without that header field.	SHOULD	OUT OF SCOPE	
RFC3261-20-3			If a stream-based protocol (such as TCP) is used as a transport, then the header field <b>MUST</b> be sent.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-20-4			A "mandatory" header field <b>MUST</b> be present in a request, and <b>MUST</b> be understood by the UAS receiving the request.	MUST	BASIC	RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-20-5				MUST	BASIC	RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-20-6			A mandatory response header field <b>MUST</b> be present in the response, and the header field <b>MUST</b> be understood by the UAC processing the response.	MUST	BASIC	RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-20-7				MUST	BASIC	RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-20-8			"Not applicable" means that the header field <b>MUST NOT</b> be present in a request.	MUST NOT	BASIC	generic_make_CANCEL generic_make_ACK_for-non2XX RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-20-9			If one is placed in a request by mistake, it <b>MUST</b> be ignored by the UAS receiving the request.	MUST	BASIC	RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-20-10			Similarly, a header field labeled "not applicable" for a response means that the UAS <b>MUST NOT</b> place the header field in the response, and the UAC <b>MUST</b> ignore the header field in the response.	MUST NOT	BASIC	RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-20-11				MUST	BASIC	RQ-3-1-1 RQ-4-1-1 RS-1-1-6
RFC3261-20-12			A UA <b>SHOULD</b> ignore extension header parameters that are not understood.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-20-13			If the URI contains a comma, question mark or semicolon, the URI <b>MUST</b> be enclosed in angle brackets (< and >).	MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-20-14	20.1	Accept	The semantics are also identical, with the exception that if no Accept header field is present, the server <b>SHOULD</b> assume a default value of application/sdp.	SHOULD	OUT OF SCOPE	
RFC3261-20-15	20.2	Accept-Encoding	If no Accept-Encoding header field is present, the server <b>SHOULD</b> assume a default value of identity.	SHOULD	OUT OF SCOPE	
RFC3261-20-16	20.3	Accept-Language	If no Accept-Language header field is present, the server <b>SHOULD</b> assume all languages are acceptable to the client.	SHOULD	OUT OF SCOPE	
RFC3261-20-17	20.4	Alert-Info	In addition, a user <b>SHOULD</b> be able to disable this feature selectively.	SHOULD	OUT OF SCOPE	
RFC3261-20-18	20.5	Allow	All methods, including ACK and CANCEL, understood by the UA <b>MUST</b> be included in the list of methods in the Allow header field, when present.	MUST	OUT OF SCOPE	
RFC3261-20-19			The absence of an Allow header field <b>MUST NOT</b> be interpreted to mean that the UA sending the message supports no methods.	MUST NOT	NOT REQUIRED	
RFC3261-20-20	20.7	Authorization	Although not a comma-separated list, this header field name may be present multiple times, and <b>MUST NOT</b> be combined into a single header line using the usual rules described in Section 7.3.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-20-21	20.9	Call-Info	Therefore, it is <b>RECOMMENDED</b> that a UA only render the information in the Call-Info header field if it can verify the authenticity of the element that originated the header field and trusts that element.	RECOMMENDED	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-20-22	20.1	Contact	Even if the "display-name" is empty, the "name-addr" form <b>MUST</b> be used if the "addr-spec" contains a comma, semicolon, or question mark.	MUST	NOT REQUIRED	[UA test]
RFC3261-20-23	20.11	Content-Disposition	For backward-compatibility, if the Content-Disposition header field is missing, the server <b>SHOULD</b> assume bodies of Content-Type application/sdp are the disposition "session", while other content types are "render".	SHOULD	OUT OF SCOPE	
RFC3261-20-24			If the handling parameter is missing, the value "required" <b>SHOULD</b> be assumed.	SHOULD	NOT REQUIRED	
RFC3261-20-25	20.12	Content-Encoding	When present, its value indicates what additional content codings have been applied to the entity-body, and thus what decoding mechanisms <b>MUST</b> be applied in order to obtain the media-type referenced by the Content-Type header field.	MUST	NOT REQUIRED	
RFC3261-20-26			If multiple encodings have been applied to an entity-body, the content codings <b>MUST</b> be listed in the order in which they were applied.	MUST	NOT REQUIRED	
RFC3261-20-27			The server <b>MUST</b> only use encodings listed in the Accept-Encoding header field in the request.	MUST	NOT REQUIRED	
RFC3261-20-28	20.14	Content-Length	Applications <b>SHOULD</b> use this field to indicate the size of the message-body to be transferred, regardless of the media type of the entity.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-20-29			If a stream-based protocol (such as TCP) is used as transport, the header field <b>MUST</b> be used.	MUST	NOT REQUIRED	
RFC3261-20-30			If no body is present in a message, then the Content-Length header field value <b>MUST</b> be set to zero.	MUST	NOT REQUIRED	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-20-31	20.15	Content-Type	The Content-Type header field <b>MUST</b> be present if the body is not empty.	MUST	NOT REQUIRED	[UA test]
RFC3261-20-32	20.16	CSeq	The sequence number <b>MUST</b> be expressible as a 32-bit unsigned integer.	MUST	BASIC	generic_make_ACK_for-non2XX
RFC3261-20-33	20.20	From	A system <b>SHOULD</b> use the display name "Anonymous" if the identity of the client is to remain hidden.	SHOULD	NOT REQUIRED	
RFC3261-20-34			Even if the "display-name" is empty, the "name-addr" form <b>MUST</b> be used if the "addr-spec" contains a comma, question mark, or semicolon.	MUST	NOT REQUIRED	[UA test]
RFC3261-20-35	20.26	Priority	For these decisions, a message containing no Priority header field <b>SHOULD</b> be treated as if it specified a Priority of "normal".	SHOULD	NOT REQUIRED	
RFC3261-20-36			It is <b>RECOMMENDED</b> that the value of "emergency" only be used when life, limb, or property are in imminent danger.	RECOMMENDED	NOT REQUIRED	
RFC3261-20-37	20.28	Proxy-Authorization	Although not a comma-separated list, this header field name may be present multiple times, and <b>MUST NOT</b> be combined into a single header line using the usual rules described in Section 7.3.1.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-20-38	20.31	Reply-To	If the user wished to remain anonymous, the header field <b>SHOULD</b> either be omitted from the request or populated in such a way that does not reveal any private information.	SHOULD	NOT REQUIRED	
RFC3261-20-39			Even if the "display-name" is empty, the "name-addr" form <b>MUST</b> be used if the "addr-spec" contains a comma, question mark, or semicolon.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-20-40	20.32	Require	Although an optional header field, the Require <b>MUST NOT</b> be ignored if it is present.	MUST NOT	NOT REQUIRED	
RFC3261-20-41			Each option tag defines a SIP extension that <b>MUST</b> be understood to process the request.	MUST	NOT REQUIRED	
RFC3261-20-42			A UAC compliant to this specification <b>MUST</b> only include option tags corresponding to standards-track RFCs.	MUST	NOT REQUIRED	
RFC3261-20-43	20.35	Server	Implementers <b>SHOULD</b> make the Server header field a configurable option.	SHOULD	NOT REQUIRED	
RFC3261-20-44	20.37	Supported	A UA compliant to this specification <b>MUST</b> only include option tags corresponding to standards-track RFCs.	MUST	NOT REQUIRED	
RFC3261-20-45	20.41	User-Agent	Implementers <b>SHOULD</b> make the User-Agent header field a configurable option.	SHOULD	NOT REQUIRED	
RFC3261-20-46	20.42	Via	For implementations compliant to this specification, the value of the branch parameter <b>MUST</b> start with the magic cookie "z9hG4bK", as discussed in Section 8.1.1.7.	MUST	BASIC	geenric_forward_request generic_make_CANCEL
RFC3261-20-47	20.43	Warning	A system receiving this warning <b>MUST NOT</b> take any automated action.	MUST NOT	NOT REQUIRED	
RFC3261-21-1	21	Response Codes	Other HTTP/1.1 response codes <b>SHOULD NOT</b> be used.	SHOULD NOT	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-21-2	21.3.1	300 Multiple Choices	The choices <b>SHOULD</b> also be listed as Contact fields (Section 20.10).	SHOULD	NOT REQUIRED	
RFC3261-21-3	21.3.2	301 Moved Permanently	The user can no longer be found at the address in the Request-URI, and the requesting client <b>SHOULD</b> retry at the new address given by the Contact header field (Section 20.10).	SHOULD	NOT REQUIRED	
RFC3261-21-4			The requestor <b>SHOULD</b> update any local directories, address books, and user location caches with this new value and redirect future requests to the address(es) listed.	SHOULD	NOT REQUIRED	
RFC3261-21-5	21.3.3	302 Moved Temporarily	The requesting client <b>SHOULD</b> retry the request at the new address(es) given by the Contact header field (Section 20.10).	SHOULD	NOT REQUIRED	
RFC3261-21-6			If there is no explicit expiration time, the address is only valid once for recursing, and <b>MUST NOT</b> be cached for future transactions.	MUST NOT	NOT REQUIRED	
RFC3261-21-7	21.3.4	305 Use Proxy	The requested resource <b>MUST</b> be accessed through the proxy given by the Contact field.	MUST	NOT REQUIRED	
RFC3261-21-8			305 (Use Proxy) responses <b>MUST</b> only be generated by UASs.	MUST	NOT REQUIRED	
RFC3261-21-9	21.4	Request Failure 4xx	The client <b>SHOULD NOT</b> retry the same request without modification (for example, adding appropriate authorization).	SHOULD NOT	NOT REQUIRED	[UA test]
RFC3261-21-10	21.4.1	400 Bad Request	The Reason-Phrase <b>SHOULD</b> identify the syntax problem in more detail, for example, "Missing Call-ID header field".	SHOULD	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-21-11	21.4.4	403 Forbidden	Authorization will not help, and the request <b>SHOULD NOT</b> be repeated.	SHOULD NOT	NOT REQUIRED	[UA test]
RFC3261-21-12	21.4.6	405 Method Not Allowed	The response <b>MUST</b> include an Allow header field containing a list of valid methods for the indicated address.	MUST	NOT REQUIRED	[UA test]
RFC3261-21-13	21.4.8	407 Proxy Authentication Required	This code is similar to 401 (Unauthorized), but indicates that the client <b>MUST</b> first authenticate itself with the proxy.	MUST	OUT OF SCOPE	
RFC3261-21-14	21.4.10	410 Gone	If the server does not know, or has no facility to determine, whether or not the condition is permanent, the status code 404 (Not Found) <b>SHOULD</b> be used instead.	SHOULD	OUT OF SCOPE	
RFC3261-21-15	21.4.11	413 Request Entity Too Large	If the condition is temporary, the server <b>SHOULD</b> include a Retry-After header field to indicate that it is temporary and after what time the client <b>MAY</b> try again.	SHOULD	NOT REQUIRED	
RFC3261-21-16	21.4.13	415 Unsupported Media Type	The server <b>MUST</b> return a list of acceptable formats using the Accept, Accept-Encoding, or Accept-Language header field, depending on the specific problem with the content.	MUST	NOT REQUIRED	[UA test]
RFC3261-21-17	21.4.15	420 Bad Extension	The server <b>MUST</b> include a list of the unsupported extensions in an Unsupported header field in the response.	MUST	NOT REQUIRED	[UA test]
RFC3261-21-18	21.4.16	421 Extension Required	Responses with this status code <b>MUST</b> contain a Require header field listing the required extensions.	MUST	NOT REQUIRED	
RFC3261-21-19			A UAS <b>SHOULD NOT</b> use this response unless it truly cannot provide any useful service to the client.	SHOULD NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-21-20			Instead, if a desirable extension is not listed in the Supported header field, servers <b>SHOULD</b> process the request using baseline SIP capabilities and any extensions supported by the client.	SHOULD	NOT REQUIRED	
RFC3261-21-21	21.4.18	480 Temporarily Unavailable	The reason phrase <b>SHOULD</b> indicate a more precise cause as to why the callee is unavailable.	SHOULD	OUT OF SCOPE	
RFC3261-21-22			This value <b>SHOULD</b> be settable by the UA.	SHOULD	OUT OF SCOPE	
RFC3261-21-23	21.4.22	484 Address Incomplete	Additional information <b>SHOULD</b> be provided in the reason phrase.	SHOULD	NOT REQUIRED	
RFC3261-21-24	21.4.23	485 Ambiguous	It <b>MUST</b> be possible to configure a server to respond with status 404 (Not Found) or to suppress the listing of possible choices for ambiguous Request-URIs.	MUST	OUT OF SCOPE	
RFC3261-21-25	21.4.24	486 Busy Here	Status 600 (Busy Everywhere) <b>SHOULD</b> be used if the client knows that no other end system will be able to accept this call.	SHOULD	NOT REQUIRED	
RFC3261-21-26	21.5.4	503 Service Unavailable	If no Retry-After is given, the client <b>MUST</b> act as if it had received a 500 (Server Internal Error) response.	MUST	OUT OF SCOPE	
RFC3261-21-27			A client (proxy or UAC) receiving a 503 (Service Unavailable) <b>SHOULD</b> attempt to forward the request to an alternate server.	SHOULD	ADVANCED	FW-2-2-2 FW-2-2-3 FW-2-2-4
RFC3261-21-28			It <b>SHOULD NOT</b> forward any other requests to that server for the duration specified in the Retry-After header field, if present.	SHOULD NOT	ADVANCED	FW-2-2-4

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-22-1	22	Usage of HTTP Authentication	Once the originator has been identified, the recipient of the request <b>SHOULD</b> ascertain whether or not this user is authorized to make the request in question.	SHOULD	BASIC	[ORq-4]
RFC3261-22-2			Servers <b>MUST NOT</b> accept credentials using the "Basic" authorization scheme, and servers also <b>MUST NOT</b> challenge with "Basic".	MUST NOT	NOT REQUIRED	
RFC3261-22-3				MUST NOT	NOT REQUIRED	
RFC3261-22-4	22.1	Framework	Additionally, registrars and redirect servers <b>MAY</b> make use of 401 (Unauthorized) responses for authentication, but proxies <b>MUST NOT</b> , and instead <b>MAY</b> use the 407 (Proxy Authentication Required)	MUST NOT	BASIC	[tester]
RFC3261-22-5			Operators of user agents or proxy servers that will authenticate received requests <b>MUST</b> adhere to the following guidelines for creation of a realm string for their server:	MUST	OUT OF SCOPE	
RFC3261-22-6			Realm strings <b>MUST</b> be globally unique.	MUST	OUT OF SCOPE	
RFC3261-22-7			It is <b>RECOMMENDED</b> that a realm string contain a hostname or domain name, following the recommendation in Section 3.2.1 of RFC 2617 [17].	RECOMMENDED	OUT OF SCOPE	
RFC3261-22-8			Realm strings <b>SHOULD</b> present a human-readable identifier that can be rendered to a user.	SHOULD	OUT OF SCOPE	
RFC3261-22-9			For this reason, any credentials in the INVITE that were accepted by a server <b>MUST</b> be accepted by that server for the ACK.	MUST	BASIC	[tester]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-22-10			Servers <b>MUST NOT</b> attempt to challenge an ACK.	MUST NOT	BASIC	[tester]
RFC3261-22-11			Although the CANCEL method does take a response (a 2xx), servers <b>MUST NOT</b> attempt to challenge CANCEL requests since these requests cannot be resubmitted.	MUST NOT	BASIC	[tester]
RFC3261-22-12			Generally, a CANCEL request <b>SHOULD</b> be accepted by a server if it comes from the same hop that sent the request being canceled (provided that some sort of transport or network layer security association, as described in Section 26.2.1, is in place).	SHOULD	BASIC	[tester]
RFC3261-22-13			When a UAC receives a challenge, it <b>SHOULD</b> render to the user the contents of the "realm" parameter in the challenge (which appears in either a WWW-Authenticate header field or Proxy-Authenticate header field) if the UAC device does not already know of a credential for the realm in question.	SHOULD	OUT OF SCOPE	
RFC3261-22-14			A UAC <b>MUST NOT</b> re-attempt requests with the credentials that have just been rejected (though the request may be retried if the nonce was stale).	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-22-15	22.2	User-to-User Authentication	The WWW-Authenticate response-header field <b>MUST</b> be included in 401 (Unauthorized) response messages.	MUST	NOT REQUIRED	
RFC3261-22-16			When the originating UAC receives the 401 (Unauthorized), it <b>SHOULD</b> , if it is able, re-originate the request with the proper credentials.	SHOULD	NOT REQUIRED	
RFC3261-22-17			Once authentication credentials have been supplied (either directly by the user, or discovered in an internal keyring), UAs <b>SHOULD</b> cache the credentials for a given value of the To header field and "realm" and attempt to re-use these values on the next request for that destination.	SHOULD	OUT OF SCOPE	
RFC3261-22-18			When a UAC resubmits a request with its credentials after receiving a 401 (Unauthorized) or 407 (Proxy Authentication Required) response, it <b>MUST</b> increment the CSeq header field value as it would normally when sending an updated request.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-22-19	22.3	Proxy-to-User Authentication	The proxy <b>MUST</b> populate the 407 (Proxy Authentication Required) message with a Proxy-Authenticate header field value applicable to the proxy for the requested resource.	MUST	BASIC	[tester]
RFC3261-22-20			Proxies <b>MUST NOT</b> add values to the Proxy-Authorization header field.	MUST NOT	NOT REQUIRED	
RFC3261-22-21			All 407 (Proxy Authentication Required) responses <b>MUST</b> be forwarded upstream toward the UAC following the procedures for any other response.	MUST	NOT REQUIRED	
RFC3261-22-22			When the originating UAC receives the 407 (Proxy Authentication Required) it <b>SHOULD</b> , if it is able, re-originate the request with the proper credentials.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-22-23			The UAC <b>SHOULD</b> also cache the credentials used in the re-originated request.	SHOULD	NOT REQUIRED	[UA test]
RFC3261-22-24			The following rule is <b>RECOMMENDED</b> for proxy credential caching:	RECOMMENDED	NOT REQUIRED	
RFC3261-22-25			These credentials <b>MUST NOT</b> be cached across dialogs; however, if a UA is configured with the realm of its local outbound proxy, when one exists, then the UA <b>MAY</b> cache credentials for that realm across dialogs.	MUST NOT	NOT REQUIRED	[UA test]
RFC3261-22-26			When multiple proxies are used in a chain, a Proxy-Authorization header field value <b>MUST NOT</b> be consumed by any proxy whose realm does not match the "realm" parameter specified in that value.	MUST NOT	NOT REQUIRED	
RFC3261-22-27			Note that if an authentication scheme that does not support realms is used in the Proxy-Authorization header field, a proxy server <b>MUST</b> attempt to parse all Proxy-Authorization header field values to determine whether one of them has what the proxy server considers to be valid credentials.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-22-28			Because this is potentially very time-consuming in large networks, proxy servers <b>SHOULD</b> use an authentication scheme that supports realms in the Proxy-Authorization header field.	SHOULD	BASIC	[tester]
RFC3261-22-29			Each WWW-Authenticate and Proxy-Authenticate value received in responses to the forked request <b>MUST</b> be placed into the single response that is sent by the forking proxy to the UA; the ordering of these header field values is not significant.	MUST	NOT REQUIRED	
RFC3261-22-30			As noted above, multiple credentials in a request <b>SHOULD</b> be differentiated by the "realm" parameter.	SHOULD	NOT REQUIRED	
RFC3261-22-31			The same credentials <b>SHOULD</b> be used for the same realm.	SHOULD	NOT REQUIRED	
RFC3261-22-32	22.4	The Digest Authentication Scheme	Since RFC 2543 is based on HTTP Digest as defined in RFC 2069 [39], SIP servers supporting RFC 2617 <b>MUST</b> ensure they are backwards compatible with RFC 2069.	MUST	NOT REQUIRED	
RFC3261-22-33			Note, however, that SIP servers <b>MUST NOT</b> accept or request Basic authentication.	MUST NOT	OUT OF SCOPE	
RFC3261-22-34			For SIP, the 'uri' <b>MUST</b> be enclosed in quotation marks.	MUST	BASIC	generic_proxy-auth
RFC3261-22-35			RFC 2617 notes that a nonce value <b>MUST NOT</b> be sent in an Authorization (and by extension Proxy-Authorization) header field if no qop directive has been sent.	MUST NOT	BASIC	[tester]
RFC3261-22-36			However, servers <b>MUST</b> always send a "qop" parameter in WWW-Authenticate and Proxy-Authenticate header field values.	MUST	BASIC	generic_www-auth generic_proxy-auth

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-22-37			If a client receives a "qop" parameter in a challenge header field, it <b>MUST</b> send the "qop" parameter in any resulting authorization header field.	MUST	BASIC	generic_www-auth generic_proxy-auth
RFC3261-22-38			These mechanisms <b>MUST</b> be used by a server to determine if the client supports the new mechanisms in RFC 2617 that were not specified in RFC 2069.	MUST	NOT REQUIRED	[UA test]
RFC3261-23-1	23.1	S/MIME Certificates	Each user agent that supports S/MIME <b>MUST</b> contain a keyring specifically for end-users' certificates.	MUST	NOT REQUIRED	
RFC3261-23-2			Over time, users <b>SHOULD</b> use the same certificate when they populate the originating URI of signaling (the From header field) with the same address-of-record.	SHOULD	NOT REQUIRED	
RFC3261-23-3			However, users <b>SHOULD</b> acquire certificates from known public certificate authorities.	SHOULD	NOT REQUIRED	
RFC3261-23-4			However, the holder of a certificate <b>SHOULD</b> publish their certificate in any public directories as appropriate.	SHOULD	NOT REQUIRED	
RFC3261-23-5			Similarly, UACs <b>SHOULD</b> support a mechanism for importing (manually or automatically) certificates discovered in public directories corresponding to the target URIs of SIP requests.	SHOULD	NOT REQUIRED	
RFC3261-23-6	23.2	S/MIME Key Exchange	Whenever the CMS SignedData message is used in S/MIME for SIP, it <b>MUST</b> contain the certificate bearing the public key necessary to verify the signature.	MUST	NOT REQUIRED	
RFC3261-23-7			When a UAC sends a request containing an S/MIME body that initiates a dialog, or sends a non-INVITE request outside the context of a dialog, the UAC <b>SHOULD</b> structure the body as an S/MIME 'multipart/signed' CMS SignedData body.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-23-8			If the desired CMS service is EnvelopedData (and the public key of the target user is known), the UAC <b>SHOULD</b> send the EnvelopedData message encapsulated within a SignedData message.	SHOULD	NOT REQUIRED	
RFC3261-23-9			When a UAS receives a request containing an S/MIME CMS body that includes a certificate, the UAS <b>SHOULD</b> first validate the certificate, if possible, with any available root certificates for certificate authorities.	SHOULD	NOT REQUIRED	
RFC3261-23-10			The UAS <b>SHOULD</b> also determine the subject of the certificate (for S/MIME, the SubjectAltName will contain the appropriate identity) and compare this value to the From header field of the request.	SHOULD	NOT REQUIRED	
RFC3261-23-11			If the certificate cannot be verified, because it is self-signed, or signed by no known authority, or if it is verifiable but its subject does not correspond to the From header field of request, the UAS <b>MUST</b> notify its user of the status of the certificate (including the subject of the certificate, its signer, and any key fingerprint information) and request explicit permission before proceeding.	MUST	NOT REQUIRED	
RFC3261-23-12			If the certificate was successfully verified and the subject of the certificate corresponds to the From header field of the SIP request, or if the user (after notification) explicitly authorizes the use of the certificate, the UAS <b>SHOULD</b> add this certificate to a local keyring, indexed by the address-of-record of the holder of the certificate.	SHOULD	NOT REQUIRED	
RFC3261-23-13			When a UAS sends a response containing an S/MIME body that answers the first request in a dialog, or a response to a non-INVITE request outside the context of a dialog, the UAS <b>SHOULD</b> structure the body as an S/MIME 'multipart/signed' CMS SignedData body.	SHOULD	NOT REQUIRED	
RFC3261-23-14			If the desired CMS service is EnvelopedData, the UAS <b>SHOULD</b> send the EnvelopedData message encapsulated within a SignedData message.	SHOULD	NOT REQUIRED	
RFC3261-23-15			When a UAC receives a response containing an S/MIME CMS body that includes a certificate, the UAC <b>SHOULD</b> first validate the certificate, if possible, with any appropriate root certificate.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-23-16			The UAC <b>SHOULD</b> also determine the subject of the certificate and compare this value to the To field of the response; although the two may very well be different, and this is not necessarily indicative of a security breach.	SHOULD	NOT REQUIRED	
RFC3261-23-17			If the certificate cannot be verified because it is self-signed, or signed by no known authority, the UAC <b>MUST</b> notify its user of the status of the certificate (including the subject of the certificate, its signator, and any key fingerprint information) and request explicit permission before proceeding.	MUST	NOT REQUIRED	
RFC3261-23-18			If the certificate was successfully verified, and the subject of the certificate corresponds to the To header field in the response, or if the user (after notification) explicitly authorizes the use of the certificate, the UAC <b>SHOULD</b> add this certificate to a local keyring, indexed by the address-of-record of the holder of the certificate.	SHOULD	NOT REQUIRED	
RFC3261-23-19			If the UAC had not transmitted its own certificate to the UAS in any previous transaction, it <b>SHOULD</b> use a CMS SignedData body for its next request or response.	SHOULD	NOT REQUIRED	
RFC3261-23-20			On future occasions, when the UA receives requests or responses that contain a From header field corresponding to a value in its keyring, the UA <b>SHOULD</b> compare the certificate offered in these messages with the existing certificate in its keyring.	SHOULD	NOT REQUIRED	
RFC3261-23-21			If there is a discrepancy, the UA <b>MUST</b> notify its user of a change of the certificate (preferably in terms that indicate that this is a potential security breach) and acquire the user's permission before continuing to process the signaling.	MUST	NOT REQUIRED	
RFC3261-23-22			If the user authorizes this certificate, it <b>SHOULD</b> be added to the keyring alongside any previous value(s) for this address-of-record.	SHOULD	NOT REQUIRED	
RFC3261-23-23			If a UA receives an S/MIME body that has been encrypted with a public key unknown to the recipient, it <b>MUST</b> reject the request with a 493 (Undecipherable) response.	MUST	NOT REQUIRED	
RFC3261-23-24			This response <b>SHOULD</b> contain a valid certificate for the respondent (corresponding, if possible, to any address of record given in the To header field of the rejected request) within a MIME body with a 'certs-only' "smime-type" parameter.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-23-25			Note that a user agent that receives a request containing an S/MIME body that is not optional (with a Content-Disposition header "handling" parameter of "required") <b>MUST</b> reject the request with a 415 Unsupported Media Type response if the MIME type is not understood.	MUST	NOT REQUIRED	
RFC3261-23-26			A user agent that receives such a response when S/MIME is sent <b>SHOULD</b> notify its user that the remote device does not support S/MIME, and it <b>MAY</b> subsequently resend the request without S/MIME, if appropriate; however, this 415 response may constitute a downgrade attack.	SHOULD	NOT REQUIRED	
RFC3261-23-27			If a user agent sends an S/MIME body in a request, but receives a response that contains a MIME body that is not secured, the UAC <b>SHOULD</b> notify its user that the session could not be secured.	SHOULD	NOT REQUIRED	
RFC3261-23-28			However, if a user agent that supports S/MIME receives a request with an unsecured body, it <b>SHOULD NOT</b> respond with a secured body, but if it expects S/MIME from the sender (for example, because the sender's From header field value corresponds to an identity on its keychain), the UAS <b>SHOULD</b> notify its user that the session could not be secured.	SHOULD NOT	NOT REQUIRED	
RFC3261-23-29				SHOULD	NOT REQUIRED	
RFC3261-23-30			Finally, if during the course of a dialog a UA receives a certificate in a CMS SignedData message that does not correspond with the certificates previously exchanged during a dialog, the UA <b>MUST</b> notify its user of the change, preferably in terms that indicate that this is a potential security breach.	MUST	NOT REQUIRED	
RFC3261-23-31	23.3	Securing MIME bodies	"multipart/signed" <b>MUST</b> be used only with CMS detached signatures.	MUST	NOT REQUIRED	
RFC3261-23-32			S/MIME bodies <b>SHOULD</b> have a Content-Disposition header field, and the value of the "handling" parameter <b>SHOULD</b> be "required."	SHOULD	NOT REQUIRED	
RFC3261-23-33				SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-23-34			UACs MAY send an initial request such as an OPTIONS message with a CMS detached signature in order to solicit the certificate of the remote side (the signature SHOULD be over a "message/sip" body of the type described in Section 23.4).	SHOULD	NOT REQUIRED	
RFC3261-23-35			Senders of S/MIME bodies SHOULD use the "SMIMECapabilities" (see Section 2.5.2 of [24]) attribute to express their capabilities and preferences for further communications.	SHOULD	NOT REQUIRED	
RFC3261-23-36			S/MIME implementations MUST at a minimum support SHA1 as a digital signature algorithm, and 3DES as an encryption algorithm.	MUST	NOT REQUIRED	
RFC3261-23-37			Each S/MIME body in a SIP message SHOULD be signed with only one certificate.	SHOULD	NOT REQUIRED	
RFC3261-23-38			Parallel signatures SHOULD NOT be used.	SHOULD NOT	NOT REQUIRED	
RFC3261-23-39	23.4	SIP Header Privacy and Integrity using S/MIME: Tunneling SIP	If a UAS receives a request that contains a tunneled "message/sip" S/MIME body, it SHOULD include a tunneled "message/sip" body in the response with the same smime-type.	SHOULD	NOT REQUIRED	
RFC3261-23-40			Any traditional MIME bodies (such as SDP) SHOULD be attached to the "inner" message so that they can also benefit from S/MIME security.	SHOULD	NOT REQUIRED	
RFC3261-23-41	23.4.1	Integrity and Confidentiality Properties of SIP Headers	Note that for the purposes of loose timestamping, all SIP messages that tunnel "message/sip" SHOULD contain a Date header in both the "inner" and "outer" headers.	SHOULD	NOT REQUIRED	
RFC3261-23-42	23.4.1.1	Integrity	If these header fields are not intact end-to-end, implementations SHOULD NOT consider this a breach of security.	SHOULD NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-23-43			Changes to any other header fields defined in this document constitute an integrity violation; users <b>MUST</b> be notified of a discrepancy.	MUST	NOT REQUIRED	
RFC3261-23-44	23.4.1.2	Confidentiality	If the From header field in an encrypted body differs from the value in the "outer" message, the value within the encrypted body <b>SHOULD</b> be displayed to the user, but <b>MUST NOT</b> be used in the "outer" header fields of any future messages.	SHOULD	NOT REQUIRED	
RFC3261-23-45				MUST NOT	NOT REQUIRED	
RFC3261-23-46			They <b>SHOULD NOT</b> however be used in the "outer" headers of any future messages.	SHOULD NOT	NOT REQUIRED	
RFC3261-23-47			If present, the Date header field <b>MUST</b> always be the same in the "inner" and "outer" headers.	MUST	NOT REQUIRED	
RFC3261-23-48			UAs <b>SHOULD</b> never include these in an "inner" message if they are not included in the "outer" message.	SHOULD	NOT REQUIRED	
RFC3261-23-49			UAs that receive any of these header fields in an encrypted body <b>SHOULD</b> ignore the encrypted values.	SHOULD	NOT REQUIRED	
RFC3261-23-50			If a SIP UA encounters an unknown header field with an integrity violation, it <b>MUST</b> ignore the header field.	MUST	NOT REQUIRED	
RFC3261-23-51	23.4.2	Tunneling Integrity and Authentication	In order to eliminate possible confusions about the addition or subtraction of entire header fields, senders <b>SHOULD</b> replicate all header fields from the request within the signed body.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-23-52			Any message bodies that require integrity protection <b>MUST</b> be attached to the "inner" message.	MUST	NOT REQUIRED	
RFC3261-23-53			If a Date header is present in a message with a signed body, the recipient <b>SHOULD</b> compare the header field value with its own internal clock, if applicable.	SHOULD	NOT REQUIRED	
RFC3261-23-54			If a significant time discrepancy is detected (on the order of an hour or more), the user agent <b>SHOULD</b> alert the user to the anomaly, and note that it is a potential security breach.	SHOULD	NOT REQUIRED	
RFC3261-23-55			UAs <b>SHOULD</b> notify users of this circumstance and request explicit guidance on how to proceed.	SHOULD	NOT REQUIRED	
RFC3261-23-56	23.4.3	Tunneling Encryption	The message must first be decrypted, and the "inner" From header field <b>MUST</b> be used as an index.	MUST	NOT REQUIRED	
RFC3261-23-57			In order to provide end-to-end integrity, encrypted "message/sip" MIME bodies <b>SHOULD</b> be signed by the sender.	SHOULD	NOT REQUIRED	
RFC3261-25-1	25.1	Basic Rules	These special characters <b>MUST</b> be in a quoted string to be used within a parameter value.	MUST	BASIC	[tester]
RFC3261-25-2			Note, however, that any characters allowed there that are not allowed in the user part of the SIP URI <b>MUST</b> be escaped.	MUST	OUT OF SCOPE	
RFC3261-26-1	26.2.1	Transport and Network Layer Security	The TLS_RSA_WITH_AES_128_CBC_SHA ciphersuite [6] <b>MUST</b> be supported at a minimum by implementers when TLS is used in a SIP application.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-26-2			For purposes of backwards compatibility, proxy servers, redirect servers, and registrars <b>SHOULD</b> support TLS_RSA_WITH_3DES_EDE_CBC_SHA.	SHOULD	NOT REQUIRED	
RFC3261-26-3	26.2.2	SIPS URI Scheme	The use of SIPS in particular entails that mutual TLS authentication <b>SHOULD</b> be employed, as <b>SHOULD</b> the ciphersuite TLS_RSA_WITH_AES_128_CBC_SHA.	SHOULD	NOT REQUIRED	
RFC3261-26-4				SHOULD	NOT REQUIRED	
RFC3261-26-5			Certificates received in the authentication process <b>SHOULD</b> be validated with root certificates held by the client; failure to validate a certificate <b>SHOULD</b> result in the failure of the request.	SHOULD	NOT REQUIRED	
RFC3261-26-6				SHOULD	NOT REQUIRED	
RFC3261-26-7	26.3.1	Requirements for Implementers of SIP	Proxy servers, redirect servers, and registrars <b>MUST</b> implement TLS, and <b>MUST</b> support both mutual and one-way authentication.	MUST	NOT REQUIRED	
RFC3261-26-8				MUST	NOT REQUIRED	
RFC3261-26-9			It is strongly <b>RECOMMENDED</b> that UAs be capable initiating TLS; UAs <b>MAY</b> also be capable of acting as a TLS server.	RECOMMENDED	NOT REQUIRED	
RFC3261-26-10			Proxy servers, redirect servers, and registrars <b>SHOULD</b> possess a site certificate whose subject corresponds to their canonical hostname.	SHOULD	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-26-11			All SIP elements that support TLS <b>MUST</b> have a mechanism for validating certificates received during TLS negotiation; this entails possession of one or more root certificates issued by certificate authorities (preferably well-known distributors of site certificates comparable to those that issue root certificates for web browsers).	MUST	NOT REQUIRED	
RFC3261-26-12			All SIP elements that support TLS <b>MUST</b> also support the SIPS URI scheme.	MUST	NOT REQUIRED	
RFC3261-26-13			When a UA attempts to contact a proxy server, redirect server, or registrar, the UAC <b>SHOULD</b> initiate a TLS connection over which it will send SIP messages.	SHOULD	NOT REQUIRED	
RFC3261-26-14			Proxy servers, redirect servers, registrars, and UAs <b>MUST</b> implement Digest Authorization, encompassing all of the aspects required in 22.	MUST	NOT REQUIRED	
RFC3261-26-15			Proxy servers, redirect servers, and registrars <b>SHOULD</b> be configured with at least one Digest realm, and at least one "realm" string supported by a given server <b>SHOULD</b> correspond to the server's hostname or domainname.	SHOULD	BASIC	[tester]
RFC3261-26-16				SHOULD	BASIC	[tester]
RFC3261-26-17			If a UA holds one or more root certificates of certificate authorities in order to validate certificates for TLS or IPSec, it <b>SHOULD</b> be capable of reusing these to verify S/MIME certificates, as appropriate.	SHOULD	NOT REQUIRED	
RFC3261-26-18	26.3.2.1	Registration	When a UA comes online and registers with its local administrative domain, it <b>SHOULD</b> establish a TLS connection with its registrar (Section 10 describes how the UA reaches its registrar).	SHOULD	NOT REQUIRED	
RFC3261-26-19			The registrar <b>SHOULD</b> offer a certificate to the UA, and the site identified by the certificate <b>MUST</b> correspond with the domain in which the UA intends to register; for example, if the UA intends to register the address-of-record 'alice@atlanta.com', the site certificate must identify a host within the atlanta.com domain (such as	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-26-20			sip.atlanta.com).	MUST	NOT REQUIRED	
RFC3261-26-21			When it receives the TLS Certificate message, the UA <b>SHOULD</b> verify the certificate and inspect the site identified by the certificate.	SHOULD	NOT REQUIRED	
RFC3261-26-22			If the certificate is invalid, revoked, or if it does not identify the appropriate party, the UA <b>MUST NOT</b> send the REGISTER message and otherwise proceed with the registration.	MUST NOT	NOT REQUIRED	
RFC3261-26-23			The UA then creates a REGISTER request that <b>SHOULD</b> be addressed to a Request-URI corresponding to the site certificate received from the registrar.	SHOULD	NOT REQUIRED	
RFC3261-26-24			When the UA sends the REGISTER request over the existing TLS connection, the registrar <b>SHOULD</b> challenge the request with a 401 (Proxy Authentication Required) response.	SHOULD	NOT REQUIRED	
RFC3261-26-25			The "realm" parameter within the Proxy-Authenticate header field of the response <b>SHOULD</b> correspond to the domain previously given by the site certificate.	SHOULD	NOT REQUIRED	
RFC3261-26-26			When the UAC receives the challenge, it <b>SHOULD</b> either prompt the user for credentials or take an appropriate credential from a keyring corresponding to the "realm" parameter in the challenge.	SHOULD	NOT REQUIRED	
RFC3261-26-27			The username of this credential <b>SHOULD</b> correspond with the "userinfo" portion of the URI in the To header field of the REGISTER request.	SHOULD	OUT OF SCOPE	
RFC3261-26-28			Once the registration has been accepted by the registrar, the UA <b>SHOULD</b> leave this TLS connection open provided that the registrar also acts as the proxy server to which requests are sent for users in this administrative domain.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-26-29	26.3.2.2	Interdomain Requests	Assuming that the client has completed the registration process described in the preceding section, it <b>SHOULD</b> reuse the TLS connection to the local proxy server when it sends an INVITE request to another user.	SHOULD	NOT REQUIRED	
RFC3261-26-30			The UA <b>SHOULD</b> reuse cached credentials in the INVITE to avoid prompting the user unnecessarily.	SHOULD	NOT REQUIRED	
RFC3261-26-31			When the local outbound proxy server has validated the credentials presented by the UA in the INVITE, it <b>SHOULD</b> inspect the Request-URI to determine how the message should be routed (see [4]).	SHOULD	OUT OF SCOPE	
RFC3261-26-32			The local outbound proxy server at atlanta.com <b>SHOULD</b> therefore establish a TLS connection with the remote proxy server at biloxi.com.	SHOULD	NOT REQUIRED	
RFC3261-26-33			Since both of the participants in this TLS connection are servers that possess site certificates, mutual TLS authentication <b>SHOULD</b> occur.	SHOULD	NOT REQUIRED	
RFC3261-26-34			Each side of the connection <b>SHOULD</b> verify and inspect the certificate of the other, noting the domain name that appears in the certificate for comparison with the header fields of SIP messages.	SHOULD	OUT OF SCOPE	
RFC3261-26-35			The atlanta.com proxy server, for example, <b>SHOULD</b> verify at this stage that the certificate received from the remote side corresponds with the biloxi.com domain.	SHOULD	OUT OF SCOPE	
RFC3261-26-36			The proxy server at biloxi.com <b>SHOULD</b> inspect the certificate of the proxy server at atlanta.com in turn and compare the domain asserted by the certificate with the "domainname" portion of the From header field in the INVITE request.	SHOULD	OUT OF SCOPE	
RFC3261-26-37			Once the INVITE has been approved by the biloxi proxy, the proxy server <b>SHOULD</b> identify the existing TLS channel, if any, associated with the user targeted by this request (in this case "bob@biloxi.com").	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-26-38			Before they forward the request, both proxy servers <b>SHOULD</b> add a Record-Route header field to the request so that all future requests in this dialog will pass through the proxy servers.	SHOULD	BASIC	[ORq-2]
RFC3261-26-39	26.3.2.3	Peer-to-Peer Requests	When Carol wishes to send an INVITE to "bob@biloxi.com", her UA <b>SHOULD</b> initiate a TLS connection with the biloxi proxy directly (using the mechanism described in [4] to determine how to best to reach the given Request-URI).	SHOULD	NOT REQUIRED	
RFC3261-26-40			When her UA receives a certificate from the biloxi proxy, it <b>SHOULD</b> be verified normally before she passes her INVITE across the TLS connection.	SHOULD	NOT REQUIRED	
RFC3261-26-41			Carol <b>SHOULD</b> then establish a TCP connection with the designated address and send a new INVITE with a Request-URI containing the received contact address (recomputing the signature in the body as the request is readied).	SHOULD	NOT REQUIRED	
RFC3261-26-42	26.3.2.4	DoS Protection	When the host on which a SIP proxy server is operating is routable from the public Internet, it <b>SHOULD</b> be deployed in an administrative domain with defensive operational policies (blocking source-routed traffic, preferably filtering ping traffic).	SHOULD	OUT OF SCOPE	
RFC3261-26-43			UAs and proxy servers <b>SHOULD</b> challenge questionable requests with only a single 401 (Unauthorized) or 407 (Proxy Authentication Required), forgoing the normal response retransmission algorithm, and thus behaving statelessly towards unauthenticated requests.	SHOULD	BASIC	[tester]
RFC3261-26-44	26.4.2	S/MIME	For that reason, it is <b>RECOMMENDED</b> that TCP should be used as a transport protocol when S/MIME tunneling is employed.	RECOMMENDED	NOT REQUIRED	
RFC3261-26-45	26.4.4	SIPS URIs	To address these concerns, it is <b>RECOMMENDED</b> that recipients of a request whose Request-URI contains a SIP or SIPS URI inspect the To header field value to see if it contains a SIPS URI (though note that it does not constitute a breach of security if this URI has the same scheme but is not <u>equivalent to the URI in the To header</u>	RECOMMENDED	NOT REQUIRED	
RFC3261-26-46			If the UAS has reason to believe that the scheme of the Request-URI has been improperly modified in transit, the UA <b>SHOULD</b> notify its user of a potential security breach.	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3261-26-47	26.5	Privacy	A user location service can infringe on the privacy of the recipient of a session invitation by divulging their specific whereabouts to the caller; an implementation consequently <b>SHOULD</b> be able to restrict, on a per-user basis, what kind of location and availability information is given out to certain classes of callers.	SHOULD	NOT REQUIRED	
RFC3261-27-1	27.1	Option Tags	The name <b>MAY</b> be of any length, but <b>SHOULD</b> be no more than twenty characters long.	SHOULD	NOT REQUIRED	
RFC3261-27-2			The name <b>MUST</b> consist of alphanum (Section 25) characters only.	MUST	NOT REQUIRED	
RFC3261-28-1	28.1	Major Functional Changes	This was changed to <b>MUST</b> .	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC2617-1-1	1.2	Access Authentication Framework	This response <b>MUST</b> include a WWW-Authenticate header field containing at least one challenge applicable to the requested resource.	MUST	NOT REQUIRED	[Register tester]
RFC2617-1-2			The 407 (Proxy Authentication Required) response message is used by a proxy to challenge the authorization of a client and <b>MUST</b> include a Proxy-Authenticate header field containing at least one challenge applicable to the proxy for the requested resource.	MUST	BASIC	[tester]
RFC2617-1-3			The user agent <b>MUST</b> choose to use one of the challenges with the strongest auth-scheme it understands and request credentials from the user based upon that challenge.	MUST	OUT OF SCOPE	
RFC2617-1-4			If the origin server does not wish to accept the credentials sent with a request, it <b>SHOULD</b> return a 401 (Unauthorized) response.	SHOULD	NOT REQUIRED	
RFC2617-1-5			The response <b>MUST</b> include a WWW-Authenticate header field containing at least one (possibly new) challenge applicable to the requested resource.	MUST	NOT REQUIRED	[Register tester]
RFC2617-1-6			If a proxy does not accept the credentials sent with a request, it <b>SHOULD</b> return a 407 (Proxy Authentication Required).	SHOULD	NOT REQUIRED	
RFC2617-1-7			The response <b>MUST</b> include a Proxy-Authenticate header field containing a (possibly new) challenge applicable to the proxy for the requested resource.	MUST	BASIC	[tester]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC2617-1-8			Proxies <b>MUST</b> be completely transparent regarding user agent authentication by origin servers.	MUST	NOT REQUIRED	
RFC2617-2-1	2	Basic Authentication Scheme	A client <b>SHOULD</b> assume that all paths at or deeper than the depth of the last symbolic element in the path field of the Request-URI also are within the protection space specified by the Basic realm value of the current challenge.	SHOULD	OUT OF SCOPE	
RFC2617-3-1	3.2.1	The WWW-Authenticate Response Header	qop-options This directive is optional, but is made so only for backward compatibility with RFC 2069 [6]; it <b>SHOULD</b> be used by all implementations compliant with this version of the Digest scheme.	SHOULD	BASIC	generic_www-auth generic_proxy-auth
RFC2617-3-2			Unrecognized options <b>MUST</b> be ignored.	MUST	NOT REQUIRED	
RFC2617-3-3			Any unrecognized directive <b>MUST</b> be ignored.	MUST	NOT REQUIRED	
RFC2617-3-4	3.2.2	The Authorization Request Header	If present, its value <b>MUST</b> be one of the alternatives the server indicated it supports in the WWW-Authenticate header.	MUST	OUT OF SCOPE	[UA test]
RFC2617-3-5			This directive is optional in order to preserve backward compatibility with a minimal implementation of RFC 2069 [6], but <b>SHOULD</b> be used if the server indicated that qop is supported by providing a qop directive in the WWW-Authenticate header field.	SHOULD	OUT OF SCOPE	[UA test]
RFC2617-3-6			nonce This <b>MUST</b> be specified if a qop directive is sent (see above), and <b>MUST NOT</b> be specified if the server did not send a qop directive in the WWW-Authenticate header field.	MUST	OUT OF SCOPE	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC2617-3-7				MUST NOT	OUT OF SCOPE	[UA test]
RFC2617-3-8			nonce-count This <b>MUST</b> be specified if a qop directive is sent (see above), and <b>MUST NOT</b> be specified if the server did not send a qop directive in the WWW-Authenticate header field.	MUST	OUT OF SCOPE	[UA test]
RFC2617-3-9				MUST NOT	OUT OF SCOPE	[UA test]
RFC2617-3-10			Any unrecognized directive <b>MUST</b> be ignored.	MUST	OUT OF SCOPE	
RFC2617-3-11	3.2.2.5	Various considerations	This may be "*", an "absoluteURL" or an "abs_path" as specified in section 5.1.2 of [2], but it <b>MUST</b> agree with the Request-URI.	MUST	NOT REQUIRED	
RFC2617-3-12			In particular, it <b>MUST</b> be an "absoluteURL" if the Request-URI is an "absoluteURL".	MUST	NOT REQUIRED	
RFC2617-3-13			The authenticating server must assure that the resource designated by the "uri" directive is the same as the resource specified in the Request-Line; if they are not, the server <b>SHOULD</b> return a 400 Bad Request error.	SHOULD	NOT REQUIRED	
RFC2617-3-14			The HTTP/1.1 protocol specifies that when a shared cache (see section 13.7 of [2]) has received a request containing an Authorization header and a response from relaying that request, it <b>MUST NOT</b> return that response as a reply to any other request, unless one of two Cache-Control (see section 14.9 of [2]) directives was present in the response.	MUST NOT	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC2617-3-15			If the original response included the "must-revalidate" Cache-Control directive, the cache MAY use the entity of that response in replying to a subsequent request, but <b>MUST</b> first revalidate it with the origin server, using the request headers from the new request to allow the origin server to authenticate the new request.	MUST	NOT REQUIRED	
RFC2617-3-16	3.2.3	The Authentication-Info Header	If the nextnonce field is present the client <b>SHOULD</b> use it when constructing the Authorization header for its next request.	SHOULD	OUT OF SCOPE	
RFC2617-3-17			The server <b>SHOULD</b> use the same value for the message-qop directive in the response as was sent by the client in the corresponding request.	SHOULD	NOT REQUIRED	
RFC2617-3-18			The "nonce-value" and "nc-value" <b>MUST</b> be the ones for the client request to which this message is the response.	MUST	OUT OF SCOPE	
RFC2617-3-19			The "response-auth", "nonce", and "nonce-count" directives <b>MUST BE</b> present if "qop=auth" or "qop=auth-int" is specified.	MUST	NOT REQUIRED	
RFC2617-4-1	4.1	Authentication of Clients using Basic Authentication	Because Basic authentication involves the cleartext transmission of passwords it <b>SHOULD NOT</b> be used (without enhancements) to protect sensitive or valuable information.	SHOULD NOT	NOT REQUIRED	
RFC2617-4-2			Server implementers <b>SHOULD</b> guard against the possibility of this sort of counterfeiting by gateways or CGI scripts.	SHOULD	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC2617-4-3	4.6	Weakness Created by Multiple Authentication Schemes	A user agent <b>MUST</b> choose to use the strongest auth- scheme it understands and request credentials from the user based upon that challenge.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-4-1	4	Protocol Operation	However, it <b>MUST NOT</b> generate a new offer if it has received an offer which it has not yet answered or rejected.	MUST NOT	OUT OF SCOPE	
RFC3264-4-2			Furthermore, it <b>MUST NOT</b> generate a new offer if it has generated a prior offer for which it has not yet received an answer or a rejection.	MUST NOT	OUT OF SCOPE	
RFC3264-5-1	5	Generating the Initial Offer	The offer (and answer) <b>MUST</b> be a valid SDP message, as defined by RFC 2327 [1], with one exception.	MUST	OUT OF SCOPE	[UA test]
RFC3264-5-2			The numeric value of the session id and version in the o line <b>MUST</b> be representable with a 64 bit signed integer.	MUST	OUT OF SCOPE	[UA test]
RFC3264-5-3			The initial value of the version <b>MUST</b> be less than $(2^{*}62)-1$ , to avoid rollovers.	MUST	OUT OF SCOPE	[UA test]
RFC3264-5-4			Although the SDP specification allows for multiple session descriptions to be concatenated together into a large SDP message, an SDP message used in the offer/answer model <b>MUST</b> contain exactly one session description.	MUST	OUT OF SCOPE	[UA test]
RFC3264-5-5			For unicast sessions, it is <b>RECOMMENDED</b> that it consist of a single space character (0x20) or a dash (-).	RECOMMENDED	OUT OF SCOPE	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-5-6			In that case, the "t=" line <b>SHOULD</b> have a value of "0 0".	SHOULD	OUT OF SCOPE	[UA test]
RFC3264-5-7	5.1	Unicast Streams	If the offerer wishes to only send media on a stream to its peer, it <b>MUST</b> mark the stream as sendonly with the "a=sendonly" attribute.	MUST	NOT REQUIRED	[UA test]
RFC3264-5-8			If the offerer wishes to only receive media from its peer, it <b>MUST</b> mark the stream as recvonly.	MUST	OUT OF SCOPE	
RFC3264-5-9			If the offerer wishes to communicate, but wishes to neither send nor receive media at this time, it <b>MUST</b> mark the stream with an "a=inactive" attribute.	MUST	OUT OF SCOPE	
RFC3264-5-10			A port number of zero in the offer indicates that the stream is offered but <b>MUST NOT</b> be used.	MUST NOT	OUT OF SCOPE	
RFC3264-5-11			For a sendonly stream, the offer <b>SHOULD</b> indicate those formats the offerer is willing to send for this stream.	SHOULD	OUT OF SCOPE	
RFC3264-5-12			For a recvonly stream, the offer <b>SHOULD</b> indicate those formats the offerer is willing to receive for this stream.	SHOULD	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-5-13			For a sendrecv stream, the offer <b>SHOULD</b> indicate those codecs that the offerer is willing to send and receive with.	SHOULD	OUT OF SCOPE	
RFC3264-5-14			However, for sendonly and sendrecv streams, the answer might indicate different payload type numbers for the same codecs, in which case, the offerer <b>MUST</b> send with the payload type numbers from the answer.	MUST	OUT OF SCOPE	
RFC3264-5-15			In the case of RTP streams, all media descriptions <b>SHOULD</b> contain "a=rtpmap" mappings from RTP payload types to encodings.	SHOULD	OUT OF SCOPE	
RFC3264-5-16			In all cases, the formats in the "m=" line <b>MUST</b> be listed in order of preference, with the first format listed being preferred.	MUST	OUT OF SCOPE	
RFC3264-5-17			In this case, preferred means that the recipient of the offer <b>SHOULD</b> use the format with the highest preference that is acceptable to it.	SHOULD	OUT OF SCOPE	
RFC3264-5-18			Theptime attribute <b>MUST</b> be greater than zero.	MUST	OUT OF SCOPE	[UA test]
RFC3264-5-19			First, when receiving multiple streams of the same type, each stream <b>MUST</b> be mapped to at least one sink for the purpose of presentation to the user.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-5-20			Another constraint is that when multiple streams are received and sent to the same sink, they <b>MUST</b> be combined in some media specific way.	MUST	OUT OF SCOPE	
RFC3264-5-21			The third constraint is that if multiple sources are mapped to the same stream, those sources <b>MUST</b> be combined in some media specific way before they are sent on the stream.	MUST	OUT OF SCOPE	
RFC3264-5-22			Once the offerer has sent the offer, it <b>MUST</b> be prepared to receive media for any recvonly streams described by that offer.	MUST	OUT OF SCOPE	
RFC3264-5-23			It <b>MUST</b> be prepared to send and receive media for any sendrecv streams in the offer, and send media for any sendonly streams in the offer (of course, it cannot actually send until the peer provides an answer with the needed address and port information).	MUST	OUT OF SCOPE	
RFC3264-6-1	6	Generating the Answer	If the answer is different from the offer in any way (different IP addresses, ports, etc.), the origin line <b>MUST</b> be different in the answer, since the answer is generated by a different entity.	MUST	OUT OF SCOPE	
RFC3264-6-2			For each "m=" line in the offer, there <b>MUST</b> be a corresponding "m=" line in the answer.	MUST	OUT OF SCOPE	[UA test]
RFC3264-6-3			The answer <b>MUST</b> contain exactly the same number of "m=" lines as the offer.	MUST	OUT OF SCOPE	[UA test]

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-6-4			This implies that if the offer contained zero "m=" lines, the answer <b>MUST</b> contain zero "m=" lines.	MUST	OUT OF SCOPE	[UA test]
RFC3264-6-5			The "t=" line in the answer <b>MUST</b> equal that of the offer.	MUST	OUT OF SCOPE	[UA test]
RFC3264-6-6			If a stream is rejected, the offerer and answerer <b>MUST NOT</b> generate media (or RTCP packets) for that stream.	MUST NOT	OUT OF SCOPE	
RFC3264-6-7			To reject an offered stream, the port number in the corresponding stream in the answer <b>MUST</b> be set to zero.	MUST	OUT OF SCOPE	
RFC3264-6-8			At least one <b>MUST</b> be present, as specified by SDP.	MUST	OUT OF SCOPE	
RFC3264-6-9	6.1	Unicast Streams	If a stream is offered with a unicast address, the answer for that stream <b>MUST</b> contain a unicast address.	MUST	OUT OF SCOPE	
RFC3264-6-10			The media type of the stream in the answer <b>MUST</b> match that of the offer.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-6-11			If a stream is offered as sendonly, the corresponding stream <b>MUST</b> be marked as recvonly or inactive in the answer.	MUST	OUT OF SCOPE	
RFC3264-6-12			If a media stream is listed as recvonly in the offer, the answer <b>MUST</b> be marked as sendonly or inactive in the answer.	MUST	OUT OF SCOPE	
RFC3264-6-13			If an offered media stream is listed as inactive, it <b>MUST</b> be marked as inactive in the answer.	MUST	OUT OF SCOPE	
RFC3264-6-14			For streams marked as recvonly in the answer, the "m=" line <b>MUST</b> contain at least one media format the answerer is willing to receive with from amongst those listed in the offer.	MUST	OUT OF SCOPE	
RFC3264-6-15			For streams marked as sendonly in the answer, the "m=" line <b>MUST</b> contain at least one media format the answerer is willing to send from amongst those listed in the offer.	MUST	OUT OF SCOPE	
RFC3264-6-16			For streams marked as sendrecv in the answer, the "m=" line <b>MUST</b> contain at least one codec the answerer is willing to both send and receive, from amongst those listed in the offer.	MUST	OUT OF SCOPE	
RFC3264-6-17			This address and port <b>MUST</b> be present even for sendonly streams; in the case of RTP, the port one higher is still used to receive RTCP.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-6-18			In the case of RTP, if a particular codec was referenced with a specific payload type number in the offer, that same payload type number <b>SHOULD</b> be used for that codec in the answer.	SHOULD	OUT OF SCOPE	
RFC3264-6-19			Even if the same payload type number is used, the answer <b>MUST</b> contain rtpmap attributes to define the payload type mappings for dynamic payload types, and <b>SHOULD</b> contain mappings for static payload types.	MUST	OUT OF SCOPE	
RFC3264-6-20				SHOULD	OUT OF SCOPE	
RFC3264-6-21			The media formats in the "m=" line <b>MUST</b> be listed in order of preference, with the first format listed being preferred.	MUST	OUT OF SCOPE	
RFC3264-6-22			In this case, preferred means that the offerer <b>SHOULD</b> use the format with the highest preference from the answer.	SHOULD	OUT OF SCOPE	
RFC3264-6-23			Although the answerer <b>MAY</b> list the formats in their desired order of preference, it is <b>RECOMMENDED</b> that unless there is a specific reason, the answerer list formats in the same relative order they were present in the offer.	RECOMMENDED	OUT OF SCOPE	
RFC3264-6-24			In other words, if a stream in the offer lists audio codecs 8, 22 and 48, in that order, and the answerer only supports codecs 8 and 48, it is <b>RECOMMENDED</b> that, if the answerer has no reason to change it, the ordering of codecs in the answer be 8, 48, and not 48, 8.	RECOMMENDED	OUT OF SCOPE	
RFC3264-6-25			This means that the same fmp parameters with the same values <b>MUST</b> be present in the answer if the media format they describe is present in the answer.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-6-26			SDP extensions that define new parameters <b>SHOULD</b> specify the proper interpretation in offer/answer.	SHOULD	OUT OF SCOPE	
RFC3264-6-27			If the answerer has no media formats in common for a particular offered stream, the answerer <b>MUST</b> reject that media stream by setting the port to zero.	MUST	OUT OF SCOPE	
RFC3264-6-28			Once the answerer has sent the answer, it <b>MUST</b> be prepared to receive media for any recvonly streams described by that answer.	MUST	OUT OF SCOPE	
RFC3264-6-29			It <b>MUST</b> be prepared to send and receive media for any sendrecv streams in the answer, and it <b>MAY</b> send media immediately.	MUST	OUT OF SCOPE	
RFC3264-6-30			The answerer <b>MUST</b> be prepared to receive media for recvonly or sendrecv streams using any media formats listed for those streams in the answer, and it <b>MAY</b> send media immediately.	MUST	OUT OF SCOPE	
RFC3264-6-31			When sending media, it <b>SHOULD</b> use a packetization interval equal to the value of theptime attribute in the offer, if any was present.	SHOULD	OUT OF SCOPE	
RFC3264-6-32			It <b>SHOULD</b> send media using a bandwidth no higher than the value of the bandwidth attribute in the offer, if any was present.	SHOULD	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-6-33			The answerer <b>MUST</b> send using a media format in the offer that is also listed in the answer, and <b>SHOULD</b> send using the most preferred media format in the offer that is also listed in the answer.	MUST	OUT OF SCOPE	
RFC3264-6-34				SHOULD	OUT OF SCOPE	
RFC3264-6-35			In the case of RTP, it <b>MUST</b> use the payload type numbers from the offer, even if they differ from those in the answer.	MUST	OUT OF SCOPE	
RFC3264-6-36	6.2	Multicast Streams	If a multicast stream is accepted, the address and port information in the answer <b>MUST</b> match that of the offer.	MUST	OUT OF SCOPE	
RFC3264-6-37			Similarly, the directionality information in the answer (sendonly, recvonly, or sendrecv) <b>MUST</b> equal that of the offer.	MUST	OUT OF SCOPE	
RFC3264-6-38			The set of media formats in the answer <b>MUST</b> be equal to or be a subset of those in the offer.	MUST	OUT OF SCOPE	
RFC3264-6-39			The ptime and bandwidth attributes in the answer <b>MUST</b> equal the ones in the offer, if present.	MUST	OUT OF SCOPE	
RFC3264-7-1	7	Offerer Processing of the Answer	It <b>MUST</b> send using a media format listed in the answer, and it <b>SHOULD</b> use the first media format listed in the answer when it does send.	MUST	OUT OF SCOPE	
RFC3264-7-2				SHOULD	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-7-3			The reason this is a <b>SHOULD</b> , and not a <b>MUST</b> (its also a <b>SHOULD</b> , and not a <b>MUST</b> , for the answerer), is because there will oftentimes be a need to change codecs on the fly.	SHOULD	OUT OF SCOPE	
RFC3264-7-4				MUST	OUT OF SCOPE	
RFC3264-7-5				SHOULD	OUT OF SCOPE	
RFC3264-7-6				MUST	OUT OF SCOPE	
RFC3264-7-7			The offerer <b>SHOULD</b> send media according to the value of any ptime and bandwidth attribute in the answer.	SHOULD	OUT OF SCOPE	
RFC3264-8-1	8	Modifying the Session	When issuing an offer that modifies the session, the "o=" line of the new SDP <b>MUST</b> be identical to that in the previous SDP, except that the version in the origin field <b>MUST</b> increment by one from the previous SDP.	MUST	OUT OF SCOPE	[UA test]
RFC3264-8-2				MUST	OUT OF SCOPE	[UA test]
RFC3264-8-3			If the version in the origin line does not increment, the SDP <b>MUST</b> be identical to the SDP with that version number.	MUST	OUT OF SCOPE	
RFC3264-8-4			The answerer <b>MUST</b> be prepared to receive an offer that contains SDP with a version that has not changed; this is effectively a no-op.	MUST	OUT OF SCOPE	
RFC3264-8-5			However, the answerer <b>MUST</b> generate a valid answer (which <b>MAY</b> be the same as the previous SDP from the answerer, or <b>MAY</b> be different), according to the procedures defined in Section 6.	MUST	OUT OF SCOPE	
RFC3264-8-6			If an SDP is offered, which is different from the previous SDP, the new SDP <b>MUST</b> have a matching media stream for each media stream in the previous SDP.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-8-7			In other words, if the previous SDP had N "m=" lines, the new SDP <b>MUST</b> have at least N "m=" lines.	MUST	NOT REQUIRED	[UA test]
RFC3264-8-8			Deleted media streams from a previous SDP <b>MUST NOT</b> be removed in a new SDP;	MUST NOT	OUT OF SCOPE	
RFC3264-8-9	8.1	Adding a Media Stream	New media descriptions <b>MUST</b> appear below any existing media sections.	MUST	OUT OF SCOPE	
RFC3264-8-10	8.2	Removing a Media Stream	A stream that is offered with a port of zero <b>MUST</b> be marked with port zero in the answer.	MUST	OUT OF SCOPE	
RFC3264-8-11	8.3.1	Modifying Address, Port or Transport	If only the port number is to be changed, the rest of the media stream description <b>SHOULD</b> remain unchanged.	SHOULD	OUT OF SCOPE	
RFC3264-8-12			The offerer <b>MUST</b> be prepared to receive media on both the old and new ports as soon as the offer is sent.	MUST	OUT OF SCOPE	
RFC3264-8-13			The offerer <b>SHOULD NOT</b> cease listening for media on the old port until the answer is received and media arrives on the new port.	SHOULD NOT	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-8-14			If the updated stream is accepted by the answerer, the answerer <b>SHOULD</b> begin sending traffic for that stream to the new port immediately.	SHOULD	OUT OF SCOPE	
RFC3264-8-15			If the answerer changes the port from the previous SDP, it <b>MUST</b> be prepared to receive media on both the old and new ports as soon as the answer is sent.	MUST	OUT OF SCOPE	
RFC3264-8-16			The answerer <b>MUST NOT</b> cease listening for media on the old port until media arrives on the new port.	MUST NOT	OUT OF SCOPE	
RFC3264-8-17			The same is true for an offerer that sends an updated offer with a new port; it <b>MUST NOT</b> cease listening for media on the old port until media arrives on the new port.	MUST NOT	OUT OF SCOPE	
RFC3264-8-18	8.3.2	Changing the Set of Media Formats	However, in the case of RTP, the mapping from a particular dynamic payload type number to a particular codec within that media stream <b>MUST NOT</b> change for the duration of a session.	MUST NOT	OUT OF SCOPE	
RFC3264-8-19			For example, if A generates an offer with G.711 assigned to dynamic payload type number 46, payload type number 46 <b>MUST</b> refer to G.711 from that point forward in any offers or answers for that media stream within the session.	MUST	OUT OF SCOPE	
RFC3264-8-20			Similarly, as described in Section 6, as soon as it sends its answer, the answerer <b>MUST</b> begin sending media using any formats in the offer that were also present in the answer, and <b>SHOULD</b> use the most preferred format in the offer that was also listed in the answer (assuming the stream allows for sending), and <b>MUST NOT</b> send using any formats that are not in the offer, even if they were present in a previous SDP from the peer.	MUST	OUT OF SCOPE	
RFC3264-8-21				SHOULD	OUT OF SCOPE	
RFC3264-8-22				MUST NOT	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-8-23			Similarly, when the offerer receives the answer, it <b>MUST</b> begin sending media using any formats in the answer, and <b>SHOULD</b> use the most preferred one (assuming the stream allows for sending), and <b>MUST NOT</b> send using any formats that are not in the answer, even if they were present in a previous SDP from the peer.	MUST	OUT OF SCOPE	
RFC3264-8-24				SHOULD	OUT OF SCOPE	
RFC3264-8-25				MUST NOT	OUT OF SCOPE	
RFC3264-8-26	8.3.3	Changing Media Types	It is <b>RECOMMENDED</b> that the media type be changed (as opposed to adding a new stream), when the same logical data is being conveyed, but just in a different media format.	RECOMMENDED	OUT OF SCOPE	
RFC3264-8-27			Assuming the stream is acceptable, the answerer <b>SHOULD</b> begin sending with the new media type and formats as soon as it receives the offer. The offerer <b>MUST</b> be prepared to receive media with both the old and new types until the answer is received, and media with the new type is received and reaches the top of the playout buffer.	SHOULD	OUT OF SCOPE	
RFC3264-8-28				MUST	OUT OF SCOPE	
RFC3264-8-29	8.3.4	Changing Attributes	Generally, an agent <b>MUST</b> send media (if the directionality of the stream allows) using the new parameters once the SDP with the change is received.	MUST	OUT OF SCOPE	
RFC3264-8-30	8.4	Putting a Unicast Media Stream on Hold	The recipient of an offer for a stream on hold <b>SHOULD NOT</b> automatically return an answer with the corresponding stream on hold.	SHOULD NOT	OUT OF SCOPE	
RFC3264-8-31			Of course, when used, the port number <b>MUST NOT</b> be zero, which would specify that the stream has been disabled.	MUST NOT	OUT OF SCOPE	
RFC3264-8-32			An agent <b>MUST</b> be capable of receiving SDP with a connection address of 0.0.0.0, in which case it means that neither RTP nor RTCP should be sent to the peer.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-9-1	9	Indicating Capabilities	It <b>MUST</b> be a valid SDP, except that it <b>MAY</b> omit both "e=" and "p=" lines.	MUST	OUT OF SCOPE	
RFC3264-9-2			New media descriptions <b>MUST</b> appear below any existing media sections.	MUST	OUT OF SCOPE	
RFC3264-9-3			For each media type supported by the agent, there <b>MUST</b> be a corresponding media description of that type.	MUST	OUT OF SCOPE	
RFC3264-9-4			The session ID in the origin field <b>MUST</b> be unique for each SDP constructed to indicate media capabilities.	MUST	OUT OF SCOPE	
RFC3264-9-5			The port <b>MUST</b> be set to zero, but the connection address is arbitrary.	MUST	OUT OF SCOPE	
RFC3264-9-6			For each media format of that type supported by the agent, there <b>SHOULD</b> be a media format listed in the "m=" line.	SHOULD	OUT OF SCOPE	
RFC3264-9-7			In the case of RTP, if dynamic payload types are used, an rtpmap attribute <b>MUST</b> be present to bind the type to a specific format.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC3264-11-1	11	Security Considerations	Because of the attacks described above, that protocol <b>MUST</b> provide a means for end-to-end authentication and integrity protection of offers and answers.	MUST	OUT OF SCOPE	
RFC3264-11-2			It <b>SHOULD</b> offer encryption of bodies to prevent eavesdropping.	SHOULD	OUT OF SCOPE	
RFC3264-11-3			However, media injection attacks can alternatively be resolved through authenticated media exchange, and therefore the encryption requirement is a <b>SHOULD</b> instead of a <b>MUST</b> .	SHOULD	OUT OF SCOPE	
RFC3264-11-4				MUST	OUT OF SCOPE	
RFC3264-11-5			Therefore, the application protocol <b>MUST</b> provide a secure way to sequence offers and answers, and to detect and reject old offers or answers.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-4-1	4.1	Media and Transport Information	By default, this <b>SHOULD</b> be the remote address and remote port to which data is sent.	SHOULD	NOT REQUIRED	
RFC4566-4-2			Some media types may redefine this behaviour, but this is <b>NOT RECOMMENDED</b> since it complicates implementations (including middleboxes that must parse the addresses to open Network Address Translation (NAT) or firewall pinholes).	RECOMMENDED	NOT REQUIRED	
RFC4566-5-1	5	SDP Specification	An SDP session description consists of a number of lines of text of the form: <type>=<value> where <type> <b>MUST</b> be exactly one case-significant character and <value> is structured text whose format depends on <type>.	MUST	NOT REQUIRED	
RFC4566-5-2			Whitespace <b>MUST NOT</b> be used on either side of the "=" sign.	MUST NOT	NOT REQUIRED	
RFC4566-5-3			Some lines in each description are <b>REQUIRED</b> and some are <b>OPTIONAL</b> , but all <b>MUST</b> appear in exactly the order given here (the fixed order greatly enhances error detection and allows for a simple parser).	REQUIRED	NOT REQUIRED	
RFC4566-5-4				MUST	NOT REQUIRED	[UA test]
RFC4566-5-5			The set of type letters is deliberately small and not intended to be extensible – an SDP parser <b>MUST</b> completely ignore any session description that contains a type letter that it does not understand.	MUST	NOT REQUIRED	
RFC4566-5-6			An SDP parser <b>MUST</b> ignore any attribute it doesn't understand.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-5-7			The sequence CRLF (0x0d0a) is used to end a record, although parsers <b>SHOULD</b> be tolerant and also accept records terminated with a single newline character.	SHOULD	NOT REQUIRED	
RFC4566-5-8			If the "a=charset" attribute is not present, these octet strings <b>MUST</b> be interpreted as containing ISO-10646 characters in UTF-8 encoding (the presence of the "a=charset" attribute may force some fields to be interpreted differently).	MUST	NOT REQUIRED	
RFC4566-5-9			Any domain name used in SDP <b>MUST</b> comply with [1], [2].	MUST	NOT REQUIRED	
RFC4566-5-10			Internationalised domain names (IDNs) <b>MUST</b> be represented using the ASCII Compatible Encoding (ACE) form defined in [11] and <b>MUST NOT</b> be directly represented in UTF-8 or any other encoding (this requirement is for compatibility with RFC 2327 and other SDP-related standards, which predate the development of internationalised domain names).	MUST	NOT REQUIRED	
RFC4566-5-11				MUST NOT	NOT REQUIRED	
RFC4566-5-12	5.2	Origin ("o=")	The <username> <b>MUST NOT</b> contain spaces.	MUST NOT	NOT REQUIRED	
RFC4566-5-13			Again, it is <b>RECOMMENDED</b> that an NTP format timestamp is used.	RECOMMENDED	NOT REQUIRED	
RFC4566-5-14			For both IP4 and IP6, the fully qualified domain name is the form that <b>SHOULD</b> be given unless this is unavailable, in which case the globally unique address <b>MAY</b> be substituted.	SHOULD	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-5-15			A local IP address <b>MUST NOT</b> be used in any context where the SDP description might leave the scope in which the address is meaningful (for example, a local address <b>MUST NOT</b> be included in an application-level referral that might leave the scope).	MUST NOT	OUT OF SCOPE	
RFC4566-5-16				MUST NOT	OUT OF SCOPE	
RFC4566-5-17	5.3	Session Name ("s=")	There <b>MUST</b> be one and only one "s=" field per session description.	MUST	NOT REQUIRED	
RFC4566-5-18			The "s=" field <b>MUST NOT</b> be empty and <b>SHOULD</b> contain ISO 10646 characters (but see also the "a=charset" attribute).	MUST NOT	NOT REQUIRED	
RFC4566-5-19				SHOULD	NOT REQUIRED	
RFC4566-5-20			If a session has no meaningful name, the value "s=" <b>SHOULD</b> be used (i.e., a single space as the session name).	SHOULD	NOT REQUIRED	
RFC4566-5-21	5.4	Session Information ("i=")	There <b>MUST</b> be at most one session-level "i=" field per session description, and at most one "i=" field per media.	MUST	NOT REQUIRED	
RFC4566-5-22			If the "a=charset" attribute is not present, the "i=" field <b>MUST</b> contain ISO 10646 characters in UTF-8 encoding.	MUST	NOT REQUIRED	
RFC4566-5-23	5.5	URI ("u=")	This field is <b>OPTIONAL</b> , but if it is present it <b>MUST</b> be specified before the first media field.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-5-24	5.6	Email Address and Phone Number ("e=" and "p=")	Note that the previous version of SDP specified that either an email field or a phone field <b>MUST</b> be specified, but this was widely ignored.	MUST	NOT REQUIRED	
RFC4566-5-25			If an email address or phone number is present, it <b>MUST</b> be specified before the first media field.	MUST	NOT REQUIRED	
RFC4566-5-26			Phone numbers <b>SHOULD</b> be given in the form of an international public telecommunication number (see ITU-T Recommendation E.164) preceded by a "+".	SHOULD	NOT REQUIRED	
RFC4566-5-27			This <b>MUST</b> be enclosed in parentheses if it is present.	MUST	NOT REQUIRED	
RFC4566-5-28			The free text string <b>SHOULD</b> be in the ISO-10646 character set with UTF-8 encoding, or alternatively in ISO-8859-1 or other encodings if the appropriate session-level "a=charset" attribute is set.	SHOULD	NOT REQUIRED	
RFC4566-5-29	5.7	Connection Data ("c=")	A session description <b>MUST</b> contain either at least one "c=" field in each media description or a single "c=" field at the session level.	MUST	NOT REQUIRED	
RFC4566-5-30			Sessions using an IPv4 multicast connection address <b>MUST</b> also have a time to live (TTL) value present in addition to the multicast address.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-5-31			TTL values <b>MUST</b> be in the range 0-255.	MUST	NOT REQUIRED	
RFC4566-5-32			Although the TTL <b>MUST</b> be specified, its use to scope multicast traffic is deprecated;	MUST	NOT REQUIRED	
RFC4566-5-33			applications <b>SHOULD</b> use an administratively scoped address instead.	SHOULD	NOT REQUIRED	
RFC4566-5-34			IPv6 multicast does not use TTL scoping, and hence the TTL value <b>MUST NOT</b> be present for IPv6 multicast.	MUST NOT	NOT REQUIRED	
RFC4566-5-35			They <b>MUST NOT</b> be specified for a session-level "c=" field.	MUST NOT	NOT REQUIRED	
RFC4566-5-36			The slash notation for multiple addresses described above <b>MUST NOT</b> be used for IP unicast addresses.	MUST NOT	NOT REQUIRED	
RFC4566-5-37	5.8	Bandwidth ("b=")	CT If the bandwidth of a session or media in a session is different from the bandwidth implicit from the scope, a "b=CT:..." line <b>SHOULD</b> be supplied for the session giving the proposed upper limit to the bandwidth used (the "conference total" bandwidth).	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-5-38			b=X-YZ:128 Use of the "X-" prefix is <b>NOT RECOMMENDED</b> : instead new modifiers <b>SHOULD</b> be registered with IANA in the standard namespace.	RECOMMENDED	NOT REQUIRED	
RFC4566-5-39				SHOULD	NOT REQUIRED	
RFC4566-5-40			SDP parsers <b>MUST</b> ignore bandwidth fields with unknown modifiers.	MUST	NOT REQUIRED	
RFC4566-5-41			Modifiers <b>MUST</b> be alphanumeric and, although no length limit is given, it is recommended that they be short.	MUST	NOT REQUIRED	
RFC4566-5-42	5.9	Timing ("t=")	Since SDP uses an arbitrary length decimal representation, this should not cause an issue (SDP timestamps <b>MUST</b> continue counting seconds since 1900, NTP will use the value modulo the 64-bit limit).	MUST	NOT REQUIRED	
RFC4566-5-43			User interfaces <b>SHOULD</b> strongly discourage the creation of unbounded and permanent sessions as they give no information about when the session is actually going to terminate, and so make scheduling difficult.	SHOULD	NOT REQUIRED	
RFC4566-5-44			If behaviour other than this is required, an end-time <b>SHOULD</b> be given and modified as appropriate when new information becomes available about when the session should really end.	SHOULD	NOT REQUIRED	
RFC4566-5-45	5.12	Encryption Keys ("k=")	A simple mechanism for key exchange is provided by the key field ("k="), although this is primarily supported for compatibility with older implementations and its use is <b>NOT RECOMMENDED</b> .	RECOMMENDED	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-5-46			If there is a need to convey this information within SDP, the extensions mentioned previously <b>SHOULD</b> be used.	SHOULD	NOT REQUIRED	
RFC4566-5-47			This method <b>MUST NOT</b> be used unless it can be guaranteed that the SDP is conveyed over a secure channel.	MUST NOT	NOT REQUIRED	
RFC4566-5-48			This method <b>MUST NOT</b> be used unless it can be guaranteed that the SDP is conveyed over a secure channel.	MUST NOT	NOT REQUIRED	
RFC4566-5-49			The use of user-specified keys is <b>NOT RECOMMENDED</b> , since such keys tend to have weak security properties.	RECOMMENDED	NOT REQUIRED	
RFC4566-5-50			The key field <b>MUST NOT</b> be used unless it can be guaranteed that the SDP is conveyed over a secure and trusted channel.	MUST NOT	NOT REQUIRED	
RFC4566-5-51	5.13	Attributes ("a=")	Attribute names <b>MUST</b> use the US-ASCII subset of ISO-10646/UTF-8.	MUST	NOT REQUIRED	
RFC4566-5-52			Attributes <b>MUST</b> be registered with IANA (see Section 8).	MUST	NOT REQUIRED	
RFC4566-5-53			If an attribute is received that is not understood, it <b>MUST</b> be ignored by the receiver.	MUST	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-5-54	5.14	Media Descriptions ("m=")	If non-contiguous ports are used or if they don't follow the parity rule of even RTP ports and odd RTCP ports, the "a=rtcp:" attribute <b>MUST</b> be used.	MUST	OUT OF SCOPE	
RFC4566-5-55			Applications that are requested to send media to a <port> that is odd and where the "a=rtcp:" is present <b>MUST NOT</b> subtract 1 from the RTP port: that is, they <b>MUST</b> send the RTP to the port indicated in <port> and send the RTCP to the port indicated in the "a=rtcp" attribute.	MUST NOT	OUT OF SCOPE	
RFC4566-5-56				MUST	OUT OF SCOPE	
RFC4566-5-57			When a list of payload type numbers is given, this implies that all of these payload formats <b>MAY</b> be used in the session, but the first of these formats <b>SHOULD</b> be used as the default format for the session.	SHOULD	NOT REQUIRED	
RFC4566-5-58			For dynamic payload type assignments the "a=rtpmap:" attribute (see Section 6) <b>SHOULD</b> be used to map from an RTP payload type number to a media encoding name that identifies the payload format.	SHOULD	NOT REQUIRED	
RFC4566-5-59			If the <proto> sub-field is "udp" the <fmt> sub-fields <b>MUST</b> reference a media type describing the format under the "audio", "video", "text", "application", or "message" top-level media types.	MUST	NOT REQUIRED	
RFC4566-5-60			The media type registration <b>SHOULD</b> define the packet format for use with UDP transport.	SHOULD	NOT REQUIRED	
RFC4566-5-61			Rules for interpretation of the <fmt> sub-field <b>MUST</b> be defined when registering new protocols (see Section 8.2.2).	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-6-1	6	SDP Attributes	The time <b>SHALL</b> be calculated as the sum of the time the media present in the packet represents.	SHALL	NOT REQUIRED	
RFC4566-6-2			For frame-based codecs, the time <b>SHOULD</b> be an integer multiple of the frame size.	SHOULD	NOT REQUIRED	
RFC4566-6-3			RTP profiles that specify the use of dynamic payload types <b>MUST</b> define the set of valid encoding names and/or a means to register encoding names if that profile is to be used with SDP.	MUST	NOT REQUIRED	
RFC4566-6-4			Additional encoding parameters <b>MAY</b> be defined in the future, but codec-specific parameters <b>SHOULD NOT</b> be added.	SHOULD NOT	OUT OF SCOPE	
RFC4566-6-5			Parameters added to an "a=rtptime:" attribute <b>SHOULD</b> only be those required for a session directory to make the choice of appropriate media to participate in a session.	SHOULD	OUT OF SCOPE	
RFC4566-6-6			Note that recvonly applies to the media only, not to any associated control protocol (e.g., an RTP-based system in recvonly mode <b>SHOULD</b> still send RTCP packets).	SHOULD	NOT REQUIRED	
RFC4566-6-7			If none of the attributes "sendonly", "recvonly", "inactive", and "sendrecv" is present, "sendrecv" <b>SHOULD</b> be assumed as the default for sessions that are not of the conference type "broadcast" or "H332" (see below).	SHOULD	NOT REQUIRED	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-6-8			Note that sendonly applies only to the media, and any associated control protocol (e.g., RTCP) <b>SHOULD</b> still be received and processed as normal.	SHOULD	OUT OF SCOPE	
RFC4566-6-9			Note that an RTP-based system <b>SHOULD</b> still send RTCP, even if started inactive.	SHOULD	NOT REQUIRED	
RFC4566-6-10			The charset specified <b>MUST</b> be one of those registered with IANA, such as ISO-8859-1.	MUST	NOT REQUIRED	
RFC4566-6-11			The character set identifier is a US-ASCII string and <b>MUST</b> be compared against the IANA identifiers using a case-insensitive comparison.	MUST	NOT REQUIRED	
RFC4566-6-12			If the identifier is not recognised or not supported, all strings that are affected by it <b>SHOULD</b> be regarded as octet strings.	SHOULD	OUT OF SCOPE	
RFC4566-6-13			Note that a character set specified <b>MUST</b> still prohibit the use of bytes 0x00 (Nul), 0x0A (LF), and 0x0d (CR).	MUST	NOT REQUIRED	
RFC4566-6-14			Character sets requiring the use of these characters <b>MUST</b> define a quoting mechanism that prevents these bytes from appearing within text fields.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-6-15			Instead, multiple descriptions <b>SHOULD</b> be sent describing the session, one in each language.	SHOULD	OUT OF SCOPE	
RFC4566-6-16			However, this is not possible with all transport mechanisms, and so multiple sdplang attributes are allowed although <b>NOT RECOMMENDED</b> .	RECOMMENDED	OUT OF SCOPE	
RFC4566-6-17			An "sdplang" attribute <b>SHOULD</b> be specified when a session is of sufficient scope to cross geographic boundaries where the language of recipients cannot be assumed, or where the session is in a different language from the locally assumed norm.	SHOULD	OUT OF SCOPE	
RFC4566-6-18			A "lang" attribute <b>SHOULD</b> be specified when a session is of sufficient scope to cross geographic boundaries where the language of recipients cannot be assumed, or where the session is in a different language from the locally assumed norm.	SHOULD	OUT OF SCOPE	
RFC4566-7-1	7	Security Considerations	Entities receiving and acting upon an SDP message <b>SHOULD</b> be aware that a session description cannot be trusted unless it has been obtained by an authenticated transport protocol from a known and trusted source.	SHOULD	OUT OF SCOPE	
RFC4566-7-2			In case a session description has not been obtained in a trusted manner, the endpoint <b>SHOULD</b> exercise care because, among other attacks, the media sessions received may not be the intended ones, the destination where media is sent to may not be the expected one, any of the parameters of the session may be incorrect, or the media security may be compromised.	SHOULD	OUT OF SCOPE	
RFC4566-7-3			Software that parses a session description <b>MUST NOT</b> be able to start other software except that which is specifically configured as appropriate software to participate in multimedia sessions.	MUST NOT	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-7-4			Thus, a session description arriving by session announcement, email, session invitation, or WWW page <b>MUST NOT</b> deliver the user into an interactive multimedia session unless the user has explicitly pre-authorized such action.	MUST NOT	OUT OF SCOPE	
RFC4566-7-5			If this is done, an application parsing a session description containing such attributes <b>SHOULD</b> either ignore them or inform the user that joining this session will result in the automatic transmission of multimedia data.	SHOULD	OUT OF SCOPE	
RFC4566-7-6			These behaviours are <b>NOT RECOMMENDED</b> unless the session description is conveyed in such a manner that allows the intermediary system to conduct proper checks to establish the authenticity of the session description, and the authority of its source to establish such communication sessions.	RECOMMENDED	OUT OF SCOPE	
RFC4566-7-7			SDP <b>MUST NOT</b> be used to convey key material, unless it can be guaranteed that the channel over which the SDP is delivered is both private and authenticated.	MUST NOT	NOT REQUIRED	
RFC4566-7-8			The use of the "k=" line is <b>NOT RECOMMENDED</b> , as discussed in Section 5.12.	RECOMMENDED	NOT REQUIRED	
RFC4566-8-1	8.2.1	Media Types ("media")	The set of media types is intended to be small and <b>SHOULD NOT</b> be extended except under rare circumstances.	SHOULD NOT	OUT OF SCOPE	
RFC4566-8-2			For media other than existing top-level media content types, a Standards Track RFC <b>MUST</b> be produced for a new top-level content type to be registered, and the registration <b>MUST</b> provide good justification why no existing media name is appropriate (the "Standards Action" policy of RFC 2434 [8]).	MUST	OUT OF SCOPE	
RFC4566-8-3				MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-8-4			If these media types are considered useful in the future, a Standards Track RFC <b>MUST</b> be produced to document their use.	MUST	OUT OF SCOPE	
RFC4566-8-5			Until that is done, applications <b>SHOULD NOT</b> use these types and <b>SHOULD NOT</b> declare support for them in SIP capabilities declarations (even though they exist in the registry created by RFC 3840).	SHOULD NOT	OUT OF SCOPE	
RFC4566-8-6				SHOULD NOT	OUT OF SCOPE	
RFC4566-8-7	8.2.2	Transport Protocols ("proto")	This <b>SHOULD</b> reference a standards-track protocol RFC.	SHOULD	OUT OF SCOPE	
RFC4566-8-8			If other RTP profiles are defined in the future, their "proto" name <b>SHOULD</b> be specified in the same manner.	SHOULD	OUT OF SCOPE	
RFC4566-8-9			New transport protocols <b>SHOULD</b> be registered with IANA.	SHOULD	OUT OF SCOPE	
RFC4566-8-10			Registrations <b>MUST</b> reference an RFC describing the protocol.	MUST	OUT OF SCOPE	
RFC4566-8-11			Registrations <b>MUST</b> also define the rules by which their "fmt" namespace is managed (see below).	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-8-12	8.2.3	Media Formats ("fmt")	RTP payload formats under the "RTP/AVP" and "RTP/SAVP" profiles <b>MUST</b> use the payload type number as their "fmt" value.	MUST	OUT OF SCOPE	
RFC4566-8-13			If the payload type number is dynamically assigned by this session description, an additional "rtpmap" attribute <b>MUST</b> be included to specify the format name and parameters as defined by the media type registration for the payload format.	MUST	OUT OF SCOPE	
RFC4566-8-14			It is <b>RECOMMENDED</b> that other RTP profiles that are registered (in combination with RTP) as SDP transport protocols specify the same rules for the "fmt" namespace.	RECOMMENDED	OUT OF SCOPE	
RFC4566-8-15			For the "udp" protocol, new formats <b>SHOULD</b> be registered.	SHOULD	OUT OF SCOPE	
RFC4566-8-16			If no media subtype exists, it is <b>RECOMMENDED</b> that a suitable one be registered through the IETF process [31] by production of, or reference to, a standards-track RFC that defines the transport protocol for the format.	RECOMMENDED	OUT OF SCOPE	
RFC4566-8-17			Registrations of new formats <b>MUST</b> specify which transport protocols they apply to.	MUST	OUT OF SCOPE	
RFC4566-8-18	8.2.4	Attribute Names ("att-field")	Attribute field names ("att-field") <b>MUST</b> be registered with IANA and documented, because of noticeable issues due to conflicting attributes under the same name.	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-8-19			Attributes that are expected to see widespread use and interoperability <b>SHOULD</b> be documented with a standards-track RFC that specifies the attribute more precisely.	SHOULD	OUT OF SCOPE	
RFC4566-8-20	8.2.5	Bandwidth Specifiers ("bwtype")	New bandwidth specifiers ("bwtype" fields) <b>MUST</b> be registered with IANA.	MUST	OUT OF SCOPE	
RFC4566-8-21			The submission <b>MUST</b> reference a standards-track RFC specifying the semantics of the bandwidth specifier precisely, and indicating when it should be used, and why the existing registered bandwidth specifiers do not suffice.	MUST	OUT OF SCOPE	
RFC4566-8-22	8.2.6	Network Types ("nettype")	A new network type registration <b>MUST</b> reference an RFC that gives details of the network type and address type and specifies how and when they would be used.	MUST	OUT OF SCOPE	
RFC4566-8-23	8.2.7	Address Types ("addrtype")	An address type is only meaningful in the context of a network type, and any registration of an address type <b>MUST</b> specify a registered network type or be submitted along with a network type registration.	MUST	OUT OF SCOPE	
RFC4566-8-24			A new address type registration <b>MUST</b> reference an RFC giving details of the syntax of the address type.	MUST	OUT OF SCOPE	
RFC4566-8-25	8.2.8	Registration Procedure	In the RFC documentation that registers SDP "media", "proto", "fmt", "bwtype", "nettype", and "addrtype" fields, the authors <b>MUST</b> include the following information for IANA to place in the appropriate registry:	MUST	OUT OF SCOPE	

No	RFC Section	RFC Section Title	Functional Specification	RFC Status	Test Priority	Test Profile
RFC4566-8-26	8.3	Encryption Key Access Methods	New registrations <b>MUST NOT</b> be accepted.	MUST NOT	OUT OF SCOPE
